

dsPIC33CK64MP105 Motor Control Plug-In Module (PIM) Information Sheet for Internal Op Amp Configuration

The dsPIC33CK64MP105 Motor Control PIM for Internal Op Amp Motor Configuration (P/N: MA330050-2) is designed to demonstrate the motor control capabilities of the dsPIC33CK64MP105 device using internal op amps available on the device.

The dsPIC33CK64MP105 device is a high-performance, 16-bit Digital Signal Controller (DSC). This Motor Control PIM is designed to take advantage of the high-resolution PWM (with fine edge placement) peripheral on the device. The PWM, along with other peripherals, such as the ADC, enable motor control applications.

The PIM can be used to demonstrate and develop motor control applications by inserting it in the 100-pin PIM interface header provided on the compatible motor control development boards (see [Table 1](#)). The PIM is designed to run a single motor with all the compatible development boards. When operating this PIM on the dsPICDEM™ MCLV-2 Development Board, insert an internal op amp configuration matrix board (see [Figure 2](#)) on the J14 header provided on the board. In the case of dsPICDEM MCHV-2/MCHV-3 Development Boards, insert an internal op amp configuration matrix board on to the J4 header (as shown in [Figure 2](#)) on the board. This PIM can be used on the dsPICDEM MCHV-3 Development Board to implement and demonstrate single-stage boost Power Factor Correction (PFC) control, along with field-oriented control.

For additional information regarding development boards, refer to the respective user's guides available on the Microchip website (www.microchip.com).

FIGURE 1: dsPIC33CK64MP105 MOTOR CONTROL PIM FOR INTERNAL OP AMP (P/N: MA330050-2)

[Table 1](#) provides information on the hardware versions of the motor control boards that are compatible with this PIM. Refer to the specific motor control board user's guide for the hardware version identification information.

FIGURE 2: INTERNAL OP AMP CONFIGURATION BOARD

dsPIC33CK64MP105

TABLE 1: HARDWARE COMPATIBILITY

Development Board	Part Number	Compatible Hardware Version(s)
dsPICDEM™ MCHV Development Board	DM330023	Not Compatible
dsPICDEM MCLV Development Board	DM330021	Not Compatible
Low-Voltage Motor Control Development Bundle	DV330100	Not Compatible
dsPICDEM MCLV-2 Development Board	DM330021-2	All Revisions
dsPICDEM MCHV-2 Development Board	DM330023-2	All Revisions
dsPICDEM MCHV-3 Development Board	DM330023-3	All Revisions

WARNING

Do not connect non-isolated oscilloscope probes to the test points on the PIM while in use with the dsPICDEM™ MCHV-2 or MCHV-3 Development Board. Failure to heed this warning could result in hardware damage.

dsPIC33CK64MP105

Table 2 provides mapping between the 48-pin device and the 100-pin PIM.

TABLE 2: DEVICE TO PIM MAPPING (SORTED BY DEVICE PIN NUMBER)

Device Pin #	PIM Pin #	dsPIC33CK64MP105 Device Functional Description	Remarks

dsPIC33CK64MP105

Table 4 classifies the passive components according to their functionality and quotes the design equations applicable in each case.

