

### THIS SPEC IS OBSOLETE

Spec No: 002-06635

Spec Title: MB89470 Series, F2MC-8L 8-bit Proprietary Microcontroller

Replaced by: NONE

The following document contains information on Cypress products. The document has the series name, product name, and ordering part numbering with the prefix "MB". However, Cypress will offer these products to new and existing customers with the series name, product name, and ordering part number with the prefix "CY".

#### **How to Check the Ordering Part Number**

- 1. Go to <a href="https://www.cypress.com/pcn">www.cypress.com/pcn</a>.
- 2. Enter the keyword (for example, ordering part number) in the **SEARCH PCNS** field and click **Apply**.
- 3. Click the corresponding title from the search results.
- 4. Download the Affected Parts List file, which has details of all changes

#### For More Information

Please contact your local sales office for additional information about Cypress products and solutions.

#### **About Cypress**

Cypress is the leader in advanced embedded system solutions for the world's most innovative automotive, industrial, smart home appliances, consumer electronics and medical products. Cypress' microcontrollers, analog ICs, wireless and USB-based connectivity solutions and reliable, high-performance memories help engineers design differentiated products and get them to market first. Cypress is committed to providing customers with the best support and development resources on the planet enabling them to disrupt markets by creating new product categories in record time. To learn more, go to www.cypress.com.

The following document contains information on Cypress products. Although the document is marked with the name "Spansion" and "Fujitsu", the company that originally developed the specification, Cypress will continue to offer these products to new and existing customers.

#### **Continuity of Specifications**

There is no change to this document as a result of offering the device as a Cypress product. Any changes that have been made are the result of normal document improvements and are noted in the document history page, where supported. Future revisions will occur when appropriate, and changes will be noted in a document history page.

#### **Continuity of Ordering Part Numbers**

Cypress continues to support existing part numbers. To order these products, please use only the Ordering Part Numbers listed in this document.

#### For More Information

Please contact your local sales office for additional information about Cypress products and solutions.

#### **About Cypress**

Cypress (NASDAQ: CY) delivers high-performance, high-quality solutions at the heart of today's most advanced embedded systems, from automotive, industrial and networking platforms to highly interactive consumer and mobile devices. With a broad, differentiated product portfolio that includes NOR flash memories, F-RAM™ and SRAM, Traveo™ microcontrollers, the industry's only PSoC® programmable system-on-chip solutions, analog and PMIC Power Management ICs, CapSense® capacitive touch-sensing controllers, and Wireless BLE Bluetooth® Low-Energy and USB connectivity solutions, Cypress is committed to providing its customers worldwide with consistent innovation, best-in-class support and exceptional system value.

# 8-bit Proprietary Microcontroller

# F2MC-8L MB89470 Series

# MB89475/P475/PV470

#### **■ DESCRIPTION**

The MB89470 series has been developed as a general-purpose version of the F<sup>2</sup>MC\*-8L family consisting of proprietary 8-bit, single-chip microcontrollers.

In addition to a compact instruction set, the microcontroller contains a variety of peripheral functions such as 21-bit time-base timer, watch prescaler, PWC timer, PWM timer, 8/16-bit timer/counter, external interrupt 1 (edge), external interrupt 2 (level), 10-bit A/D converter, UART/SIO, buzzer, watchdog timer reset.

The MB89470 series is designed suitable for home appliance as well as in a wide range of applications for consumer product.

\*: F<sup>2</sup>MC is the abbreviation of FUJITSU Flexible Microcontroller.

#### **■ FEATURES**

Package used
 QFP package, LQFP package and SH-DIP package for MB89P475, MB89475
 MQFP package for MB89PV470

(Continued)

For the information for microcontroller supports, see the following web site.

http://edevice.fujitsu.com/micom/en-support/

#### (Continued)

- High-speed operating capability at low voltage
- Minimum execution time: 0.32 μs/12.5 MHz
- F<sup>2</sup>MC-8L family CPU core

Instruction set optimized for controllers

Multiplication and division instructions 16-bit arithmetic operations Bit test and branch instructions Bit manipulation instructions, etc.

· Six timers

PWC timer (also usable as an interval timer)

PWM timer

8/16-bit timer/counter × 2

21-bit timebase timer

Watch prescaler

• Buzzer

7 frequency types are selectable by software

External interrupts

Edge detection (Selectable edge): 4 channels
Low-level interrupt (Wake-up function): 5 channels

A/D converter (8 channels)

10-bit successive approximation type

• UART/SIO

Synchronous/asynchronous data transfer capable

• Low-power consumption modes

Stop mode (Oscillation stops to minimize the current consumption.)

Sleep mode (The CPU stops to reduce the current consumption to approx. 1/3 of normal.)

Subclock mode (for dual clock product)

Watch mode (for dual clock product)

