# *Trimmer Capacitors & Non-Magnetic Components*

# Introduction to Voltronics Corporation

Voltronics has been supplying high performance multi-turn trimmers since 1963. Our range of trimmers are suitable for applications that require high precision, mechanically stable with a high tolerance to vibration and shock. Our success is based on a unique sealed, non-rotating piston design that has become one of the designers preferred choices for demanding applications.

As well as our extensive range of standard products we are able to design and manufacture customized products for our specialty customers. In addition we are able to offer a range of half turn trimmers suitable for less stringent applications, but still providing good stability and voltage handling capabilities.

For more than 30 years Voltronics has been partnered with leading MRI manufacturers, supporting them with the highest quality non-magnetic components. This has grown from just supplying trimmer capacitors to now include a broad offering of non-magnetic components focussed on MRI applications.

J-Series engineering kits are a great way to become familiar with our products. Each kit contains 4 or 5 units of every value. Please be sure to inquire about tuning tools when ordering.

\* Tuning tools are included with this kit.

\*\*Tuning tools are not included with this kit.

## Washing Instructions:

The J-Series trimmer capacitors can withstand cleaning cycles up to 10 PSI and have been used by customers for more than a decade in many diverse environmental conditions. Without knowing your particular washing or cleaning environment, we recommend these basic guidelines:

- 1) Water wash or isopropyl alcohol cleaning agents are acceptable providing that baths are clean and uncontaminated. For maximum effectiveness, the cleaning process should occur immediately after soldering.
- 2) Either brush or spray methods are acceptable.
- 3) \* Drying out components with forced hot air is highly recommended.
- 4) Also, we do recommend turning the tuning screw 3 or 4 complete revolutions prior to arriving at the final "set."

\* If a water wash process is used and water does get inside, we recommend that the parts be heated above 100C for a minimum of 15 minutes, so that the water evaporates. After this, the rotor should be turned 1-2 times to redistribute the internal grease.

# A & E - Standard AIR Trimmer Capacitors

## The Only Internally-Sealed Air Trimmer

Voltronics' concentric ring air trimmer capacitors are designed for use at frequencies up to 1.5 GHz. They are ideal for applications such as mobile radios, aerospace communication, crystal oscillators and filters, radar, cable TV and innumerable other commercial and military programs. The unique internal O-ring seal make wave soldering and vapor degreasing possible without the need to attach a separate cap.

Available in two styles:

"A" Series - Solder sealed and qualified to MIL-C-14409.

"E" Series - Epoxy sealed for economical commercial applications.

### Other features include:

- Ten full linear turns
- Internal stops
- Extreme stability under shock & vibration
- Screw head does not move in and out
- Extended shaft option of metal or plastic
- Long life with no dynamic tuning noise

### Note:

All parts shown here can be ordered as non-magnetic:

# A1 & A3 - Low Cost PTFE Trimmer Capacitors

The Voltronics A1 & A3 Series of high reliability solid dielectric trimmer capacitors is an ideal economical replacement for conventional miniature air and sapphire dielectric trimmers and assures no intermittent noiseless performance.

High reliability solid dielectric, positive tuning stops and up to 13 full turns of linear tuning make the A1 Series an outstanding performer: 40 psi sealed, high voltage and non-magnetic versions are readily available.

# A2 & A4 - Low Cost Miniature PTFE Trimmer Capacitors

The Voltronics A2 Series is among the smallest multi-turn piston trimmer capacitors in the industry. Utilizing a high reliability solid dielectric, positive tuning stops and 3 standard mounting configurations this trimmer capacitor is an ideal replacement for expensive sapphire dielectric trimmers. Applications include tuning and impedance matching of high frequency, and high power amplifiers especially where small size and high performance are critical requirements.

Tuning Torque	0.1 to 1.0 in-oz
Shock	1,500g, 0.5 milliseconds.
Vibration	50g at 10-2000 Hz

\* Self-resonant frequency and Q are assured with no terminals on parts.

The Voltronics A4 Series unique design using minimal parts simplifies the manufacturing process to effect one of the most economical high performance trimmer capacitors available in the industry. The Voltronics A4 Series also features a high reliability solid dielectric, positive tuning stops and up to 5 full turns of linear tuning in the shortest length of any similar trimmer capacitor. The Voltronics A4 is an ideal choice for tuning and impedance matching, high frequency and high power amplifier circuits.

# A\_HV & E\_HV - High Voltage PTFE Trimmer Capacitors

## The Only Internally-Sealed HV PTFE Trimmers

Voltronics' concentric ring PTFE dielectric trimmer capacitors are designed for use at frequencies up to 1.5 GHz. They are ideal for HIGH VOLTAGE applications. The solid internal PTFE dielectric prevents ionization, a major advantage in space, high altitude and high voltage applications. The unique internal O-ring seal makes wave soldering and vapor degreasing possible without the need to attach a separate cap.