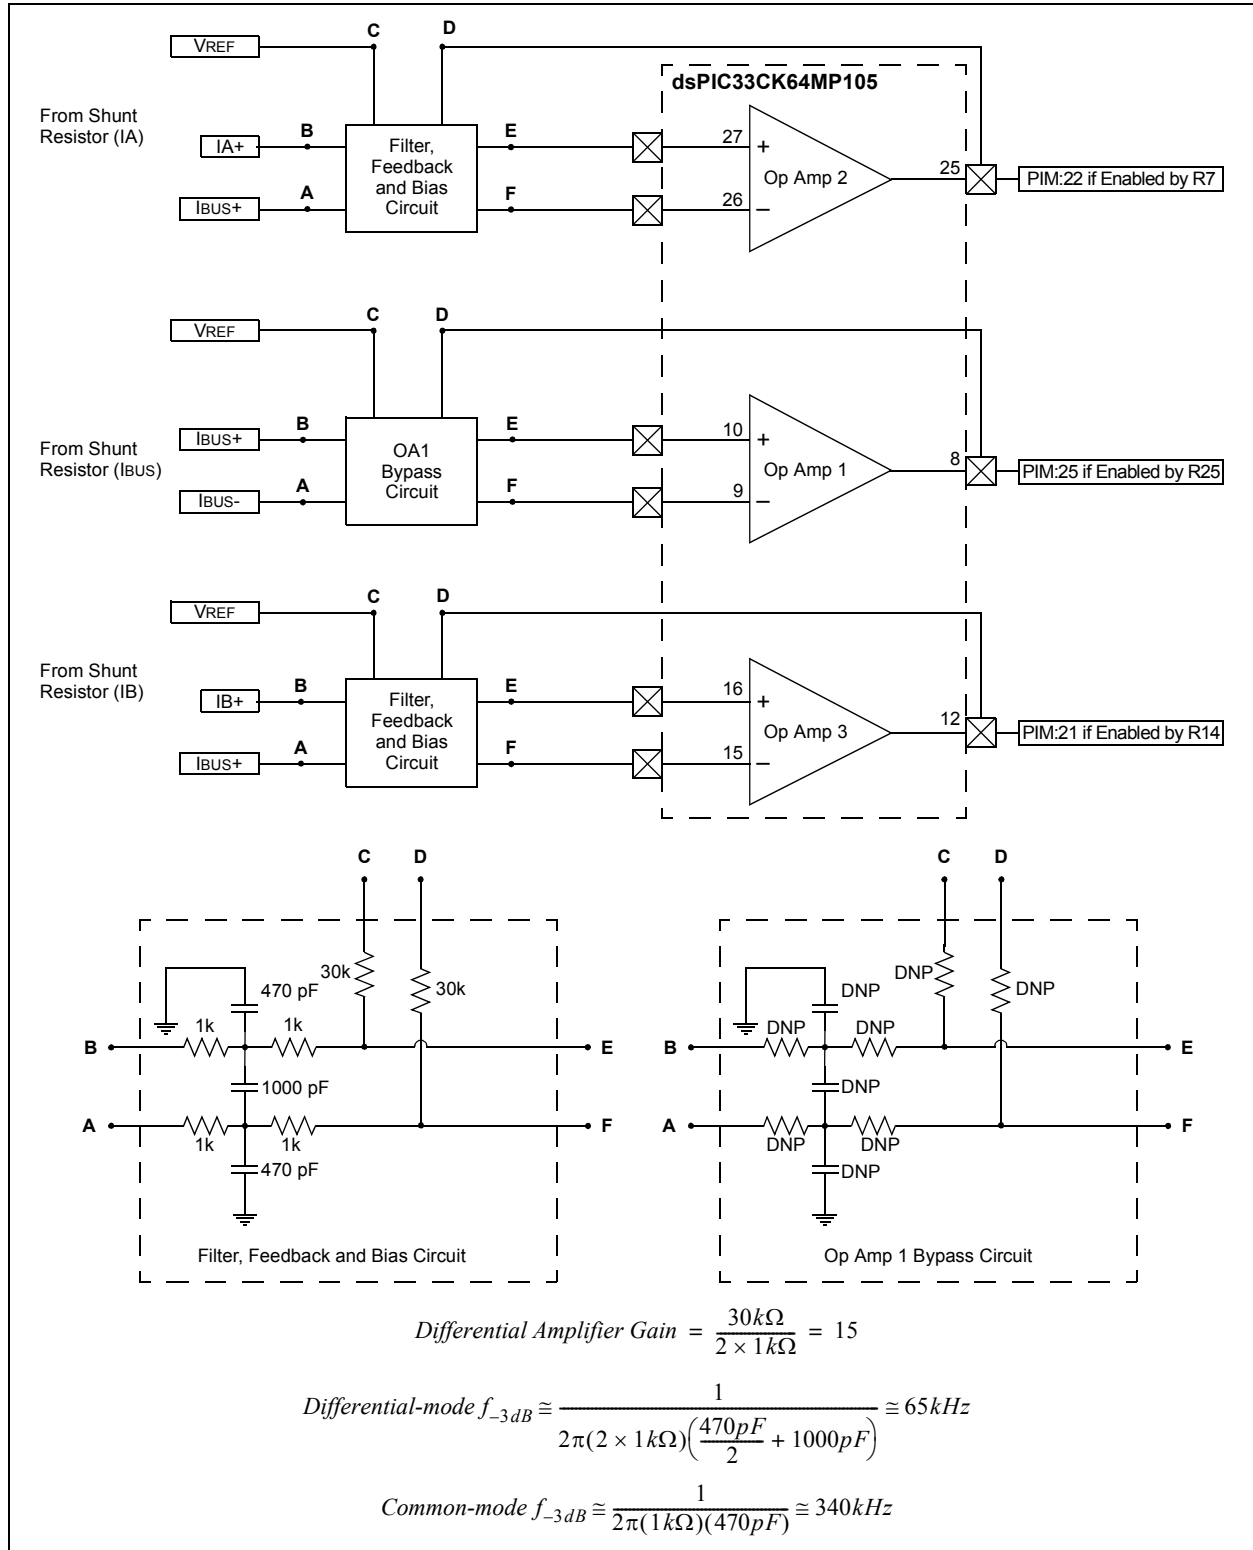

TABLE 4: ANALOG FUNCTIONALITY LISTING

Op Amp #	Analog Function	Passive Components	Design Equations
1	Low-Pass Filter	R15, R16, R17, R18, C14, C15, C16	$R15 = R16 = R17 = R18 = R$ $C14 = C16 = C$
	Reference Voltage Bias	R19, R22	$R19 = R22$
	Differential Amplifier Input	R15, R16, R17, R18	$Common\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi RC}$
	Differential Amplifier Feedback	R22	$Differential\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi(2R)\left(\frac{C}{2} + C15\right)}$ $Differential\ Amplifier\ Gain = \frac{R22}{2R}$
2	Low-Pass Filter	R1, R2, R3, R4, C8, C9, C10	$R1 = R2 = R3 = R4 = R$ $C8 = C10 = C$
	Reference Voltage Bias	R5, R6	$R5 = R6$
	Differential Amplifier Input	R1, R2, R3, R4	$Common\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi RC}$
	Differential Amplifier Feedback	R6	$Differential\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi(2R)\left(\frac{C}{2} + C9\right)}$ $Differential\ Amplifier\ Gain = \frac{R6}{2R}$
3	Low-Pass Filter	R8, R9, R10, R11, C11, C12, C13	$R8 = R9 = R10 = R11 = R$ $C11 = C13 = C$
	Reference Voltage Bias	R12, R13	$R12 = R13$
	Differential Amplifier Input	R8, R9, R10, R11	$Common\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi RC}$
	Differential Amplifier Feedback	R13	$Differential\text{-}mode\ f_{-3\ dB} \cong \frac{1}{2\pi(2R)\left(\frac{C}{2} + C12\right)}$ $Differential\ Amplifier\ Gain = \frac{R13}{2R}$

Op Amp 1, as seen in Figure 3, is not used by default. If the filter, bias and feedback circuit section is populated and configured by software, it can be used to amplify the IBUS current. Prior to using Op Amp 1, the resistor

