

# EZO-HUM<sup>TM</sup>

## Embedded Humidity sensor

Reads	<b>Relative humidity</b> <b>Dew point</b> <b>Air temperature</b>
Range	<b>0 – 100%</b>
Calibration	<b>Factory calibrated</b>
Response time	<b>1 reading per second</b> <small>(UART mode)</small> <b>1 reading per 300 milliseconds</b> <small>(I2C mode)</small>
Accuracy	<b>+/- 2%</b>
Connector	<b>5 lead data cable</b>
Cable length	<b>1 meter</b>
Data protocol	<b>UART &amp; I<sup>2</sup>C</b>
Default I2C address	<b>111 (0x6F)</b>
Data format	<b>ASCII</b>
Operating voltage	<b>3.3V – 5V</b>
IP rating	<b>IP67</b>
Life expectancy	<b>10 years</b>

# Attention

The EZO-HUM™ is 100% operational out of the box.  
**CALIBRATION IS UNNECESSARY**

Direct sunlight will heat the sensor above the air temperature, making the readings incorrect.

Can the sensor get wet?

**Don't do that**

Yes, readings will be  $>100\%$  when wet and will return to normal once dry.

# Physical properties

Weight 127g

Body 316 Stainless Steel

## Pin out

Data and power cable pinout

White - RX/SCL  
Green - TX/SDA  
Black - GND  
Red - VCC  
Blue - AUTO

The auto monitor pin will go high when a set humidity has been reached.

57.38%

0V

VCC

\*Auto monitor set to 57.38%

If unused leave **AUTO** floating. Do not connect **AUTO** to **VCC** or **GND**.

See page 18 to enable auto-monitoring in UART mode.

See page 40 to enable auto-monitoring in I2C mode.

# Power consumption

	LED	MAX	SLEEP
5V	ON	2.6 mA	0.5 mA
	OFF	2.4 mA	
3.3V	ON	2.2 mA	0.3 mA
	OFF	2.0 mA	

# Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature	-30 °C		75 °C
Operational temperature	-20 °C	25 °C	80 °C
VCC	3.3V	3.3V	5.5V

# Air temperature

# Calibration theory

The Atlas Scientific EZO-HUM™ Embedded Humidity Sensor comes pre-calibrated. The factory calibration data is permanently stored in the circuit and cannot be erased.