- Watchdog timer reset
- I/O ports : Max 39 channels

### ■ PRODUCT LINEUP

Classification  ROM size	Mass production products (mask ROM product)  16 K × 8-bit (internal ROM)	OTP  16 K × 8-bit (internal PROM, can be written to by ROM	Piggy-back				
ROM size							
	512 ×	programmer)	32 K × 8-bit (external ROM)				
RAM size	OIZX	8 bits	1 K × 8 bits				
CPU functions	Number of instructions nstruction bit length nstruction length Data bit length Minimum execution time Minimum interrupt processing	time	: 136 : 8 bits : 1 to 3 bytes : 1, 8, 16 bits : 0.32 μs/12.5 MHz : 2.88 μs/12.5 MHz				
Ports II	Output-only ports (N-channel nput-only ports /O ports (CMOS) Total	open drain)	: 7 pins : 3 pins (1 pin in product with dual clock) : 29 pins : 39 pins				
	Interrupt period (0.82 ms, 3.3 ms, 26.2 ms, 419.4 ms) at 10 MHz Interrupt period (0.66 ms, 2.6 ms, 21.0 ms, 335.5 ms) at 12.5 MHz						
	Reset period (209.7 ms to 419.4 ms) at 10 MHz Reset period (167.8 ms to 335.5 ms) at 12.5 MHz						
I Watch prescaler	17 bits Interrupt cycle : 31.25 ms, 0.25 ms, 0.5 s, 1.00 s, 2.00 s, 4.00 s/32.768 kHz for subclock						
Pulse width count timer 3	2 channels 8-bit one-shot timer operation (supports underflow output, operating clock period: 1, 4, 32 tinst*, external) 8-bit reload timer operation (supports square wave output, operating clock period: 1, 4, 32 tinst*, external) 8-bit pulse width measurement operation (supports continuous measurement, H width, L width, rising edge to rising edge, falling edge to falling edge measurement and both edge measurement)						
PWM timer 3	8-bit reload timer operation (supports square wave output, operating clock period : 1, 4, 32 t <sub>inst</sub> *, external) 8-bit resolution PWM operation						
8/16-bit timer/ it counter 1, 2	Can be operated either as a 2-channel 8-bit timer/counter (Timer 1 and Timer 2, each with its own independent operating clock cycle), or as one 16-bit timer/counter In Timer 1 or 16-bit timer/counter operation, event counter operation (external clock-triggered) and square wave output capable						
8/16-bit timer/ it counter 3, 4	Can be operated either as a 2-channel 8-bit timer/counter (Timer 3 and Timer 4, each with its own independent operating clock cycle), or as one 16-bit timer/counter In Timer 3 or 16-bit timer/counter operation, event counter operation (external clock-triggered) and square wave output capable						
I E VIAINAL INTAITIINT	1 independent channels (sele 5 channels (low level interrup	ctable edge, interrupt vector, it)	request flag)				

#### (Continued)

Part number Parameter	MB89475	MB89P475	MB89PV470				
A/D converter	10-bit resolution × 8 channels A/D conversion function (conversion time : 60 t <sub>inst</sub> *) Supports repeated activation by internal clock.						
UART/SIO	Synchronous/asynchronous data transfer capable (Max baud rate : 78.125 Kbps at 10 MHz) (7 and 8 bits with parity bit ; 8 and 9 bits without parity bit)						
Buzzer output	7 frequency types (FcH/2 <sup>12</sup> , FcH/2 <sup>11</sup> , FcH/2 <sup>10</sup> , FcH/2 <sup>9</sup> , FcL/2 <sup>5</sup> , FcL/2 <sup>4</sup> , FcL/2 <sup>3</sup> ) are selectable by software.						
Standby mode	Sleep mode, stop mode, subclock mode (dual clock product) and watch mode (dual clock product)						
Process	CMOS						
Operating Voltage	2.2 V to 5.5 V	3.5 V to 5.5 V	2.7 V to 5.5 V				

<sup>\*:</sup> tinst is one instruction cycle (execution time), which can be selected as 1/4, 1/8, 1/16, or 1/64 of main clock.

#### ■ PACKAGE AND CORRESPONDING PRODUCTS

Part number Package	MB89475	MB89P475	MB89PV470
DIP-48P-M01	0	0	Х
FPT-48P-M26	0	0	Х
FPT-48P-M13	0	0	Х
MQP-48C-P01	X	X	0

O : Available X : Not available

#### **■ DIFFERENCES AMONG PRODUCTS**

#### 1. Memory Size

Before evaluating using the piggyback product, verify its differences from the product that will actually be used. Take particular care on the following point:

• The stack area, etc., is set at the upper limit of the RAM.

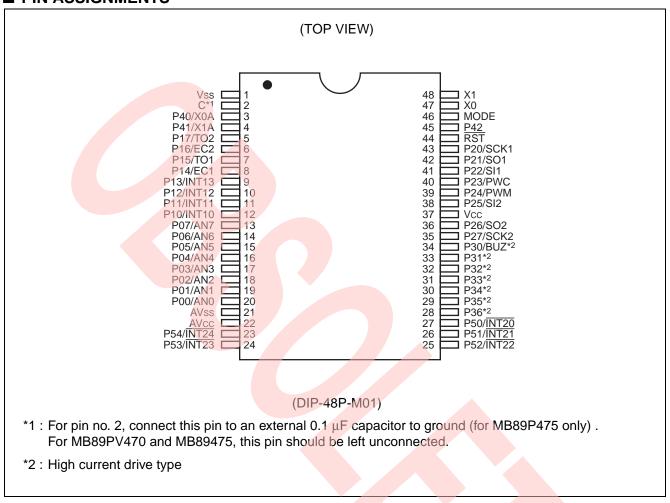

#### 2. Current Consumption

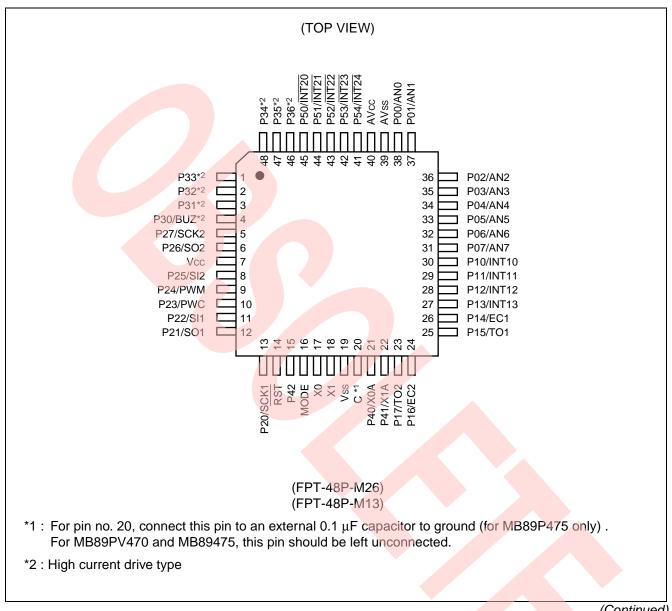

- For the MB89PV470, add the current consumed by the EPROM mounted in the piggy-back socket.
- When operating at low speed, the current consumed by the one-time PROM product is greater than that for the mask ROM product. However, the current consumption are roughly the same in sleep or stop mode.
- For more information, see "■ ELECTRICAL CHARACTERISTICS".

