DUAL JK POSITIVE EDGE-TRIGGERED FLIP-FLOP

General Description

The F109 consists of two high-speed, completely independent transition clocked $J\overline{K}$ flip-flops. The clocking operation is independent of rise and fall times of the clock waveform. The $J\overline{K}$ design allows operation as a D flip-flop (refer to F74 data sheet) by connecting the J and \overline{K} inputs.

NS Part Numbers

54F109DC

Asynchronous Inputs:

LOW input to $\overline{S}D$ sets Q to HIGH level LOW input to $\overline{C}D$ sets Q to LOW level Clear and Set are independent of clock Simultaneous LOW on $\overline{C}D$ and $\overline{S}D$ makes both Q and \overline{Q} HIGH