### Available in two styles:

"A\_HV" Series - Solder sealed ceramic body. "E\_HV" Series - Epoxy sealed plastic body.

# NT Series Ultra High Voltage PTFE Trimmer Capacitors

### 4kV to 20kV

Voltronics new "NT" series of PTFE trimmers are designed for applications requiring greater capacitance and voltage ratings than the popular smaller trimmers but without the large size and expense of vacuum capacitors.

### The "NT" Line Offers:

- High voltage
- Non-rotating piston, long life & no tuning noise
- Extremely stable under shock & vibration
- Screw head does not move in & out

Extended Shaft Options:

# AIR/ PTFE Trimmer Capacitors - Lead Styles

Note: All bushing threads are .234" -64

# P Series - High Q Sealed Sapphire Trimmer Capacitors

Voltronics "P" line of sapphire subminiature trimmer capacitors is unique in design. The trimmers have a high Q, zero temperature coefficient, and are internally O-ring sealed to keep out flux and cleaning fluid. Yet, sizes are the same as the MIL unsealed styles. The tuning screw does not move in and out, and RF current does not run along it. Sapphire is ideal for precision trimmer capacitors. Its dielectric constant is extremely stable and the dielectric loss is below 0.0003 over frequencies up to 10GHz. Sapphire is chemically inert, totally moisture resistant, and mechanically strong.

## Other features include:

- High Q, low temperature coefficient, and internal seal
- Low self-inductance for use to 10 GHz
- Interchangeability with unsealed designs
- Long life, no measurable tuning noise

## High Frequency Data

\*This high frequency data was taken on a Boonton Model 34A Resonant Coaxial-line with the parts set at their maximum rated capacitance values. Connections to the parts were made directly on the body of the capacitors.

NOTE: For diameter and length dimensions on Figures 2-7, see figure 1.

# Glass and Quartz Trimmer Capacitors

## Design Features

The unique Voltronics non-rotating precision trimmer capacitor design offers the following advantages over conventional rotating types:

- Linear tuning with no reversals
- A true high frequency device with high Q's, low RF losses, low constant inductance and high self-resonant frequencies
- A superior seal because the screw head and O-ring do not move in and out
- Greater life -10,000 cycles minimum
- Much smaller sealed MIL sizes
- Ability to provide extended metal or plastic shafts

## Dielectric

The dielectric is a tube which has been precision drawn in a vacuum so that its inner diameter is held within  $\pm 0.0002''$ . The choices are:

1. **Annular Band Glass:** A solid tube of a specially selected formulation of glass which is metallized on the outside.
2. **Embedded Band Glass:** Two tubes of glass fired together with a metallized silver band embedded between them. The inner tube is only 0.005" thick to provide much higher capacitance values.
3. **Quartz:** A pure-grade silicon oxide offering higher Q and voltage ratings in each size with the trade-off of lower capacitance and higher cost.

# S Series - Smallest Sealed Glass Trimmer Capacitors

The PC17 styles are the only vertically mounted glass trimmers in MIL-C-14409D.

Voltronics "S" Series are up to 40% shorter with 25% more range than any other sealed standard glass RC. trimmers. The use of Voltronics' unique non-rotating piston design provides linear tuning, high "Q", long life, and high self-resonant frequencies. The O-ring seal assures protection up to 40 p.s.i. against dust, moisture, flux, solder, and cleaning solvents.

# H Series - Extended Range Glass Trimmer Capacitors

The "H" Series increases the standard maximum capacitance values of Voltronics' glass trimmer capacitors by almost 100%. This is achieved by a new and unique technique which makes the wall of the inner glass tube thinner than was previously possible. General specifications for the "H" Series are the same as those of standard embedded band glass trimmers (see Page 18) with the following exceptions:

## Notes:

1. Fig. 2,3 and 4 parts have same end view as Fig. 1.
2. All leads #22 AWG and 2" Min. long except for all TM5-, TM6-, TM10- and QM2- parts which are #24 AWG.
3. Mounting bushing #10-32 x .25 long except for all TM10- and TM15- parts which are #10-32 x .16 long.
4. C diameter of Fig. 1 parts .27 on embedded band units and .25 on all other parts.

## Optional Configuration

### INSULATED BUSHING

Insert "I" Between "T" and "M" in Type Number (ex. TIM9C)

### EXTENDED PLASTIC SHAFT

Add "EI" to End of Type Number (ie., TM9EI)

### EXTENDED METAL SHAFT

Add "E" to End of Type Number (ie., TM9CE)

Note: For sealed versions, add "G" to part number, ie., TM8DG. The "A" dimension will be 0.11" longer.

For a differential trimmer capacitor, the capacitance of one element increases while the other element decreases, with the sum remaining approximately constant.