#### 3. Oscillation stabilization time after power-on reset

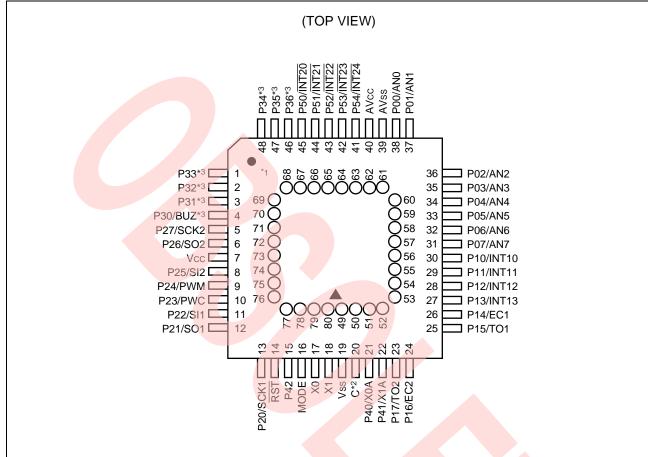

- For MB89PV470, there is no power-on stabilization time after power-on reset.
- For MB89P475, there is power-on stabilization time after power-on reset.
- For MB89475, the power-on stabilization time can be select.
- For more information, refer to "■ MASK OPTIONS".

#### **■ PIN ASSIGNMENTS**

#### (Continued)

(MQP-48C-P01)

\*1 : Package upper-side pin assignment ( MB89PV470 only)

Pin no.	Pin name						
49	$V_{pp}$	57	N.C.	65	04	73	ŌE
50	A12	58	A2	66	O5	74	N.C.
51	A7	59	A1	67	O6	75	A11
52	A6	60	A0	68	07	76	A9
53	A5	61	O1	69	O8	77	A8
54	A4	62	O2	70	CE	78	A13
55	А3	63	O3	71	A10	79	A14
56	N.C.	64	Vss	72	N.C.	80	Vcc

N.C.: As connected internally, do not use.

\*2 : Pin no. 20 should be left unconnected.

\*3: High current drive type

#### **■ PIN DESCRIPTION**

Pin no.					
LQFP/QFP/ MQFP*2	SDIP*1	Pin name	I/O circuit	Function	
17	47	X0		Connection pins for a crystal or other oscillator.	
18	48	X1	A	An external clock can be connected to X0. In this case, leave X1 open.	
16	46	MODE	В	Input pins for setting the memory access mode. Connect directly to Vss.	
14	44	RST	С	Reset I/O pin. The pin is a N-ch open-drain type with pull-up resistor and a hysteresis input. The pin outputs an "L" level when an internal reset request is present. Inputting an "L" level initializes internal circuits.	
38 to 31	20 to 13	P00/AN0 to P07/AN7	D	General-purpose I/O port. The pins are shared with the analog inputs for the A/D converter.	
30 to 27	12 to 9	P10/INT10 to P13/INT13	E	General-purpose I/O port.  A hysteresis input for INT10 to INT13.  The pin is shared with an external interrupt 1 input.	
26	8	P14/EC1	E	General-purpose I/O port.  A hysteresis input for EC1.  The pin is shared with the 8/16 bit timer 1 input.	
25	7	P15/TO1	F	General-purpose I/O port.  The pin is shared with the output of 8/16-bit timer 1.	
24	6	P16/EC2	Е	General-purpose I/O port. A hysteresis input for EC2. The pin is shared with the 8/16 bit timer 2 input.	
23	5	P17/TO2	F	General-purpose I/O port. The pin is shared with the output of 8/16-bit timer 2.	
13	43	P20/SCK1	Е	General-purpose I/O port. A hysteresis input for SCK1. The pin is shared with the clock I/O of UART/SIO 1.	
12	42	P21/SO1	F	General-purpose I/O port.  The pin is shared with the serial data output of UART/SIO 1.	
11	41	P22/SI1	Е	General-purpose I/O port. A hysteresis input for SI1. The pin is shared with the serial data input of UART/SIO 1.	
10	40	P23/PWC	E	General-purpose I/O port. A hysteresis input for PWC. This pin is shared with PWC input.	
9	39	P24/PWM	F	General-purpose input port. This pin is shared with PWM output.	
8	38	P25/SI2	Е	General-purpose I/O port. A hysteresis input for SI2. The pin is shared with the serial data input of UART/SIO 2.	

Pin no.			I/O		
LQFP/QFP/ MQFP*2	SDIP*1	Pin name	circuit	Function	
6	36	P26/SO2	F	General-purpose I/O port.  The pin is shared with the serial data output of UART/SIO 2.	
5	35	P27/SCK2	E	General-purpose I/O port. A hysteresis input for SCK2. The pin is shared with the clock I/O of UART/SIO 2.	
4	34	P30/BUZ	G	N-channel open-drain output. The pin is shared with buzzer output.	
3 to 1, 48 to 46	33 to 28	P31 to P36	G	N-channel open-drain output.	
			Н	General-purpose input port. (single clock system)	
21	3	P40/X0A	А	Connection pins for a crystal or other oscillator. (dual clock system)  An external clock can be connected to X0A. In this case, leave X1A open.	
			Н	General-purpose input port. (single clock system)	
22	4	P41/X1A	Connection pins for a crystal or other oscillator. (dual clock syst An external clock can be connected to X0A. In this case, leave X open.		
15	45	P42	Н	General-purpose input port.	
45 to 41	27 to 23	P50/INT20 to P54/INT24	E	General-purpose I/O port. A hysteresis input for INT20 to INT24. The pin is shared with an external interrupt 2 input.	
20	2	С	_	Capacitor connection pin *3	
7	37	Vcc	_	Power supply pin (+5 V) .	
19	1	Vss		Power supply pin (GND) .	
40	22	AVcc		A/D converter power supply pin.	
39	21	AVss		A/D converter power supply pin. Use at the same voltage level as Vss.	