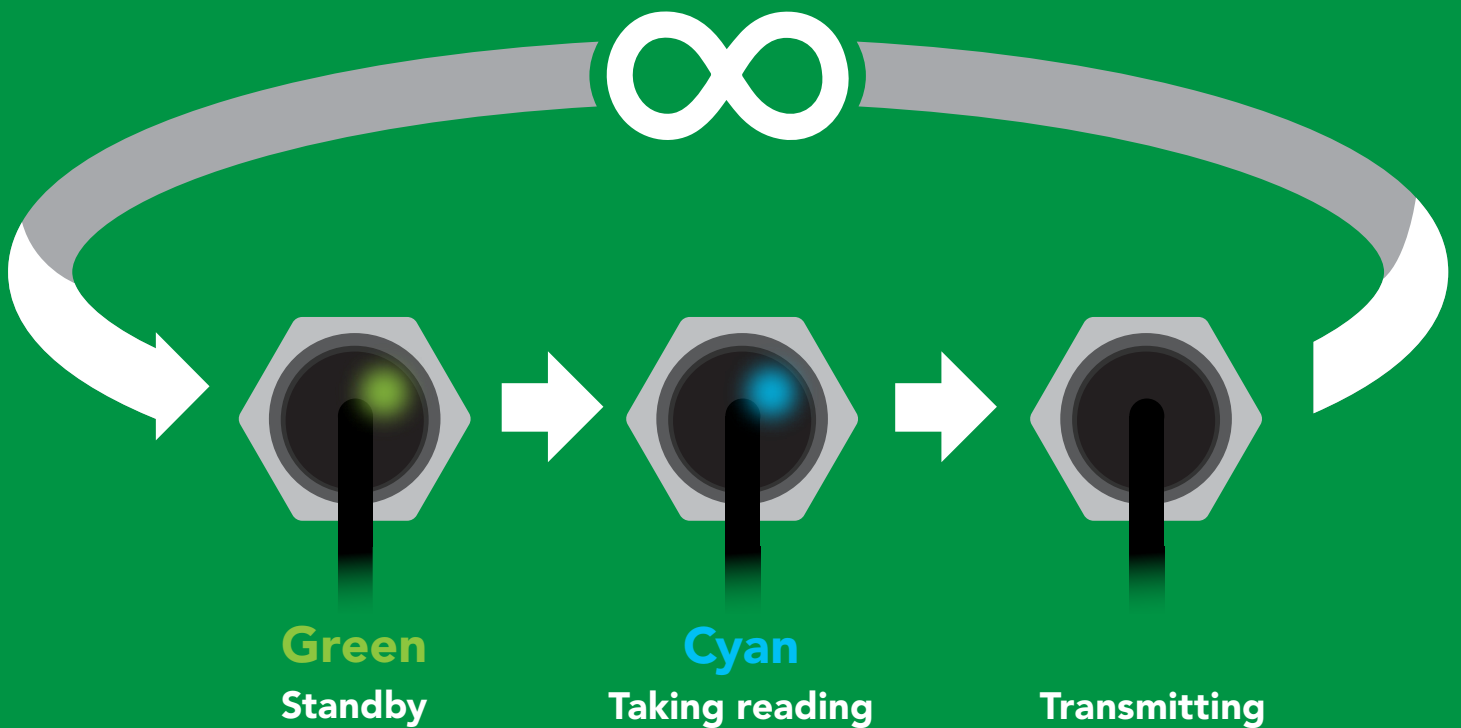

# Custom calibration

This circuit does not require recalibration, and does not offer onboard custom calibration.

Default state

# UART mode

1 second

# Auto monitor

## Command syntax

When enabled, the sensor will continuously monitor the readings and set the auto monitor pin high when your value has been reached. When Auto Monitor is enabled, it is not necessary to actively take readings (continuous mode can be disabled).

- Auto,en, [0,1,2]** <cr> 0 = disable, 1= Enable for humidity, 2= Enable for dew point
- Auto,n** <cr> The value that will set the alarm pin
- Auto,tol,n** <cr> The value that will reset the alarm pin
- Auto,?** <cr> Auto monitor settings

## Example

## Response

**Auto,en,1** <cr>

**\*OK** <cr> Enable humidity automonitoring

**Auto,57.38** <cr>

**\*OK** <cr> Set alarm to go off at 57.38% humidity

**Auto,tol,1.2** <cr>

**\*OK** <cr> The humidity must fall 1.2 percentage points below set point for alarm to reset.

**Auto,?** <cr>

**?,auto,57.38,1.20,1** <cr> if all are enabled

# Enable/disable parameters from output string

## Command syntax

O, [parameter],[1,0] <cr> enable or disable output parameter  
O,? <cr> enabled parameter?

### Example

O,HUM,1 / O,HUM,0 <cr>

O,T,1 / O,T,0 <cr>

O,Dew,1 / O,Dew,0 <cr>

O,? <cr>

### Response

\*OK <cr> enable / disable humidity

\*OK <cr> enable / disable temperature

\*OK <cr> enable / disable dew point

?,O,HUM,T,Dew <cr> if all enabled

### Parameters

Hum Humidity  
T Air temperature in °C  
Dew Dew point

### Followed by 1 or 0

1 enabled  
0 disabled

**\* If you disable all possible data types your readings will display "no output".**

# Naming device

## Command syntax

Do not use spaces in the name

Name,n <cr> set name

Name, <cr> clears name

Name,? <cr> show name

n =

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

## Example

## Response

Baud,? <cr>

?Baud,38400 <cr>

\*OK <cr>

n =

- 300
- 1200
- 2400
- 9600 default**
- 19200
- 38400
- 57600
- 115200

Standby

Baud,38400 <cr>

Changing  
baud rate

\*OK <cr>

(reboot)

Standby

# Protocol lock

## Command syntax

Locks device to UART mode.

