## 2.5V/3.3V SiGe Differential 2 X 2 Crosspoint Switch with Output Level Select

The NBSG72A is a high-bandwidth fully differential 2 X 2 crosspoint switch with Output Level Select (OLS) capabilities. This is a part of the GigaComm™ family of high performance Silicon Germanium products. The device is housed in a low profile 3 X 3 mm 16-pin QFN package.

Differential inputs incorporate internal 50 Ω termination resistors and accept NECL (Negative ECL), PECL (Positive ECL), LVCMOS/LVTTL, CML, or LVDS. The OLS input is used to program the peak-to-peak output amplitude between 0 mV and 800 mV in five discrete steps. The SELECT inputs are single-ended and can be driven with either LVECL or LVCMOS/LVTTL input levels.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

18. Measured using a 75 mV source, 50% duty cycle clock source. All loading with 50  $\Omega$  to  $V_{CC} - 2.0\text{ V}$ . OLS = FLOAT. Input edge rates 40 ps (20% – 80%).

19.  $t_{SKEW} = |t_{PLH} - t_{PHL}|$  for a nominal 50% differential clock input waveform.

20. Additive RMS jitter with 50% Duty Cycle clock signal at 7 GHz.

21. Additive Peak-to-Peak data dependent jitter with NRZ PRBS  $2^{31}-1$  data at 7 Gb/s.

22. Input Voltage Swing is a single-ended measurement operating in differential mode.  $V_{INPP}$  (max) cannot exceed  $V_{CC} - V_{EE}$ .