<sup>\*1:</sup> DIP-48P-M01

<sup>\*2:</sup> FPT-48P-M26/FPT-48P-M13/MQP-48C-P01

 $<sup>^*3</sup>$ : When MB89475 or MB89PV470 is used, this pin will become a N.C. pin without internal connection. When MB89P475 is used, connect this pin to an external 0.1  $\mu$ F capacitor to ground.

#### • External EPROM Socket (MB89PV470 only)

Pin no.	Pin	JOCKEL (INIDA	Function		
MQFP*	name	I/O	Function		
49	$V_{pp}$	0	"H" level output pin		
50 51 52 53 54 55 58 59 60	A12 A7 A6 A5 A4 A3 A2 A1 A0	0	Address output pins.		
61 62 63	O1 O2 O3		Data input pins.		
64	Vss	0	Power supply pin (GND) .		
65 66 67 68 69	O4 O5 O6 O7 O8		Data input pins.		
70	CE	0	Chip enable pin for the ROM. Outputs "H" in standby mode.		
71	A10	0	Address output pin.		
73	ŌE	0	Output enable pin for the ROM. Always outputs "L".		
75 76 77 78 79	A11 A9 A8 A13 A14	0	Address output pins.		
80	Vcc	0	Power supply pin for the EPROM.		
56 57 72 74	N.C.	_	Internally connected pins. Always leave open.		

<sup>\*:</sup> MQP-48C-P01

### ■ I/O CIRCUIT TYPE

#### **■ HANDLING DEVICES**

#### 1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than V<sub>CC</sub> or lower than V<sub>SS</sub> is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on "1. Absolute Maximum Ratings" in "■ ELECTRICAL CHARACTERISTICS" is applied between V<sub>CC</sub> and V<sub>SS</sub>.

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply (AVcc) and analog input from exceeding the digital power supply (Vcc) when the analog system power supply is turned on and off.

#### 2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

#### 3. Treatment of Power Supply Pins on Microcontrollers with A/D Converter

Connect to be AVcc = Vcc and AVss = Vss even if the A/D converter is not in use.

#### 4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

#### 5. Power Supply Voltage Fluctuations

Although Vcc power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that Vcc ripple fluctuations (P-P value) will be less than 10% of the standard Vcc value at the commercial frequency (50 Hz to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

#### 6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset (optional) and wake-up from stop mode.

#### 7. Note to noise in the External Reset Pin (RST)

If the reset pulse applied to the external reset pin  $(\overline{RST})$  does not meet the specifications, it may cause malfunctions. Use causion so that the reset pulse less than the specifications will not be fed to the external reset pin  $(\overline{RST})$ .

#### ■ PROGRAMMING OTPROM IN MB89P475 WITH SERIAL PROGRAMMER

#### 1. Programming the OTPROM with serial programmer

• All OTP products can be programmed with serial programmer.

#### 2. Programming the OTPROM

• To program the OTPROM using FUJITSU MCU programmer MB91919-001.

Inquiry : Fujitsu Microelectronics Asia Pte Ltd. : TEL (65) -2810770

FAX (65) -2810220

#### 3. Programming Adapter for OTPROM

• To program the OTPROM using FUJITSU MCU programmer MB91919-001, use the programming adapter listed below.

Package	Compatible socket adapter	
DIP-48P-M01		MB91919-805+MB91919-800
FPT-48P-M26		MB91919-806+MB91919-800
FPT-48P-M13		MB91919-807+MB91919-800

Inquiry : Fujitsu Microelectronics Asia Pte Ltd. : TEL (65) -2810770

FAX (65) -2810220

#### 4. OTPROM Content Protection

For product with OTPROM content protection feature (MB89P475-102, MB89P475-202), OTPROM content can be read using serial programmer if the OTPROM content protection mechanism is not activated.

One predefined area of the OTPROM (FFFC<sub>H</sub>) is assigned to be used for preventing the read access of OTPROM content. If the protection code "00<sub>H</sub>" is written in this address (FFFC<sub>H</sub>), the OTPROM content cannot be read by any serial programmer.

Note: The program written into the OTPROM cannot be verified once the OTPROM protection code is written ("00H" in FFFCH). It is advised to write the OTPROM protection code at last.

#### 5. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

#### ■ PROGRAMMING OTPROM IN MB89P475 WITH PROGRAMMER

#### 1. Programming OTPROM with parallel programmer

• Only products without protection feature (i.e. MB89P475-101 and MB89P475-201) can be programmed with parallel programmer. Product with protection feature (i.e. MB89P475-102 and MB89P475-202) cannot be programmed with parallel programmer.

#### 2. ROM Writer Adapters and Recommended ROM Writers

• The following shows ROM writer adapters and recommended ROM writers.

Fujitsu Microelectronics Asia Pte Ltd. (Serial programmer)

Package	Applicable adapter model	Recommended writer
DIP-48P-M01	MB91919-601	
FPT-48P-M26	MB91919-602	MB91919-001
FPT-48P-M13	MB91919-603	

Inquiries : Fujitsu Microelectronics Asia Pte Ltd. : TEL (65) -2810770 Writing data to the OTPROM

- (1) Set the OTPROM writer for the CU50-OTP (device code : cdB6DC) .
- (2) Load the program data to the OTPROM writer.
- (3) Write data using the OTPROM writer.