`Plock,1 <cr>` enable Plock

`Plock,0 <cr>` disable Plock **default**

`Plock,? <cr>` Plock on/off?

## Example

## Response

`Plock,1 <cr>`

`*OK <cr>`

`Plock,0 <cr>`

`*OK <cr>`

`Plock,? <cr>`

`?Plock,1 <cr>` or `?Plock,0 <cr>`

`Plock,1`

`*OK <cr>`

`I2C,100`

cannot change to I<sup>2</sup>C

`*ER <cr>`

cannot change to I<sup>2</sup>C

# Factory reset

## Command syntax

Factory <cr> enable factory reset

### Example

Factory <cr>

### Response

\*OK <cr>

Factory <cr>

(reboot)

\*OK <cr>

\*RS <cr>

\*RE <cr>

Baud rate will not change

# Change to I<sup>2</sup>C mode

## Command syntax

Default I<sup>2</sup>C address 111 (0x6F)

I2C,n <cr> sets I<sup>2</sup>C address and reboots into I<sup>2</sup>C mode

n = any number 1 – 127

### Example

### Response

I2C,100 <cr>

\*OK (reboot in I<sup>2</sup>C mode)

### Wrong example

### Response

I2C,139 <cr> n ≠ 127

\*ER <cr>

I2C,100

Green  
\*OK <cr>

(reboot)

Blue  
now in I<sup>2</sup>C mode

# Manual switching to I<sup>2</sup>C

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from **Green** to **Blue**
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I<sup>2</sup>C will set the I<sup>2</sup>C address to 111 (0x6F)

## Example

## Wrong Example

# I<sup>2</sup>C mode

The I<sup>2</sup>C protocol is *considerably more complex* than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO™ device into I<sup>2</sup>C mode click [here](#)

## Settings that are retained if power is cut

- Calibration
- Change I<sup>2</sup>C address
- Hardware switch to UART mode
- LED control
- Protocol lock
- Software switch to UART mode

