

## FEATURES

- Member of the Texas Instruments Widebus™ Family
- UBT™ Transceiver Combines D-Type Latches and D-Type Flip-Flops for Operation in Transparent, Latched, Clocked, or Clock-Enabled Modes
- OEC™ Circuitry Improves Signal Integrity and Reduces Electromagnetic Interference
- GTL Buffered CLKAB Signal (CLKOUT)
- Translates Between GTL/GTL+ Signal Levels and LVTTTL Logic Levels
- Supports Mixed-Mode (3.3 V and 5 V) Signal Operation on A-Port and Control Inputs
- Equivalent to '16601 Function
- I<sub>off</sub> Supports Partial-Power-Down Mode Operation
- Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors on A Port
- Distributed V<sub>CC</sub> and GND Pins Minimize High-Speed Switching Noise
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)

## DESCRIPTION/ORDERING INFORMATION

The SN74GTL16616 is a 17-bit UBT™ transceiver that provides LVTTTL-to-GTL/GTL+ and GTL/GTL+-to-LVTTTL signal-level translation. Combined D-type flip-flops and D-type latches allow for transparent, latched, clocked, and clocked-enabled modes of data transfer identical to the '16601 function. Additionally, this device provides for a copy of CLKAB at GTL/GTL+ signal levels (CLKOUT) and conversion of a GTL/GTL+ clock to LVTTTL logic levels (CLKIN). This device provides an interface between cards operating at LVTTTL logic levels and a backplane operating at GTL/GTL+ signal levels. Higher-speed operation is a direct result of the reduced output swing (<1 V), reduced input threshold levels, and OEC™ circuitry.

### ORDERING INFORMATION

T <sub>A</sub>	PACKAGE <sup>(1)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	SSOP – DL	Tube	SN74GTL16616DL	GTL16616
		Tape and reel	SN74GTL16616DLR	GTL16616

SCBS481H–JUNE 1994–REVISED APRIL 2005

**DESCRIPTION/ORDERING INFORMATION (CONTINUED)**

The user has the flexibility of using this device at either GTL ( $V_{TT} = 1.2\text{ V}$  and  $V_{REF} = 0.8\text{ V}$ ) or the preferred higher noise margin GTL+ ( $V_{TT} = 1.5\text{ V}$  and  $V_{REF} = 1\text{ V}$ ) signal levels. GTL+ is the Texas Instruments derivative of the Gunning Transceiver Logic (GTL) JEDEC standard JESD 8-3. The B port normally operates at GTL or GTL+ signal levels, while the A-port and control inputs are compatible with LVTTTL logic levels and are 5-V tolerant.  $V_{REF}$  is the reference input voltage for the B port.  $V_{CC}$  (5 V) supplies the internal and GTL circuitry, while  $V_{CC}$  (3.3 V) supplies the LVTTTL output buffers.

Data flow in each direction is controlled by output-enable ( $\overline{OEAB}$  and  $\overline{OEBA}$ ), latch-enable ( $LEAB$  and  $LEBA$ ), and clock ( $CLKAB$  and  $CLKBA$ ) inputs. The clock can be controlled by the clock-enable ( $\overline{CEAB}$  and  $\overline{CEBA}$ ) inputs. For A-to-B data flow, the device operates in the transparent mode when  $LEAB$  is high. When  $LEAB$  is low, the A data is latched if  $\overline{CEAB}$  is low and  $CLKAB$  is held at a high or low logic level. If  $LEAB$  is low, the A-bus data is stored in the latch/flip-flop on the low-to-high transition of  $CLKAB$  if  $\overline{CEAB}$  also is low. When  $\overline{OEAB}$  is low, the outputs are active. When  $\overline{OEAB}$  is high, the outputs are in the high-impedance state. Data flow for B to A is similar to that of A to B, but uses  $\overline{OEBA}$ ,  $LEBA$ ,  $CLKBA$ , and  $\overline{CEBA}$ .