#### 3. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

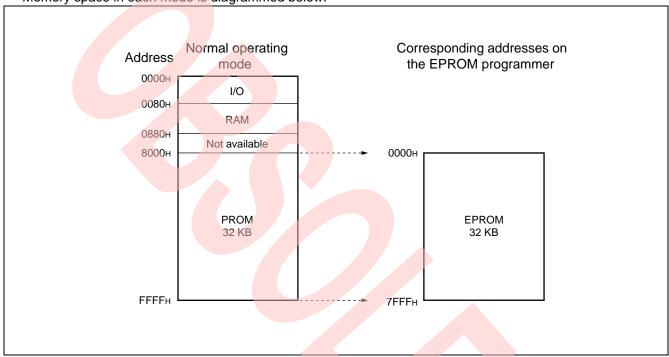

#### ■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

#### 1. EPROM for Use

MBM27C256A-20TVM

#### 2. Memory Space

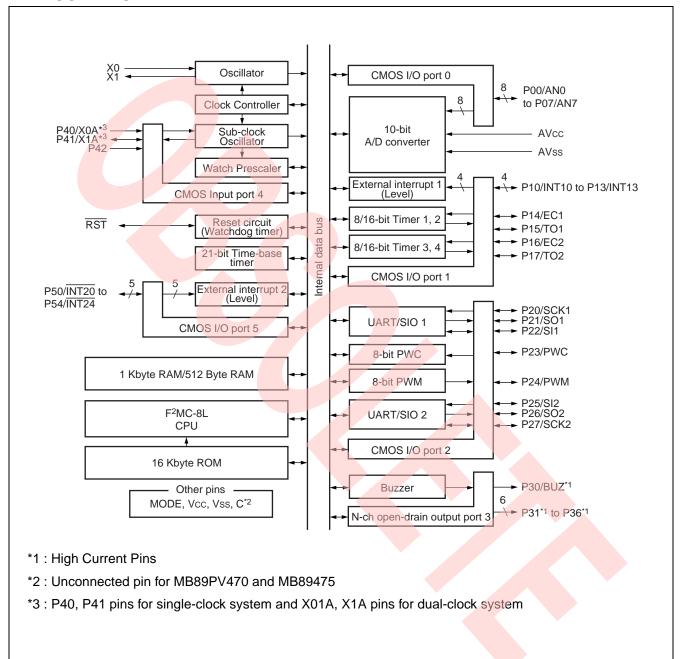

Memory space in each mode is diagrammed below.

#### 3. Programming to the EPROM

- (1) Set the EPROM programmer to the MBM27C256.
- (2) Load program data into the EPROM programmer at 0000 to 7FFFH.
- (3) Program to 0000H to 7FFFH with the EPROM programmer.

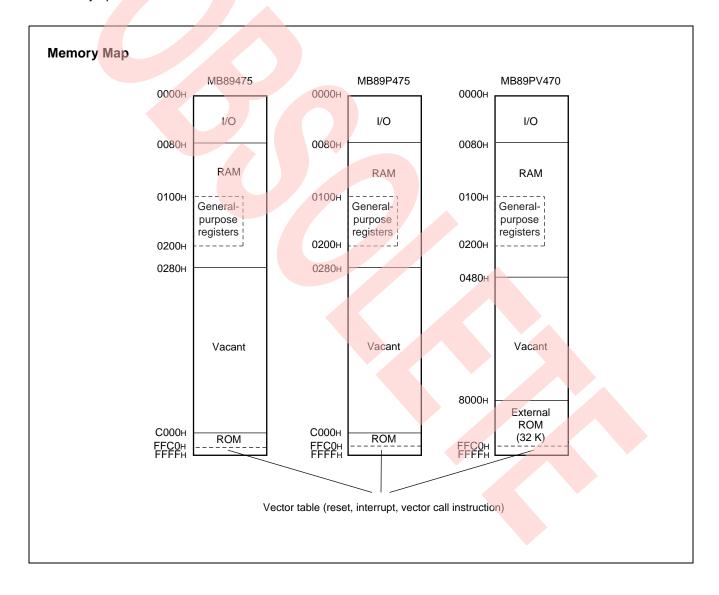

#### ■ BLOCK DIAGRAM

#### **■ CPU CORE**

#### 1. Memory Space

The microcontrollers of the MB89470 series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located at the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89470 series is structured as illustrated below.

#### 2. Registers

The F<sup>2</sup>MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following registers are provided:

Program counter (PC) : A 16-bit register for indicating instruction storage positions

Accumulator (A) : A 16-bit temporary register for storing arithmetic operations, etc. When the

instruction is an 8-bit data processing instruction, the lower byte is used.

Temporary accumulator (T) : A 16-bit register which performs arithmetic operations with the accumulator.

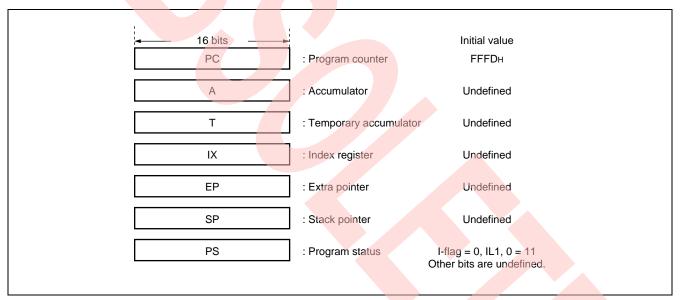

When the instruction is an 8-bit data processing instruction, the lower byte is

used.

