

## FlexInput IC for automotive applications

TQFP48 (7x7 mm)

### Features

- AEC-Q100 qualified 
- 12 V and 24 V systems compatible (operating battery supply voltage 5.5 V-36 V)
- Programmable interface with 15 total inputs:
  - 12 for connection to external analog loads (with connection to VVAR, VDD5 and clamped battery VPRES, with resistance measurement)
    - 4 with also  $\lambda$  sensor functionality
    - 4 with also SENT functionality
  - 3 for connection to external digital switches (with connection to VPRES)
- Programmable pull-up/down current sources
- Integrated precise resistance measurements
- 12 bit ADC for voltage measurements
- 15 bit ADC for resistance measurements
- Variable reluctance sensor / Hall sensor Interface
- 1 analog output channel + 4 digital output channels
- SPI interface for device configuration and data communication
- Overtemperature protection
- Thermal resistance  $R_{th(j-c)} = 3 \text{ K/W}$

### Description

The L9966 is an automotive grade IC designed to be used as sensors interface. Up to 15 channels are available for analog sensing, resistance measurement and digital sensing (e.g. temperature, lambda, pressure, position sensors).

The L9966 allows replacing a number of discrete components and it gives the possibility to change the sensors across different applications without modifying the PCB hardware.

Target applications are Engine Control Units and Body/Chassis Modules.

48	UBSW	Battery supply	S

1. see **Pin-class legend**:

2. *R\_GND is the ground reference for ADC1, ADC2, VDD5REF voltage divider, input channel voltage dividers. In case R\_GND connection to ground on the PCB is lost, R\_GND is referenced one diode voltage drop above GND.*

**Pin-class legend:**

- I:** ECU Internal Pins: connection to other electrical components on the ECU (Local pins).
- S:** Supply Pins: connection to supply sources with protected battery supply (Local pins except UBSW that is a global pin).
- A:** Analog Inputs: connection to external ECU pins (Global pin).
- D:** Digital Inputs: connection to external ECU pins (Global pin).

### 3 Package information

In order to meet environmental requirements, ST offers these devices in different grades of **ECOPACK®** packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK® is an ST trademark.

**Notes:**

1. Dimensioning and tolerancing schemes conform to ASME Y14.5M-1994.
2. The top package body size may be smaller than the bottom package size up to 0.15 mm.
3. Datum A-B and D to be determined at datum plane H.
4. To be determined at seating datum plane C.
5. Dimensions D1 and E1 do not include mold flash or protrusions. Allowable mold flash or protrusions is "0.25 mm" per side. D1 and E1 are maximum plastic body size dimensions including mold mismatch.

6. Details of pin 1 identifier are optional but must be located within the zone indicated.
7. All dimensions are in millimeters.
8. No intrusion allowed inwards the leads.
9. Dimension "b" does not include dambar protrusion. Allowable dambar protrusion shall not cause the lead width to exceed the maximum "b" dimension by more than 0.08 mm. Dambar cannot be located on the lower radius or the foot. Minimum space between protrusion and an adjacent lead is 0.07 mm for 0.4 mm and 0.5 mm pitch packages.
10. Exact shape of each corner is optional.
11. These dimensions apply to the flat section of the lead between 0.10 mm and 0.25 mm from the lead tip.
12. A1 is defined as the distance from the seating plane to the lowest point on the package body.
13. Dimensions D2 and E2 show the maximum exposed metal area on the package surface where the exposed pad is located (if present). It includes all metal protrusions from exposed pad itself.
14. Dimensions D3 and E3 show the minimum solderable area, defined as the portion of exposed pad which is guaranteed to be free from resin flashes/bleeds, bordered by internal edge of inner groove.
15. The optional exposed pad is generally coincident with the top or bottom side of the package and not allowed to protrude beyond that surface.
16. "N" is the number of terminal positions for the specified body size.
