

TYPE 4C

Application Tooling Specification Sheet

Tool Kit
Order No. 63825-6770

Hand Crimp Tool
Order No. 63825-6700

FEATURES

- % A full cycle ratcheting hand tool ensures complete crimps
- % Ergonomically designed soft handles
- % Precisely designed crimping profiles with simple contact positioning
- % Easy handling due to outstanding force ratio
- Tool kits are easily installed into the Hand Crimp Tool or the 63816-0300 Power Crimp Head which is installed into the 63816-0200 (110 V) or the 63816-0250 (220 V) Battery Powered Tool.
- Many different Tool kits can be used with a single Battery Powered Tool.
- This tool is IPC/WHMA-A-620 Class 2 and RoHS compliant.
- Separate Punch set for 24 AWG wire and separate punch set for 2 x 24 AWG wires, one anvil set.

SCOPE

Products: 2.8 (.110") P-Lock Flag Terminal 24 AWG and 24 + 24 AWG.

Terminal Series No.	Terminal Order No. * Available in Reel form only	Wire Size		Insulation Diameter Terminal ♦		Strip Length	
		AWG	mm ²	mm	In.	mm	In.
104442	104442-9702	24	N/A	1.45-1.55	.057-.061	3.40-3.90	.134-.154
		24 + 24	N/A	1.00-1.30	.039-.051		

* The terminals above are reeled parts only. Customer to cut off terminal from reel: 0.50mm (.020") maximum.
♦ Overall insulation OD specification for terminal.

DEFINITION OF TERMS

CONDITIONS:

After crimping, the conductor profiles should measure the following (See notes below).

Terminal Series No.	Wire Size		Conductor Crimp				Insulation Crimp				Pull Force Minimum		● Punch Set	
			Height		Width (Ref)		Height		Width (Ref)		N	Lbs	A	B
	AWG	mm ²	mm	In.	mm	In.	mm	In.	mm	In.				
104442	24	N/A	0.85-0.95	.033-.037	1.60	.063	---	---	---	---	29.4	6.6	X	
	24 + 24	N/A	1.00-1.10	.039-.043	1.60	.063	---	---	---	---	29.4	6.6		X

● See Page 3, Figure 3 to determine which Punch Set to use for each wire awg.

Tool Qualification Notes:

1. Pull Force should be measured with no influence from the insulation crimp.
2. The above specifications are guidelines to an optimum crimp.

Note:

A crimp height chart is provided with this manual as Reference Only. Due to the wide range of wires, strands, insulation diameters, and durometers, actual crimp height measurements may vary slightly. An occasional, destructive, pull force test should be performed to check hand tool crimp. Pull Force value must exceed the minimum pull force specifications listed.

CAUTION: Install only Molex terminals listed above with this tool. Do not crimp hardened objects as damage can occur to the tool or die.

INSTALLATION

To install the Tool Kit into the Power Crimp Head follow the steps below:

Anvils and Punches Installation

1. Insert the Anvils into the bottom slots of the nest. Install the M4 x 8 long BHCS and tighten in place.
2. Insert the Punches into the top slots of the nest. Install the M4 x 18 long BHCS and tighten in place. See Figure 1.

OPERATION

Open the tool by squeezing the handles together, at the end of the closing stroke, the ratchet mechanism will release the handles, and the hand tool will spring open.

Figure 3

Crimping Terminals

1. Select the desired terminal listed in the preceding charts.
2. Insert the terminal centered in the proper nest and up against the terminal stop.
3. ● If using a 24 AWG wire, load in the profile marked A from the front. See Figure 2.
4. ● If using a 24 + 24 AWG wires, load in the profile marked B from the front.
5. Lower tooling nest does not change.
6. Make sure when choosing the nest opening, it will correspond with the A or B profile on the hand tool. See Figure 3.

Figure 4

7. Partially close the tool to hold the terminal in place.
8. Insert the properly stripped wire into the insulation crimp nest. See Figure 4.
9. Now close the handle completely and release. The jaws will open when the tool has fully closed.
10. Make sure the insulation grips wrapped snug around the insulation of the wire.