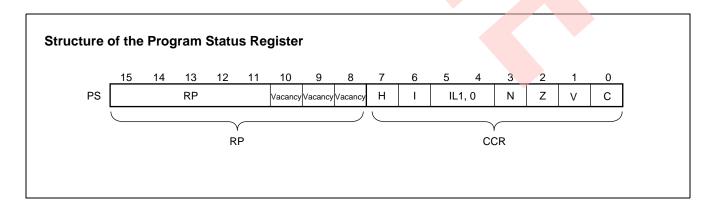

Index register (IX) : A 16-bit register for index modification

Extra pointer (EP) : A 16-bit pointer for indicating a memory address
Stack pointer (SP) : A 16-bit register for indicating a stack area

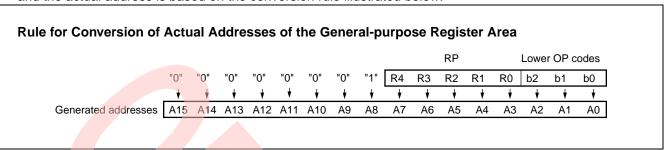

Program status (PS) : A 16-bit register for storing a register pointer, a condition code

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

H-flag: Set when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared otherwise. This flag is for decimal adjustment instructions.

I-flag: Interrupt is allowed when this flag is set to 1. Interrupt is prohibited when the flag is set to 0. Set to 0 when reset.

IL1, 0: Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	IL0	Interrupt level	High-low
0	0	1	High
0	1		<u>†</u>
1	0	2	<b>\</b>
1	1	3	Low = no interrupt

N-flag: Set if the MSB is set to 1 as the result of an arithmetic operation. Cleared when the bit is set to 0.

Z-flag: Set when an arithmetic operation results in 0. Cleared otherwise.

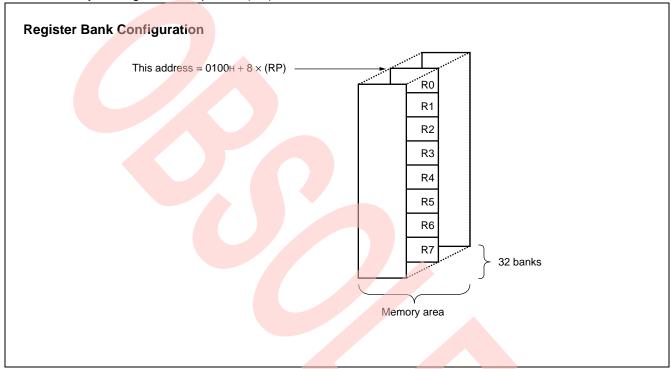

V-flag: Set if the complement on 2 overflows as a result of an arithmetic operation. Reset if the overflow does not occur.

C-flag: Set when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared otherwise. Set to the shift-out vallue in the case of a shift instruction.

The following general-purpose registers are provided :

General-purpose registers : An 8-bit resister for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers. Up to a total of 32 banks can be used on the MB89470 series. The bank currently in use is indicated by the register bank pointer (RP) .

### ■ I/O MAP

Address	Register name	Register Description	Read/Write	Initial value
00н	PDR0	Port 0 data register	R/W	XXXXXXXXB
01н	DDR0	Port 0 data direction register	W*	0000000в
02н	PDR1	Port 1 data register	R/W	XXXXXXXXB

#### • Read/write access symbols

R/W : Readable and writable

R : Read-only W : Write-only

#### • Initial value symbols

The initial value of this bit is "0".The initial value of this bit is "1".

X : The initial value of this bit is undefined.

- : Unused bit.

M: The initial value of this bit is determined by mask option.

#### **■ ELECTRICAL CHARACTERISTICS**

#### 1. Absolute Maximum Ratings

(AVss = Vss = 0.0 V)

Parameter	Symbol	Va	lue	Unit	Remarks
Parameter	Symbol	Min	Max	Unit	Remarks
Power supply voltage	Vcc AVcc	Vss - 0.3	Vss + 6.0	V	AVcc must not exceed Vcc
Input voltage	Vi	Vss - 0.3	Vcc + 0.3	V	
Output voltage	Vo	Vss - 0.3	Vcc + 0.3	V	
"L" level maximum output current	loL	_	15	mA	
"L" level average output current	lolav1		4	mA	Average value (operating current × operating rate) P00 to P07, P10 to P17, P20 to P27, P50 to P54, RST
	lolav2	_	12	mA	Average value (operating current × operating rate) P30 to P36
"L" level total maximum output current	ΣΙοι	_	100	mA	
"L" level total average output current	ΣIOLAV		40	mA	Average value (operating current × operating rate)
"H" level maximum output current	Іон		-15	mA	
"H" level average output current	Іонаv		-2	mA	Average value (operating current × operating rate)
"H" level total maximum output current	ΣІон	_	-50	mA	
"H" level total average output current	ΣΙομαν	_	-20	mA	Average value (operating current × operating rate)
Power consumption	PD		300	mW	
Operating temperature	TA	-40	+85	°C	
Storage temperature	Tstg	-55	+150	°C	

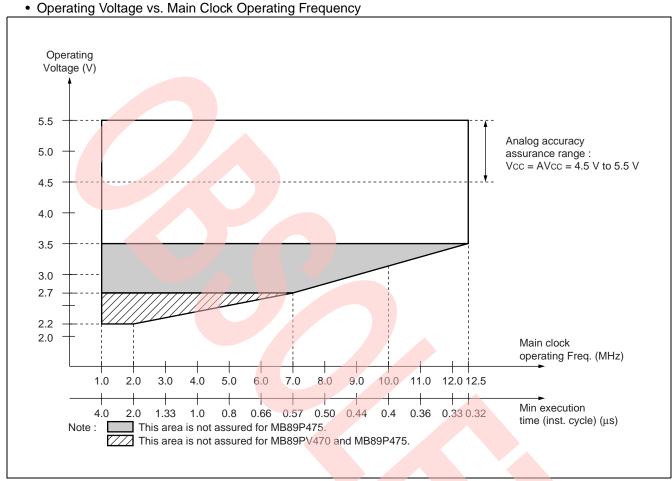

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

#### 2. Recommended Operating Conditions

(AVss = Vss = 0.0 V)

Parameter	Symbol	Va	lue	Unit	Remarks		
rarameter	Syllibol	Min	Max	Oilit			
	Vcc AVcc	2.2*	5.5	V	Operation assurance range	MB89475	
Power supply voltage		3.5*	5.5	V	Operation assurance range	MB89P475	
rower supply voltage		2.7*	5.5	V	Operation assurance range	MB89PV470	
		1.5	5.5	V	Retains the RAM state in stop mode		
Operating temperature	TA	-40	+85	°C			

<sup>\*:</sup> These values depend on the operating conditions and the analog assurance range. See "Operating Voltage vs. Main Clock Operating Frequency" and "5. A/D Converter Electrical Characteristics."

