## MTi-2

- Smallest form factor on the market
- Easy integration
- Development Kit available

The MTi-2 is the smallest self-contained Vertical Reference Unit (VRU) available on the market. The Xsens optimized strapdown algorithm (AttitudeEngine<sup>™</sup>) performs high-speed, dead-reckoning calculations at 1 kHz, allowing you to accurately capture high-frequency motions. Xsens' industry-leading sensor fusion algorithm provides high accuracy and sensor auto-calibration in this cost-effective module for a wide range of (embedded) applications. It relieves you of the work of designing, integrating and maintaining gyroscopes, accelerometers and other sensors.

The MTi-2 is part of the MTi 1-series supported by the MT Software Suite, which includes MT Manager (GUI for Windows/Linux), SDK, example codes and drivers for many platforms.
