Description

The PD18-73/PD18-73LF are monolithic, two-way in-phase hybrid junction power splitter/combiners for the 1.71 to 1.99 GHz band. Either device offers low loss, high isolation, good input/output matching, and exceptional phase/amplitude balance.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. PD18-73/PD18-73LF Signal Descriptions

Pin #	Name	Description	Pin #	Name	Description
1	PORT1	RF port 1	4	IN/SUM	RF in or sum port
2	GND	RF ground	5	GND	RF ground
3	PORT2	RF port 2	6	GND	RF ground

Table 2. PD18-73/PD18-73LF Absolute Maximum Ratings (Note 1)

Parameter	Symbol	Minimum	Maximum	Units
RF input power, CW (Note 2)	P _{IN}		1.5	W
RF input power, CW (Note 3)	P _{IN}		0.75	W
Operating temperature	T _{OP}	-40	+85	°C
Storage temperature	T _{STG}	-65	+150	°C

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

Note 2: When used as a power divider with a 2.0:1 maximum VSWR on all ports.

Note 3: When used as a power combiner with a 2.0:1 maximum VSWR on all ports.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.