"Operating Voltage vs. Main Clock Operating Frequency" indicates the operating frequency of the external oscillator at an instruction cycle of 4/Fcн.

Since the operating voltage range is dependent on the instruction cycle, see minimum execution time if the operating speed is switched using a gear.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

#### 3. DC Characteristics

(AVcc = Vcc = 5.0 V, AVss = Vss = 0.0 V,  $T_A = -40$  °C to +85 °C)

\*: For information on tinst, see "(4) Instruction Cycle."

#### 5. A/D Converter Electrical Characteristics

#### (1) A/D Converter Electrical Characteristics

(AVcc = Vcc = 4.5 V to 5.5 V, AVss = Vss = 0.0 V,  $T_A = -40$  °C to +85 °C)

Parameter	Symbol	Pin	Value		Unit	Remarks	
raiailletei	Syllibol	DOI FIN	Min	Тур	Max	Uill	Remarks
Resolution			_	10	_	bit	
Total error			_	_	±4.0	LSB	
Linearity error				_	±2.5	LSB	
Differential linearity error			_	_	±1.9	LSB	
Zero transition voltage	Vот		AVss – 1.5 LSB	AVss + 0.5 LSB	AVss + 2.5 LSB	V	
Full-scale transition voltage	VFST		AVcc – 4.5 LSB	AVcc – 2.5 LSB	AVcc – 0.5 LSB	V	
A/D mode conversion time				_	60 t <sub>inst</sub> *	μs	
Analog port input current	AIN	AN0 to		_	10	μΑ	
Analog input voltage	Vain	AN7	AVss	_	AVcc	V	

<sup>\*:</sup> For information on tinst, see " (4) Instruction Cycle" in "4. AC Characteristics".

### (2) A/D Converter Glossary

Resolution

Analog changes that are identifiable with the A/D converter

When the number of bits is 10, analog voltage can be divided into  $2^{10} = 1024$ .

• Linearity error (unit : LSB)

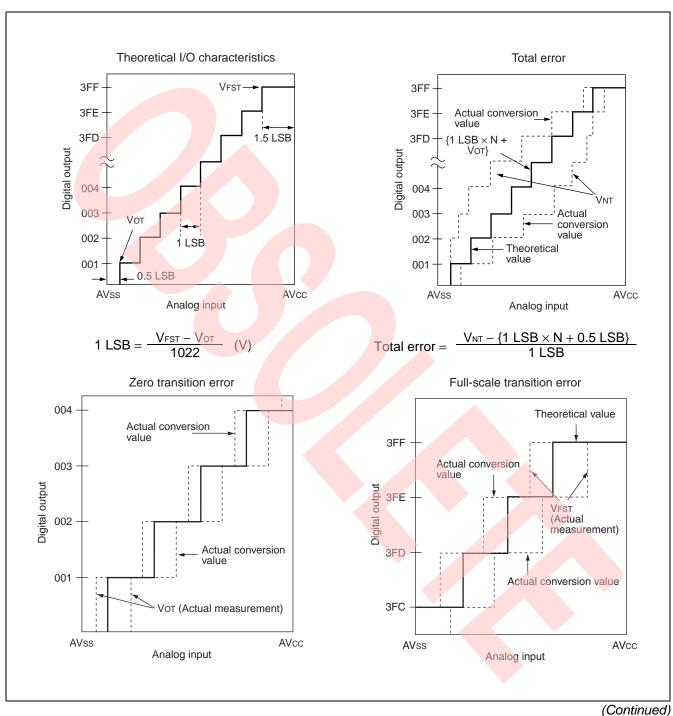

The deviation of the straight line connecting the zero transition point ("00 0000 0000"  $\leftrightarrow$  "00 0000 0001") with the full-scale transition point ("11 1111 1111"  $\leftrightarrow$  "11 1111 1110") from actual conversion characteristics.

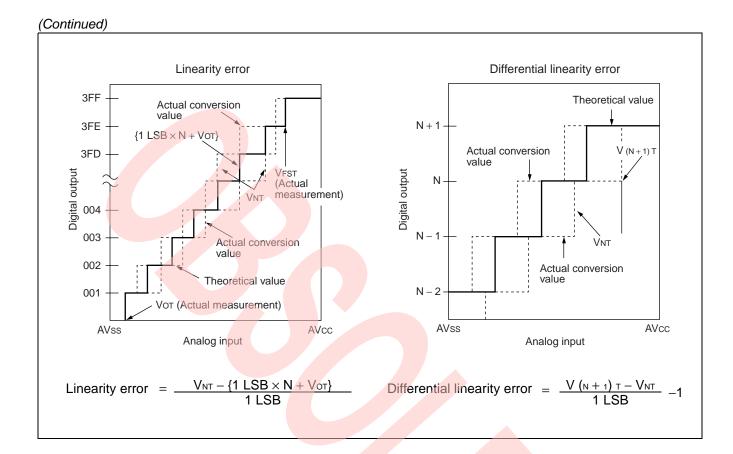

• Differential linearity error (unit : LSB)

The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value.

• Total error (unit : LSB)

The difference between theoretical and actual conversion values.

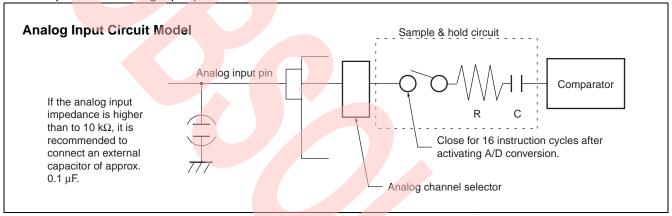

### (3) Notes on Using A/D Converter

• Input impedance of the analog input pins

The A/D converter used for the MB89470 series contains a sample & hold circuit as illustrated below to fetch analog input voltage into the sample & hold capacitor for 16 instruction cycles after activation A/D conversion.