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

Active bus-hold circuitry holds unused or undriven LVTTTL inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

**FUNCTION TABLE<sup>(1)</sup>**

INPUTS					OUTPUT B	MODE
$\overline{CEAB}$	$\overline{OEAB}$	$LEAB$	$CLKAB$	A		
X	H	X	X	X	Z	Isolation
L	L	L	H	X	$B_0^{(2)}$	Latched storage of A data
L	L	L	L	X	$B_0^{(3)}$	
X	L	H	X	L	L	Transparent
X	L	H	X	H	H	
L	L	L	↑	L	L	Clocked storage of A data
L	L	L	↑	H	H	
H	L	L	X	X	$B_0^{(3)}$	Clock inhibit

(1) A-to-B data flow is shown. B-to-A data flow is similar, but uses  $\overline{OEBA}$ ,  $LEBA$ ,  $CLKBA$ , and  $\overline{CEBA}$ . The condition when  $\overline{OEAB}$  and  $\overline{OEBA}$  are both low at the same time is not recommended.

(2) Output level before the indicated steady-state input conditions were established, provided that  $CLKAB$  was high before  $LEAB$  went low

(3) Output level before the indicated steady-state input conditions were established

## 17-BIT LVTTTL-TO-GTL/GTL+ UNIVERSAL BUS TRANSCEIVER WITH BUFFERED CLOCK OUTPUTS

SCBS481H–JUNE 1994–REVISED APRIL 2005

### Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage range	3.3 V	-0.5	4.6	V
		5 V	-0.5	7	
V <sub>I</sub>	Input voltage range <sup>(2)</sup>	A-port and control inputs	-0.5	7	V
		B port and V <sub>REF</sub>	-0.5	4.6	
V <sub>O</sub>	Voltage range applied to any output in the high or power-off state <sup>(2)</sup>	A port	-0.5	7	V
		B port	-0.5	4.6	
I <sub>O</sub>	Current into any output in the low state	A port		128	mA
		B port		80	
I <sub>O</sub>	Current into any A-port output in the high state <sup>(3)</sup>			64	mA
	Continuous current through each V <sub>CC</sub> or GND			±100	mA
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0		-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0		-50	mA
θ <sub>JA</sub>	Package thermal impedance <sup>(4)</sup>	DGG package		64	°C/W
		DL package		56	
T <sub>stg</sub>	Storage temperature range		-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (3) This current flows only when the output is in the high state and V<sub>O</sub> > V<sub>CC</sub>.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

### Recommended Operating Conditions<sup>(1)(2)(3)(4)</sup>

			MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage	3.3 V	3.15	3.3	3.45	V
		5 V	4.75	5	5.25	
V <sub>TT</sub>	Termination voltage	GTL	1.14	1.2	1.26	V
		GTL+	1.35	1.5	1.65	
V <sub>REF</sub>	Reference voltage	GTL	0.74	0.8	0.87	V
		GTL+	0.87	1	1.1	
V <sub>I</sub>	Input voltage	B port			V <sub>TT</sub>	V
		Except B port			5.5	
V <sub>IH</sub>	High-level input voltage	B port	V <sub>REF</sub> + 50 mV			V
		Except B port	2			
V <sub>IL</sub>	Low-level input voltage	B port	V <sub>REF</sub> - 50 mV			V
		Except B port			0.8	
I <sub>IK</sub>	Input clamp current				-18	mA
I <sub>OH</sub>	High-level output current	A port			-32	mA
I <sub>OL</sub>	Low-level output current	A port			64	mA
		B port			40	
T <sub>A</sub>	Operating free-air temperature		-40		85	°C

- (1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.
- (2) Normal connection sequence is GND first, V<sub>CC</sub> = 5 V second, and V<sub>CC</sub> = 3.3 V, I/O, control inputs, V<sub>TT</sub> and V<sub>REF</sub> (any order) last.
- (3) V<sub>TT</sub> and R<sub>TT</sub> can be adjusted to accommodate backplane impedances if the dc recommended I<sub>OL</sub> ratings are not exceeded.
- (4) V<sub>REF</sub> can be adjusted to optimize noise margins, but normally is two-thirds V<sub>TT</sub>.

## Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS			MIN	TYP <sup>(1)</sup>	MAX	UNIT

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74GTL16616DLR	ACTIVE	SSOP	DL	56	1000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	GTL16616	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale ([www.ti.com/legal/termsofsale.html](http://www.ti.com/legal/termsofsale.html)) or other applicable terms available either on [ti.com](http://ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
