

Self-Adjusting Wire Strippers

TOL-14872

Let's face it, wire strippers can be problematic to use if you aren't sure what you're doing and it could result in you accidentally wasting material. Lucky for you, there is this Self-Adjusting Wire Stripper that can take almost any wire, place it in the head of the tool, compress the handles, and you will have a perfectly stripped wire every time. This Self-Adjusting Wire Stripper also doubles as a wire cutter and triples as an insulated and non-insulated crimper as well!

Although these wire strippers are rated for 10-24AWG, they do feature an adjustable swivel knob to strip wire smaller than 24AWG making them ideal to have as part of your workbench or tool box, regardless of if you are a maker, technician, or homeowner.