Note: The tamper proof ratchet action will not release the tool until it has been fully closed.

For the Battery Power Tool:

1. Cycle the Battery Power Tool to crimp the terminal to the wire.
2. Remove the crimped terminal from the terminal locator by pressing down on the wire stop and gently pulling on the wire. The terminal locator can be in either position.
3. Visually inspect the crimped terminal for proper crimp location.

Maintenance

It is recommended that each operator of the tool be made aware of, and responsible for, the following maintenance steps:

1. Remove dust, moisture and other contaminants with a clean brush, or soft, lint-free cloth.
2. Do not use any abrasive materials that could damage the tool.
3. Make certain all pins; pivot points and bearing surfaces in the tool head are protected with a thin coat of high quality machine oil. Do not oil excessively. This tool was engineered for durability, but like any fine piece of equipment, it needs cleaning and lubrication for a maximum service life of trouble-free crimping. The use of light oil, such as 30 weight automotive oil, every 5,000 crimps or monthly, will significantly enhance the tool life and ensure a stable calibration. See Figure 5A or 5B for lubrication points.

4. Store the tool in a clean and dry area when not in use.

Miscrimps or Jams for Crimp Hand Tools Only (See Figure 8)

Should this tool ever become stuck or jammed in a partially closed position, **Do Not force the handles open or closed.** The tool will open easily by rotating the small slotted screw marked with an arrow. See Figure 8.

Warranty

This tool kit is for electrical terminal crimping purposes only. This tool kit is made of the best quality materials. All vital components are long life tested. All tools are warranted to be free of manufacturing defects for a period of 30 days. Should such a defect occur, we will repair or exchange the tool kit free of charge. This repair or exchange will not be applicable to altered, misused, or damaged tools.

CAUTION: Molex crimp specifications are valid only when used with Molex terminals and tooling.

CAUTIONS

1. Manually powered hand tools are intended for low volume or field repair. This tool is **NOT** intended for production use. Repetitive use of this tool should be avoided.
2. Insulated rubber handles are not protection against electrical shock.
3. Wear eye protection at all times.
4. Use only the Molex terminals specified for crimping with this tool.

CAUTION: Repetitive use of this tool should be avoided.

Certification

Molex does not certify or re-certify commercial grade hand tools but rather supplies the following guidelines for customers to re-certify hand tools.

- % This tool is qualified to pull force only. To re-certify, crimp a terminal to a wire, which has been stripped 12.7mm (1/2") long, so there is no crimping of the insulation. Pull the terminal and wire at a rate no faster than 25mm (1.00") per minute. See the Molex web site for the Quality Crimp Handbook for more information on pull testing.
- % When the hand tool is no longer capable of achieving minimum pull force, it should be taken out of service and replaced.
- % This tool is very difficult to disassemble and reassemble. Customer repair is not recommended.

The chart below shows all applications for this Tool Kit.

Tool Kit Order No.	Tool Order no.	Tool Description	Power Head Order No.	Adapter Description	Figure No.
63825-6770	63810-1050	Hand Crimp Frame (Short)	N/A	N/A	6
	63810-1000	Hand Crimp Frame (Long)	N/A	N/A	6
	63816-0200	Battery Power Tool (110 V)	63816-0300	Power Crimp Head	7
	63816-0250	Battery Power Tool (220 V)	63816-0300	Power Crimp Head	7

WARNING: NEVER operate service, install tool kits, or adjust the Power Crimp Head without proper instruction and without first reading and understanding the instructions in the proper Manual or Specification Sheet. See Chart above for the correct Manual or Specification Sheet.

WARNING: NEVER install tooling or service this tool while it is into any power source. Make sure the power is turned off.

CAUTION: Keep fingers away from the crimping area when operating this tool. It may cause severe injury.

CAUTION: Wear safety glasses when operating or serving this tool.