## Settings that are **NOT** retained if power is cut

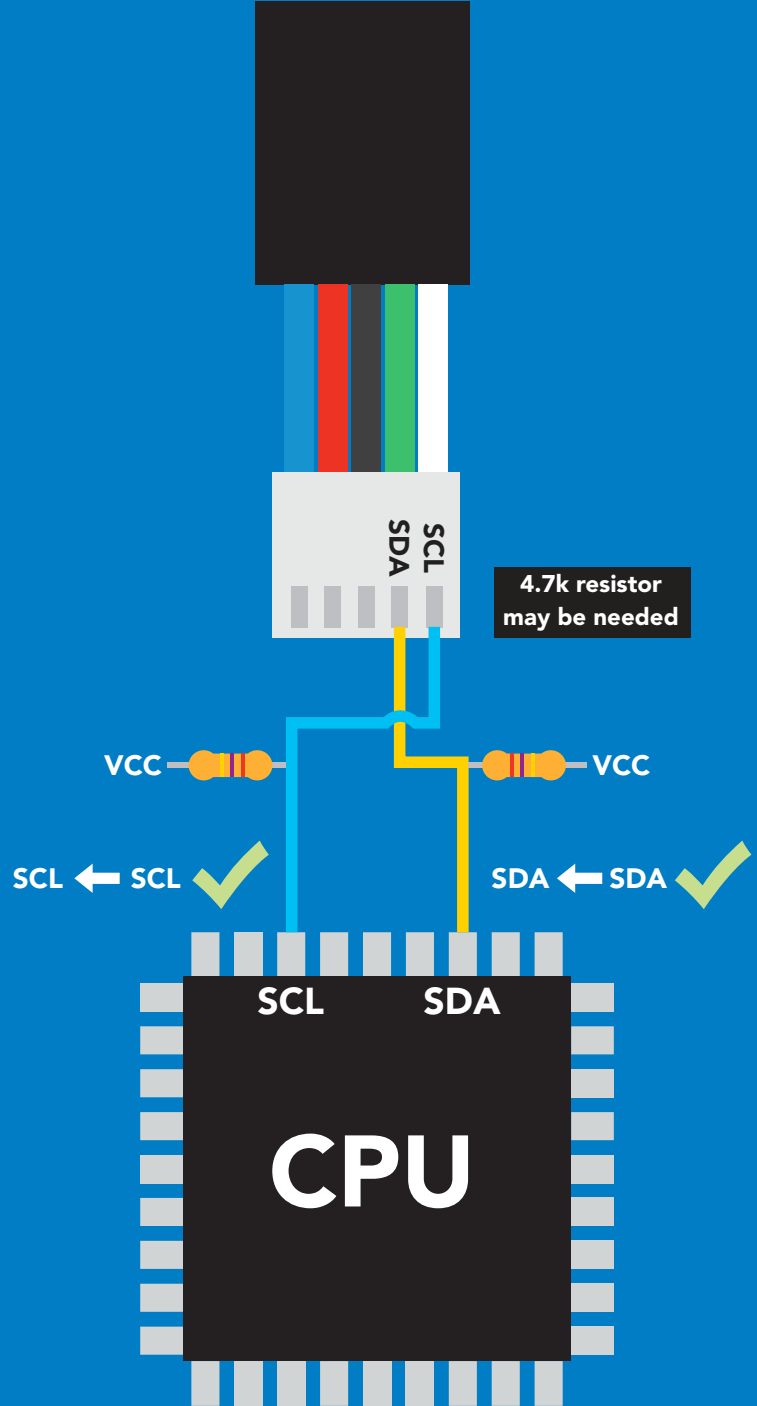

- Sleep mode

# I<sup>2</sup>C mode

I<sup>2</sup>C address (0x01 – 0x7F)  
**111 (0x6F) default**

Vcc 3.3V – 5.5V

Clock speed 100 – 400 kHz

# Data format

**Reading** Humidity  
 Air Temperature  
 Dew point

**Units** % Relative humidity  
 Air Temperature °C (when enabled)  
 Dew point Temperature °C (when enabled)

**Encoding** ASCII (CSV string if temp/  
 dew point enabled)

**Data type** floating point

**Decimal places** 2

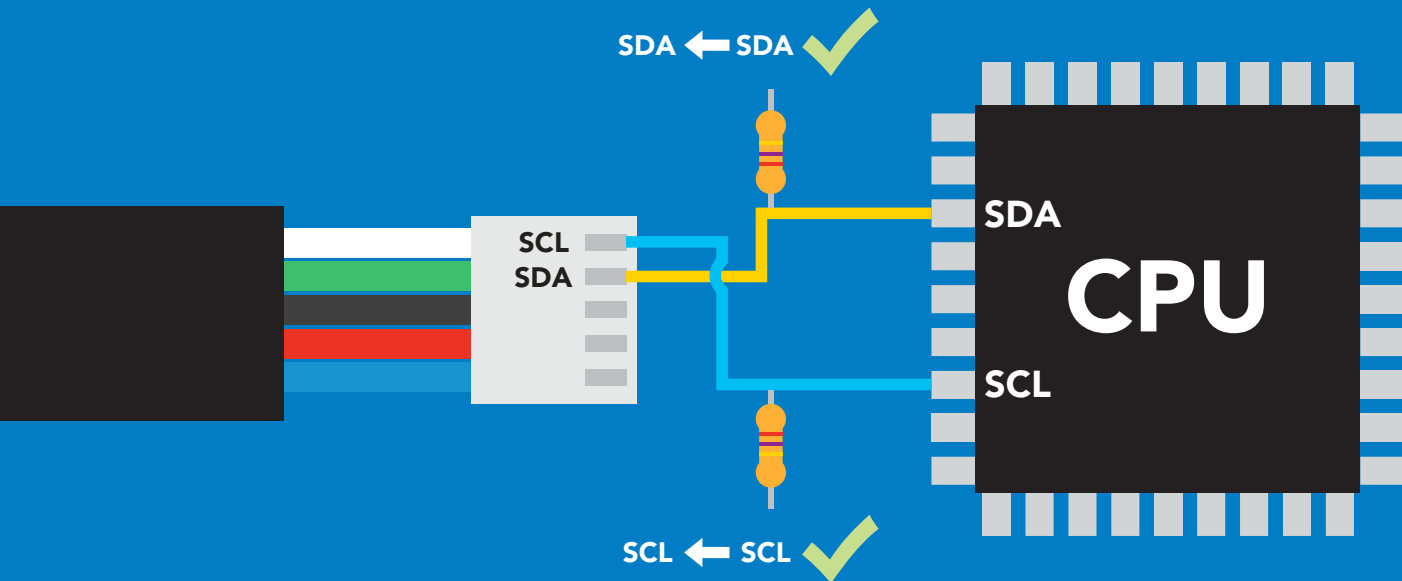

**Smallest string** 4 characters

**Largest string** 24 characters

# Sending commands to device

## Example

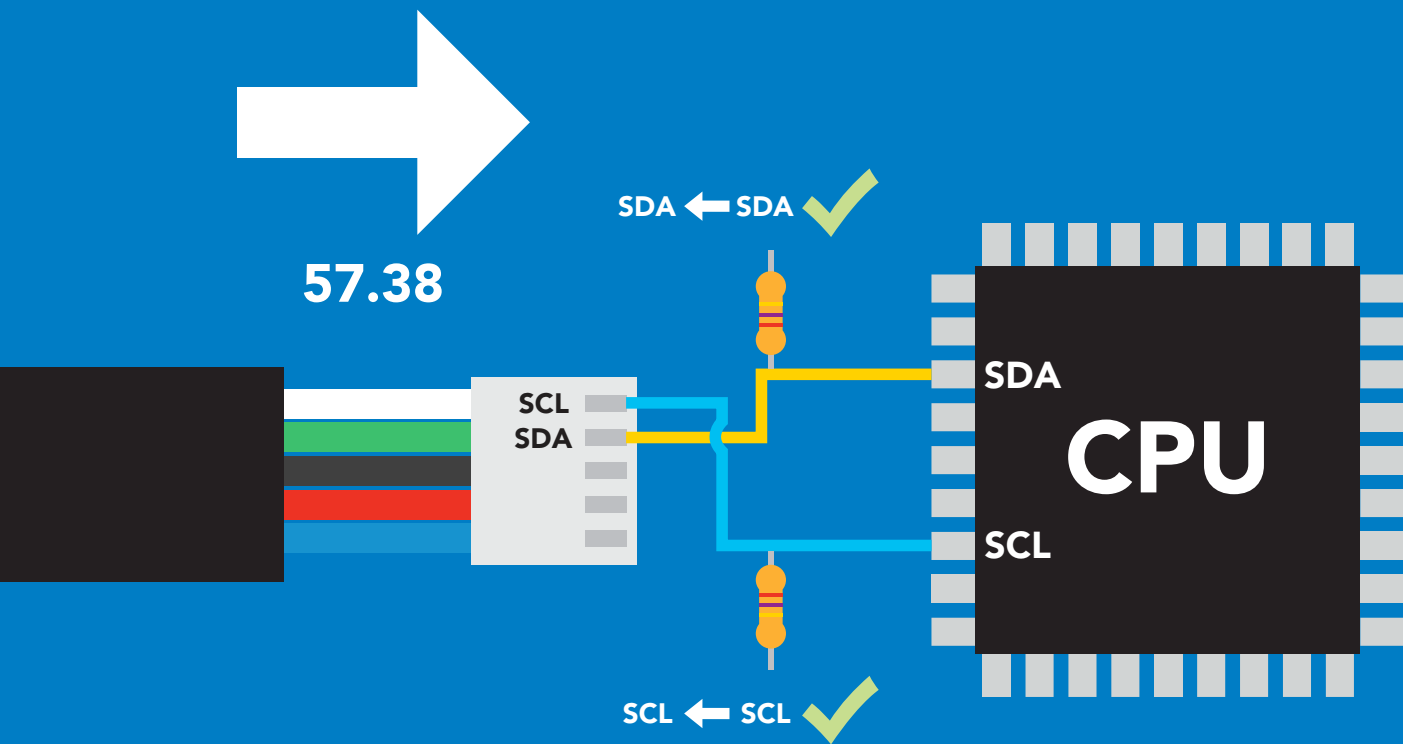

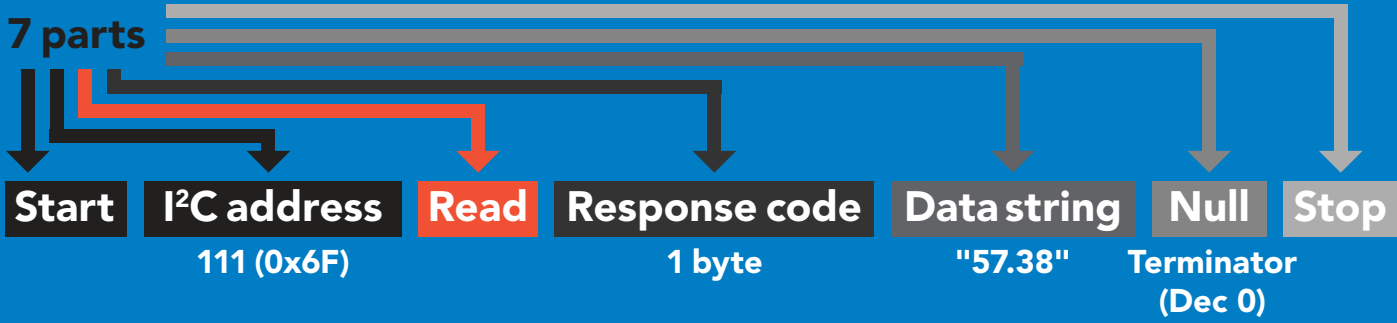

## Advanced

# Requesting data from device

## Advanced

# Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

*Reading back the response code is completely optional, and is not required for normal operation.*

## Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

```
delay(300);
```

```
Processing delay
```

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

### Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

# Indicator LED control

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

## Example

## Wrong Example

# Datasheet change log

## Datasheet V 1.3

Added Air Temperature chart on pg 5.

## Datasheet V 1.2

Revised naming device info on pages 20 & 42.

## Datasheet V 1.1

Revised the information on pg 3.

## Datasheet V 1.0

New datasheet

# Firmware updates

V1.0 – Initial release (August 14, 2020)

# Warranty

Atlas Scientific™ Warranties the EZO-HUM™ Embedded Humidity Sensor to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-HUM™ Embedded Humidity Sensor (which ever comes first).

## The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-HUM™ Embedded Humidity Sensor is connected into a bread board, or shield. If the EZO-HUM™ Embedded Humidity Sensor is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-HUM™ Embedded Humidity Sensor is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-HUM™ Embedded Humidity Sensor exclusively and output the EZO-HUM™ Embedded Humidity Sensor data as a serial string.

**It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-HUM™ Embedded Humidity Sensor warranty:**

- **Soldering any part to the EZO-HUM™ Embedded Humidity Sensor.**
- **Running any code, that does not exclusively drive the EZO-HUM™ Embedded Color Sensor and output its data in a serial string.**
- **Embedding the EZO-HUM™ Embedded Humidity Sensor into a custom made device.**
- **Removing any potting compound.**

# Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-HUM™ Embedded Humidity Sensor, against the thousands of possible variables that may cause the EZO-HUM™ Embedded Humidity Sensor to no longer function properly.

## Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-HUM™ Embedded Humidity Sensor continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
