

9-BIT SHIFT REGISTER

**SY10E142
SY100E142**

- 700MHz min. shift frequency
- Extended 100E VEE range of -4.2V to -5.5V
- 9 bits wide for byte-parity applications
- Asynchronous Master Reset
- Dual clocks
- Fully compatible with industry standard 10KH, 100K ECL levels
- Internal 75KΩ input pulldown resistors
- Fully compatible with Motorola MC10E/100E142
- Available in 28-pin PLCC package

The SY10/100E142 are high-speed 9-bit shift registers designed for use in new, high-performance ECL systems. The E142 can accept serial or parallel data to be shifted out in one direction as both serial and parallel outputs. The nine inputs, D₀-D₈, accept parallel input data, while S-IN accepts serial input data.

The SEL (Select) control pin serves to determine the mode of operation, either SHIFT or LOAD. The shift direction is from bit 0 to bit 8. The input data has to meet the set-up time before being clocked into the nine input registers on the rising edge of CLK₁ or CLK₂. Shifting is also performed on the rising edge of either CLK₁ or CLK₂. The MR (Master Reset) control signal asynchronously resets all nine registers to a logic LOW when a logic HIGH is applied to MR.

The E142 is designed for applications such as diagnostic scan registers, parallel-to-serial conversions and is also suitable for byte-wide parity.

Pin Function Table

Pin	Function
D ₀ -D ₈	Parallel Data Inputs
S-IN	Serial Data Input
SEL	Mode Select Input
CLK ₁ , CLK ₂	Clock Inputs
MR	Master Reset
Q ₀ -Q ₈	Data Outputs
V _{CCO}	V _{CC} to Output

28-Pin PLCC (J28-1)

SY100E142JZTR ^(2, 3)	J28-1	Commercial	SY100E142JZ with Pb-Free bar-line indicator	Matte-Sn

Notes:

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^\circ\text{C}$, DC Electricals only.
2. Tape and Reel.
3. Pb-Free package is recommended for new designs.