For this reason, if the output impedance of the external circuit for the analog input is high, analog input voltage might not stabilize within the analog input sampling period. Therefore, it is recommended to keep the output impedance of the external circuit low.

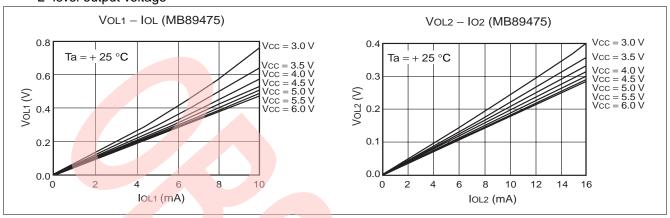

Note that if the impedance cannot be kept low, it is recommended to connect an external capacitor of about 0.1 µF for the analog input pin.

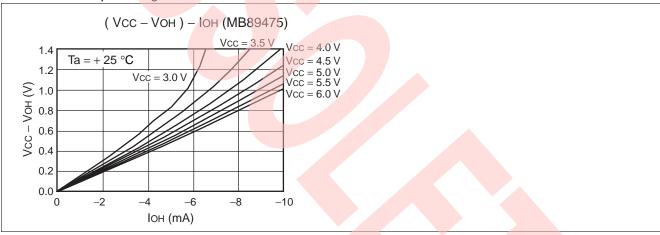

Sample & hold circuit	MB89475 MB89PV470	MB89P475
R : analog input equivalent resistance	2.2 kΩ	2.6 kΩ
C : analog input equivalent capacitance	45 pF	28 pF

### **■ EXAMPLE CHARACTERISTICS**

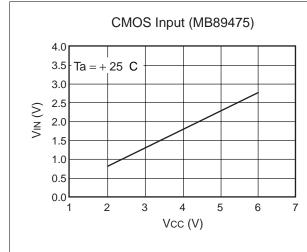

#### • "L" level output voltage

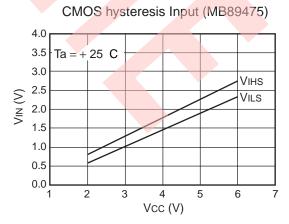

### • "H" level output voltage

### • "H" level input voltage/"L" level input voltage

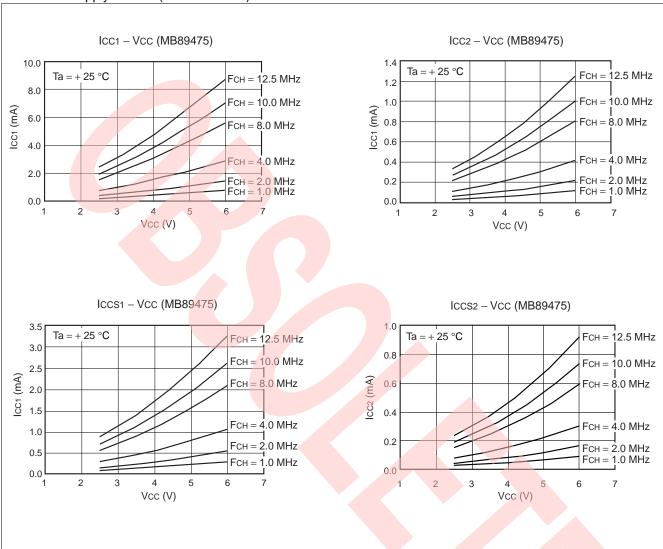

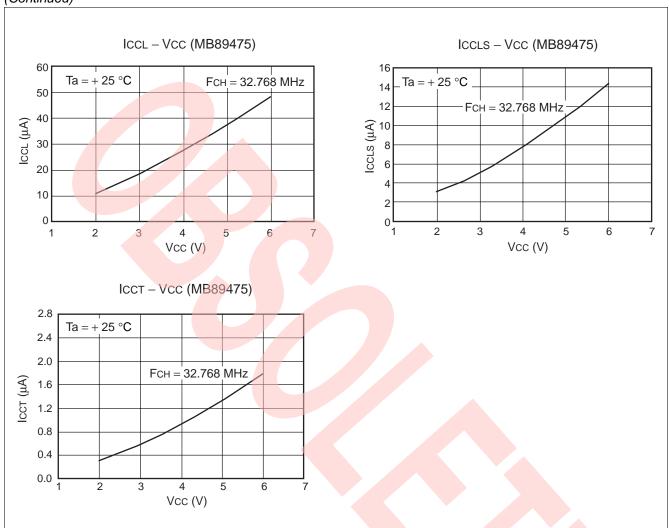

V<sub>IHS</sub>: Threshold when input voltage in hysteresis characteristics is set to "H" level.

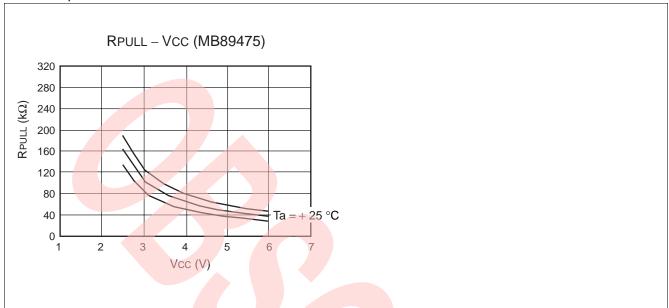

VILS: Threshold when input voltage in hysteresis characteristics is set to "L" level.

## • Pull-up resistance

## **■ MASK OPTIONS**

	Part number	MB89475	MB89P475	MB89PV470

#### All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