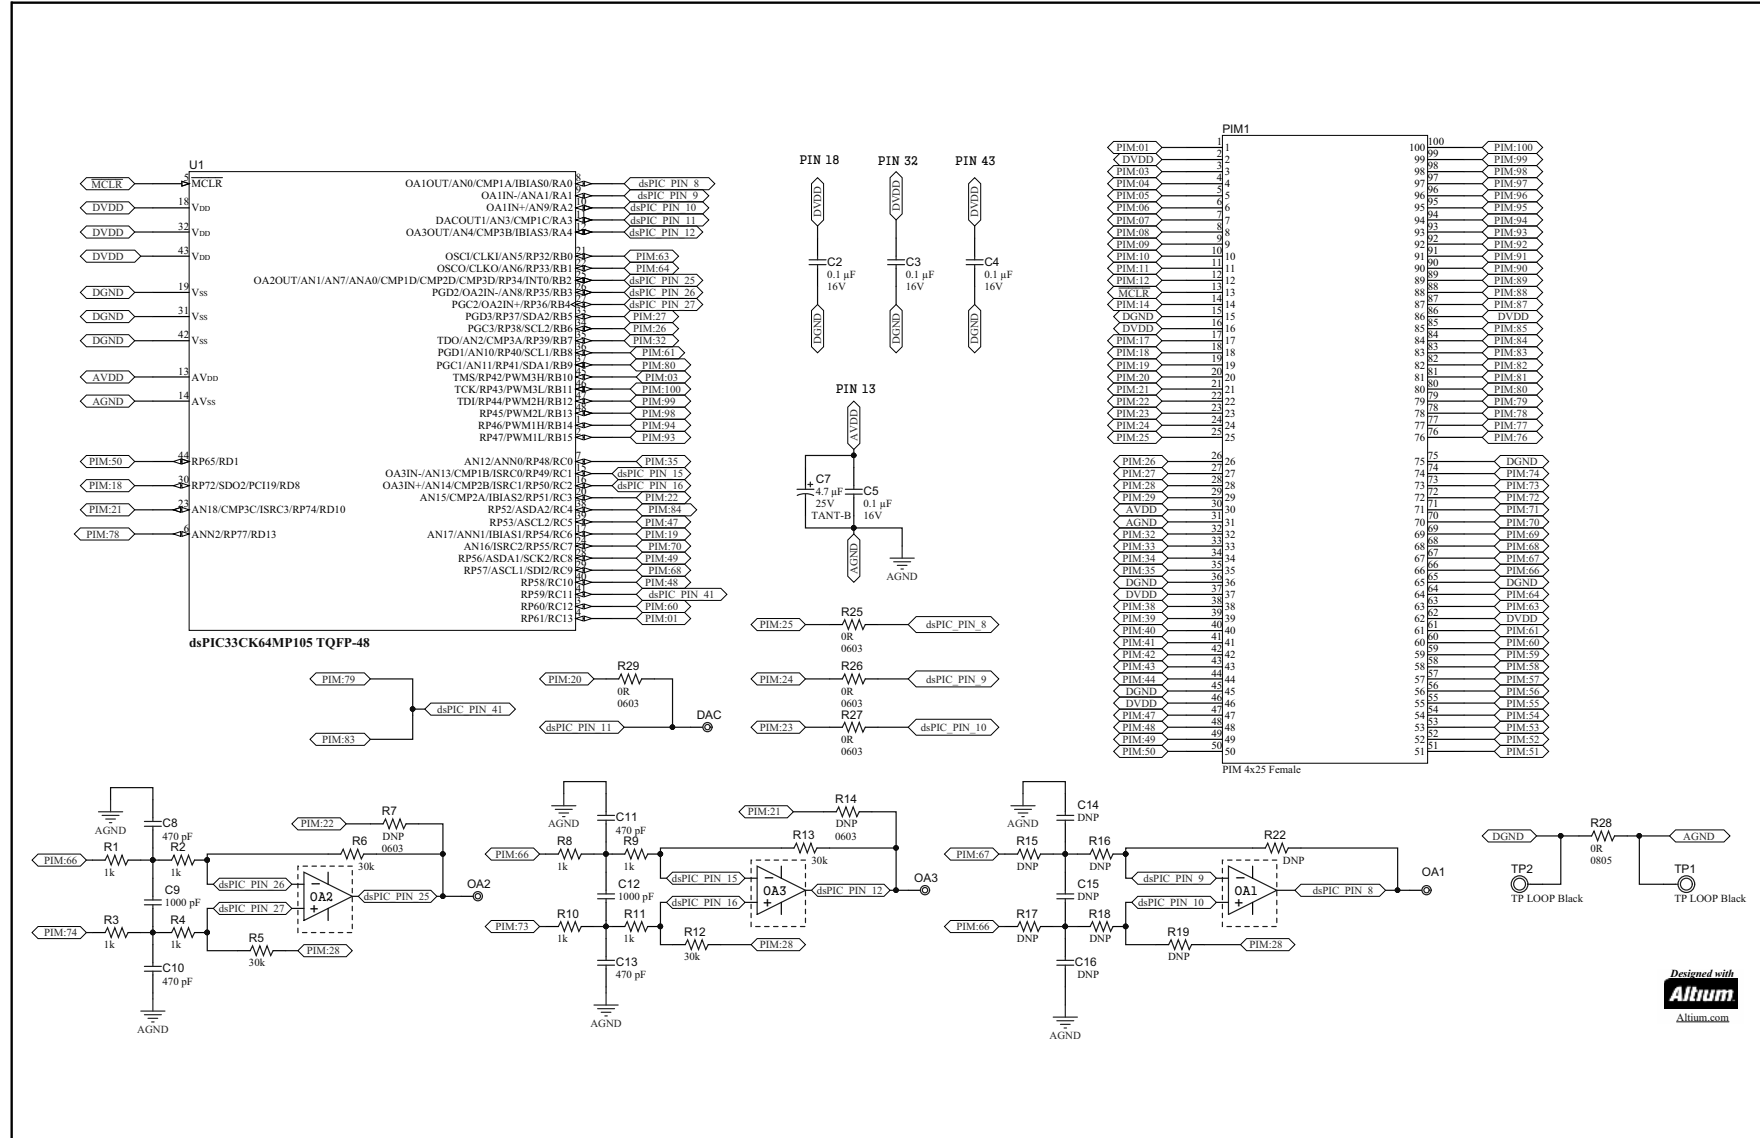

jumpers, R25, R26 and R27, should be removed to enable IBUS current to use the Op Amp 1 inputs. As a result, this limits the PFC functionality in the case of the dsPICDEM MCHV-2 or MCHV-3 Development Boards.

FIGURE 3: INTERNAL OP AMP CONFIGURATION

dsPIC33CK64MP105 Motor Control Plug-In Module (PIM) for Internal Op Amp Configuration

Schematic Revision 2.0

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
