

#### **5ACFEW 3 series**

5Watt AC-DC converter

### **AC-DC Converter**

5 Watt

- Ultra-wide 85-305VAC & 70-430VDC input voltage range
- Accepts AC or DC input (dual-use of same terminal)
- Operating ambient temp. range -40°C to +85°C
- Multi application, flexible layout
- Compact size, high power density, green power Controllable life and adjustable cost
- No-load power consumption: 0.1W
- Output short circuit, over-current protection
- Designed to meet IEC/EN/ UL62368, IEC/EN61558, IEC/EN60335 standards
- FIEC/EN/UL62368 safety approval (Vertical mounting)
- (Horizontal package)

SACFEW\_3 series is one of GAPTEC's highly efficient green power AC-DC Converter series. They feature wide input range accepting either AC or DC voltage, high reliability, low power consumption and reinforced isolation. All models are particularly suitable for industrial control, electric power, instrumentation and smart home applications which have high requirement for dimension and don't have high requirement on EMC. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

| Common specifications        |  |  |
|------------------------------|--|--|
| Short circuit protection:    | Hiccup, continuous, s  | self-recovery  |
| Operation temperature range: | -40°C to +85°C   |  |
| Storage temperature range:   | -40°C to +105°C  |  |

- \* The "parallel cable" method is used for ripple and noise test, please refer to AC-DC Converter Application Notes for specific information;
- 2. The product is able to work with 0%-10% load and with stable output.

#### Example:

5ACFEW\_03S3

5 = 5Watt; AC = AC-DC; F = Open Frame; E = series; W = wide input 03 = 3Vout; S = single output; 3 = 3 kVAC isolation

#### Note

- 1. External electrolytic capacitors are required to modules, more details refer to typical applications;
- 2. This part is open frame, at least 6.4mm creepage distance between the primary and secondary external components of the module is needed to meet the safety requirement, refer to the recommended welding hole design in the external dimension drawing;
- 3. Unless otherwise specified, parameters in this datasheet were measured under the conditions of  $Ta = 25^{\circ}C$ , humidity <75%, nominal input voltage (115V and 230V) and rated output load;
- 4. All index testing methods in this datasheet are based on our company corporate standards;
- 5. We can provide product customization service, please contact our technicians directly for specific information;
- 6. Products are related to laws and regulations: see Features" and "EMC";
- 7. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.

- 1. The nominal output voltage refers to the voltage applied to the load terminal after adding external circuits.
- 2. If the product is used in a severe vibration application, it needs to be glued and fixed.

  3. Please add suffix "/L" for horizontal mounting version.

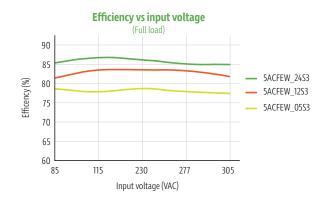

### Product typical curve

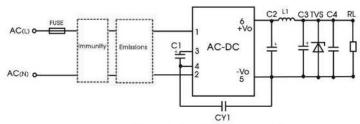

- 1. With an AC input between 85 -100VAC/277- 305VAC and a DC input between 70 120VDC/390 430VDC, the output power must be derated as per temperature derating curves;
- 2. This product is suitable for applications using natural air cooling; for applications in closed environment please consult us directly.

#### Note:

- 1. C1 is used as filter capacitor with AC input (must be connected externally) and as EMC filter capacitor with DC input (must be connected), and it
- is recommended to use the capacitor with ripple current >200mA@100KHz.
- 2. We recommend using an electrolytic capacitor with high frequency and low ESR (ESR of C3 at low temperature of -40 🗵 ≤1.1Ω) rating for C3 (refer to manufacture's datasheet), electrolytic capacitor can be used for C2 when applied in normal and high temperature environments. Combined with C2, L1, they form a pi-type filter circuit. Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C4 is a ceramic capacitor, used for filtering high frequency noise.
- 3. A suppressor diode (TVS) is recommended to protect the application in case of converter failure and specification should be 1.2 times of the output voltage.
- 4. LDM ( 1.2mH, P/N: 12050373; 4.7mH, P/N: 12050305), L1 ( 4.7uH, P/N: 12050181).

|                                    |                           |

- 1: In the home appliance application environment, the two Y capacitors of the primary and secondary need to be externally connected (CY1/CY2, value at 2.2nF/250VAC), which can meet the EN60335 certification.
- 2: According to the certification requirements, the X capacitor needs to be connected in parallel with the bleeder resistance, the recommended resistance value is less than 3.8M $\Omega$ , and the actual need to be selected according to the certification standard.
- 3: R1 is the input pluq-in resistor, this resistor needs to be a wire-wound resistor (required), please do not select chip resistor or carbon film resistor.

### 3. Application circuit 3 - Universal system recommended circuits for indoor industrial environment

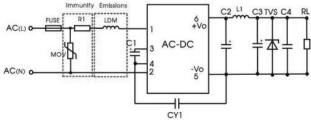

recommended circuit 3

| Application environmental | Ambient temperature range | Immunity CLASS | Emissions CLASS |
|---------------------------|---------------------------|----------------|-----------------|
| Indoor industrial         | -25°C to +55°C            | CLASS IV       | CLASS B         |

| S14K350                   |
|---------------------------|
| 0.1μF/310VAC              |
| 1.2mH/Max: 4.0Ω/Min: 0.2A |
| 12Ω/3W                    |
| 1A/300V, slow-blow        |
|                           |

#### Note

#### 4. Application circuit 4 - Universal system recommended circuits for outdoor general environment

recommended circuit 4

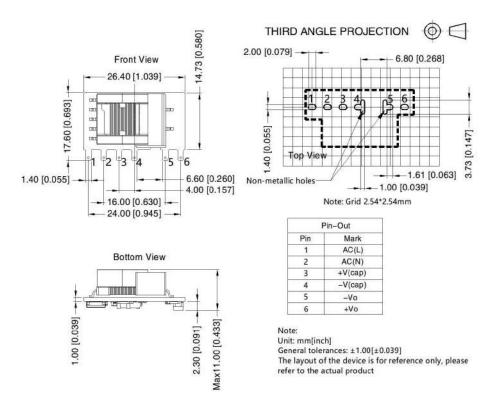

| Application environmental   | Ambient temperature range | Immunity CLASS | Emissions CLASS |
|-----------------------------|---------------------------|----------------|-----------------|
| Outdoor general environment | -40°C to +85°C            | CLASS IV       | CLASS A         |

| Component  | Recommended value   |
|--|---|
| MOV  | S14K350   |
| LDM  | 4.7mH/Max: 15Ω/Min: 0.2A  |
| R1 (wire-wound resistor, required)   | 12Ω/3W  |
| FUSE (required)  | 2A/300V, slow-blow  |
| Note: R1 is the input plug-in resistor, this resistor needs to be a wire-wound resistor (r | equired), please do not select chip resistor or carbon film resistor. |

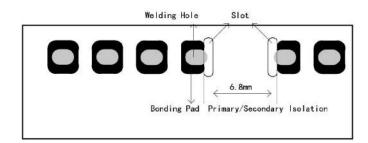

<sup>1:</sup> According to the certification requirements, the X capacitor needs to be connected in parallel with the bleeder resistance, the recommended resistance value is less than  $3.8M\Omega$ , and the actual need to be selected according to the certification standard. 2: R1 is the input plug-in resistor, this resistor needs to be a wire-wound resistor (required), please do not select chip resistor or carbon film resistor.
