DESCRIPTION

The SY88922 is a high-speed current switch for driving a semiconductor laser diode in optical transmission applications. The output current, or modulation current I_{MOD} , is DC current controlled by I_{RSET} , current through the resistor R_{SET} . The output OUT is HIGH when output enable is HIGH.

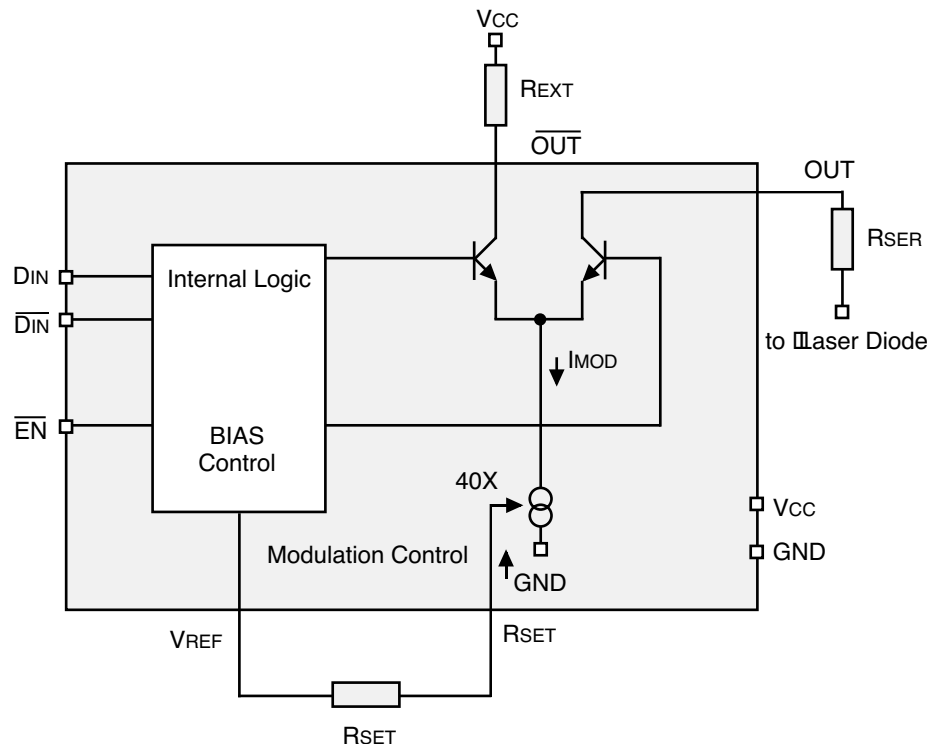

The device incorporates complementary open collector outputs with a capability of driving peak current of 25mA. The resistor R_{EXT} must be placed between \overline{OUT} and V_{CC} to dissipate the worst case power. R_{SER} is recommended to compensate for laser diode matching issues.

The SY88922 utilizes the high performance bipolar ASSET™ technology.

APPLICATIONS

- 1.25Gbps Gigabit Ethernet
- 531Mbps and 1062Mbps Fibre Channel
- 622Mbps SONET
- Gigabit Interface Converter
- 2.5Gb/s SDH/SONET