## Pre-Set Trimmers

Every trimmer in this catalog can be set at a fixed value by Voltronics. This saves you the labor of setting the trimmer and can replace a fixed capacitor. If any part of the circuit drifts with temperature or time, the trimmer can be tuned. This will save not only initial set-up time, but will allow tuning without changing fixed components.

Voltronics trimmers are as stable as fixed capacitors and many are less expensive!

The TT-500 thru TT-900 tuning tools are ideal for continual use. They fit into the hand with the rotatable top fixed in the palm. The tips are made of high strength ceramic. Use these tools where metal tips affect tuning.

# DRO - Microwave Tuners For Dielectric Resonator

These precise tuners provide fine, stable adjustments to microwave components such as cavities, DRO's, wave guides and filters. Applications as diverse as space telemetry to supermarket door openers use these products. The self-locking slots in the threads together with the fine pitch provide reliable, permanent settings. They eliminate the loose fits and low resolution of standard threads. Tuning is smooth with controlled torque and no noise. Bushings, rotors and dielectric rods may be purchased separately. The DRO tuners are sealed either with an O-ring or by a true hermetic solder seal. The many versions of screw tuners are either entirely metallic or with dielectric rods of sapphire, alumina or quartz.

## Tuning Element Taps

Fluted taps are offered for each part because the thread sizes are fine and non-standard.

## Dro Tuners

The Voltronics DRO Tuner design is based upon the proven tuning mechanisms of its trimmer capacitors. The parts have O-ring sealed front ends, long life, positive stops and low loss. The tuners have up to 10 full turns of resolution. The disk diameter ("A" Dim.) can be modified to meet your requirements. The hermetically sealed parts have high temperature solder joints. When soldered into your case, there is a hermetic barrier to the inside of your cavity. The part's O-ring seal keeps moisture and other contaminants from getting inside the tuner.

# Product Guide - Non Magnetic Trimmers

Increasing magnetic resonance applications caused Voltronics to launch an active engineering effort in this field years ago, one that continues today. Due to the severe non-magnetism requirements in these industries, we use only materials that exhibit no measurable magnetism. Commercial brass and plating materials are not acceptable. Our strict traceability and testing regimes insure this essential parameter.

Most of our trimmers are internally sealed so that they withstand immersion in flux and solvents without leaking. Most of our non-magnetic trimmers have been used and tuned at temperatures as low as 4K. Many of our selection of trimmers have been developed for specific customer needs – let us design a high performance trimmer for your application.

# NT Series - Non Magnetic PTFE Trimmer Capacitors

## 4kV to 20kV

### High Voltage Applications

Voltronics new "NT" series of PTFE trimmers are designed for applications requiring greater capacitance and voltage ratings than the popular smaller trimmers but without the large size and expense of vacuum capacitors.

#### Other features include:

- High voltage
- Non-rotating piston, long life & no tuning noise
- Extremely stable under shock & vibration
- Screw head does not move in and out

# V9000 - Non Magnetic PTFE Trimmer Capacitor

The V9000 trimmer capacitor is a unique design: truly sub miniature at just 0.64" in length, but offers the highest working voltage rating, of 2kV and capacitance value, up to 12pF, available in its size. Using a Sapphire dielectric, for its ideal dielectric constant, it is extremely stable, is chemically inert, moisture resistant and mechanically strong. Recently launched, additional features are still under development, contact Voltronics for our usual custom modifications and adaptations.

# Product Guide - Non Magnetic High Q Multilayer Capacitors

Made from highly stable, low loss dielectric formulations, these traditional porcelain MLCs are known for their high RF power handling capability. Available in all industry common case sizes. The special silver-palladium termination and the proprietary ceramic formulations guarantee consistent non-magnetic performance. All MLCs in these series are RoHS compliant. Chips are available either with standard termination or can be fitted with ribbon leads, depending on your application.

## Description

# Non Magnetic High Q Multilayer Capacitors

## Recommended Procedure for Hand Soldering Chip Capacitors

Equipment: Weller Ec-2001 soldering system (42 watt) or equivalent (1/8" tip) for 11 Series, (1/4" tip) for 25 Series or (3/8" tip) for 38 Series  
310 ± 10 degrees C tip temperature

Solder: Sn60/Sn62/Sn36

Flux: Alpha 611 type RMA or equivalent

Cleaning Solvents: 2-propanol or commercial defluxing solvent

Procedure:

1. Preheat chip and stripline to 100-120°C for a minimum of one minute. If solder other than the above is used, preheat to within 50-70°C of reflow temperature.
2. Dip chip in flux for 2-3 seconds, or apply flux to chip and stripline area. Apply solder paste if necessary.
3. Place iron on stripline for three seconds to preheat, then move slowly to contact chip for approximately four seconds to effect reflow.
4. When reflow is achieved, withdraw iron slowly, allow to cool naturally.
5. Clean area thoroughly, with 2-propanol or other defluxing solvent. If possible, use ultrasonic cleaning for these steps.
6. Inspect solder fillet for coverage and defects.

