

MDS140L

140 Watts, 50 Volts

Pulsed Avionics 1030 to 1090 MHz

GENERAL DESCRIPTION

The MDS140L is a high power COMMON BASE bipolar transistor. It is designed for MODE-S ELM systems in the frequency band 1030-1090 MHz. The device has gold thin-film metallization and diffused ballasting for proven highest MTTF. The transistor includes input and output prematch for broadband capability. Low thermal resistance package reduces junction temperature, extends life.
