

# DIP to SO-Plug Prototyping Adapter Kits

These adapters will convert a small outline land pattern to a DIP package. The adapter provides a solder down SO-plug on the bottom and a detachable 300 or 600 mil wide open-frame DIP socket on the top. They are also available with optional, detachable Aries ZIF sockets. This allows an emulator or DIP device to be plugged in. We support 1.27mm pitch devices in pin counts from 8 - 44 and body sizes of 150 mil (3.8mm) - 520 mil (13.5mm).

Use the searches or the manufacturer pages on our website at [www.logicalsys.com](http://www.logicalsys.com) to identify the correct SO-Plug for the device you are using or compare your prototype's land pattern to the recommended land patterns for each size plug. Select the kit or individual components that fit your needs. Confirm the DIP pin count and row spacing with your emulator or prototyping devices.

Part number format - **PA-DSO-bbbb(Z)-Dwww-pp/x**

- bbbb = Board pin count (08 - 44) + width (03 or 06)
- (Z) = Optional ZIF socket
- www = Plug width (250 – 630)
- pp = Plug pin count (08 – 44)
- x = Number of plugs in kit

Device Width	Pins	Part Numbers to Order				
		Kits with one DIP board and two plugs		Extra Boards		Extra Plugs
		300 mil wide DIP top (optional ZIF socket)	600 mil wide DIP top (optional ZIF socket)	Open frame socket (ZIF socket)	Open frame socket (ZIFsocket)	Packages of six