All parts are constructed to be compatible with commonly used industry methods. Reflow soldering, wave soldering, vapor phase soldering ("S" termination) and conductive epoxy ("R" termination) may be used.

## Cleaning

Chip capacitors can withstand commonly used cleaning agents such as water, alcohol, and degreaser solvents. Ascertain that no flux residues are left on the chip surfaces and no flux is trapped under the chip. Flux residue will degrade Q, insulation resistance and reliability.

## Shelf Life

Capacitors will be solderable for a minimum of one year from date of shipment if properly stored in the original packaging. Dry nitrogen storage is preferable for longer periods.

## Precautions

The rate of heating and cooling must be controlled to preclude thermal cracking of the devices. Processes, heating or cooling, should not exceed a rate of 20000 per minute. Spikes must not exceed 100°C maximum for any solder operation. Avoid forced cooling or contact with heat sinks, such as conveyor belts, metal tables or cleaning solutions, before the chips reach ambient temperatures.

## Why Rounded Corners?

Rounded corners provide uniform termination on these MLC products. The greater surface area improves solder attachment and provides a more uniform adhesion to the board. Rounded corners also reduce the chance of tomb-stoning and mechanical thermal shock types of stress.

# Product Guide - Non Magnetic Coils

To further support our magnetic resonance customers around the world, Voltronics supplies a comprehensive line of totally non-magnetic air coil inductors and potted inductors. In concert with our ISO9001 approved partner, Voltronics can also supply your BALanced UNbalanced transformer coil requirements. We understand that each application is unique. We ask that you provide us with your drawings or samples of your coils and we will provide a quote and samples in two weeks. When your application requires high performance non-magnetic components, think first of Voltronics.

Consult Factory for Specific Requirements

# Non Magnetic Diodes

In support of our magnetic resonance customers around the world, Voltronics now offers a comprehensive line of non-magnetic diodes. With our ISO9001 approved partner, Voltronics wants to be your diode design partner for your future unique needs and your reliable supplier of your current requirements. Our comprehensive capabilities include PIN diodes, dual diodes, Schottky diodes, and more. When your application requires high performance non-magnetic components, think first of Voltronics.

## RF Actuated Diode Switch

The MX51363-145 is designed to be used as a surface coil blocking network. The part consists of four step recovery diodes, connected as two anti parallel pairs.

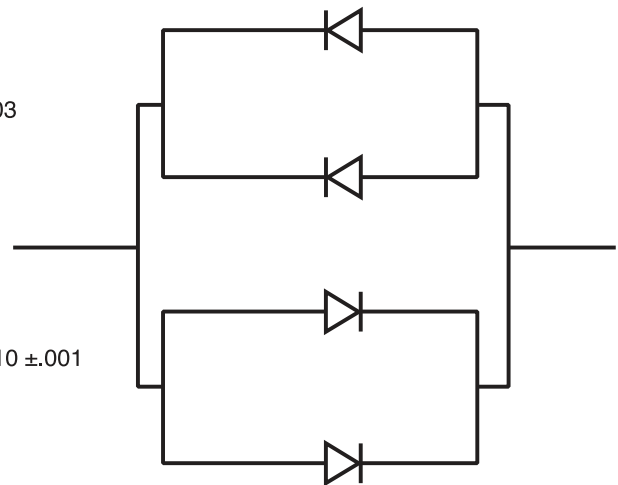

### Specifications:

Total junction capacitance plus package capacitance, measured with an RF source voltage less than or equal to 71 mV RMS at 50 MHz and no DC bias, shall not exceed 3.5pF.

Q equal to or greater than 1,000.

Thermal resistance not to exceed 60°C / Watt

Maximum junction operating temperature shall be 125°C

$I_{RMS}$	100 milliamps maximum
Saturation Current	Less Than 50 milliamps
Minority Carrier Lifetime	24 nanoseconds (nominal)

# Non Magnetic Hardware

Due to the severe non-magnetism requirements in the magnetic resonance industries, we use only high purity metals that exhibit no measurable magnetism. Commercial brass is simply not acceptable for these applications. Our strict traceability and testing regimes insure this essential parameter.

We can offer sizes, styles, and lengths beyond those shown in the tables on these pages – such as Cheese Head, Round Head, and set screws. We also offer flat washers to complete your needs.

Coils also require inserts, pins, and other special shapes that are custom-designed to satisfy the specific requirements of the coil designer. The ability to quickly and precisely supply custom designs is part of our heritage and we are eager to sample our high quality hardware based on your requirements. As with the screws, washers, and nuts on this and the preceding page, we use only high purity metals that exhibit no measurable magnetism.
