

ISL6536

Four Channel Supervisory IC

FN9114  
Rev 3.00  
Jan 25, 2011

The ISL6536 is a four channel supervisory IC designed to monitor voltages  $>, = 0.7V$ . This IC bias range is from 2.7V to 4V but can supervise any positive voltage using an external resistor divider to translate to a lower voltage for comparison to the internal 0.63V reference.

Once properly biased and enabled when all four voltage monitor (VMON) inputs are satisfied the PGOOD output will be immediately released to go high to signal that voltage is valid on all four rails. Subsequently when the monitored voltage on any rail drops below its user defined threshold point, the PGOOD output is pulled low. Each rail's VMON point is independently adjustable with a resistor divider. The PGOOD output is guaranteed to be valid with IC bias lower than 1V. The VMON inputs will ignore 30 $\mu$ s transients on the monitored supplies. The PGOOD output is an open-drain to allow ORing of multiple signals and interfacing to a range of logic levels. The ENABLE input provides for a reset of the PGOOD output when it is pulled down below 0.5V. With an internal 10uA pull-up to VDD it can be signalled with common logic or pulled to ground with a push button switch.

**Features**

- Adjustable undervoltage lockout for each supply
- Active high PGOOD Output
- Guaranteed PGOOD Valid to Falling VDD < 1V
- VMON Glitch Immunity
- Pb-Free (RoHS Compliant)

**Applications**

- Graphics Cards
- Multi voltage DSPs and Processors
- $\mu$ P Voltage Monitoring
- Embedded Control Systems
- Intelligent Instruments
- Medical Equipment
- Network Routers
- Portable Battery-Powered Equipment
- Set-Top Boxes
- Telecommunications Systems

**Typical Application Schematic**

**Ordering Information**

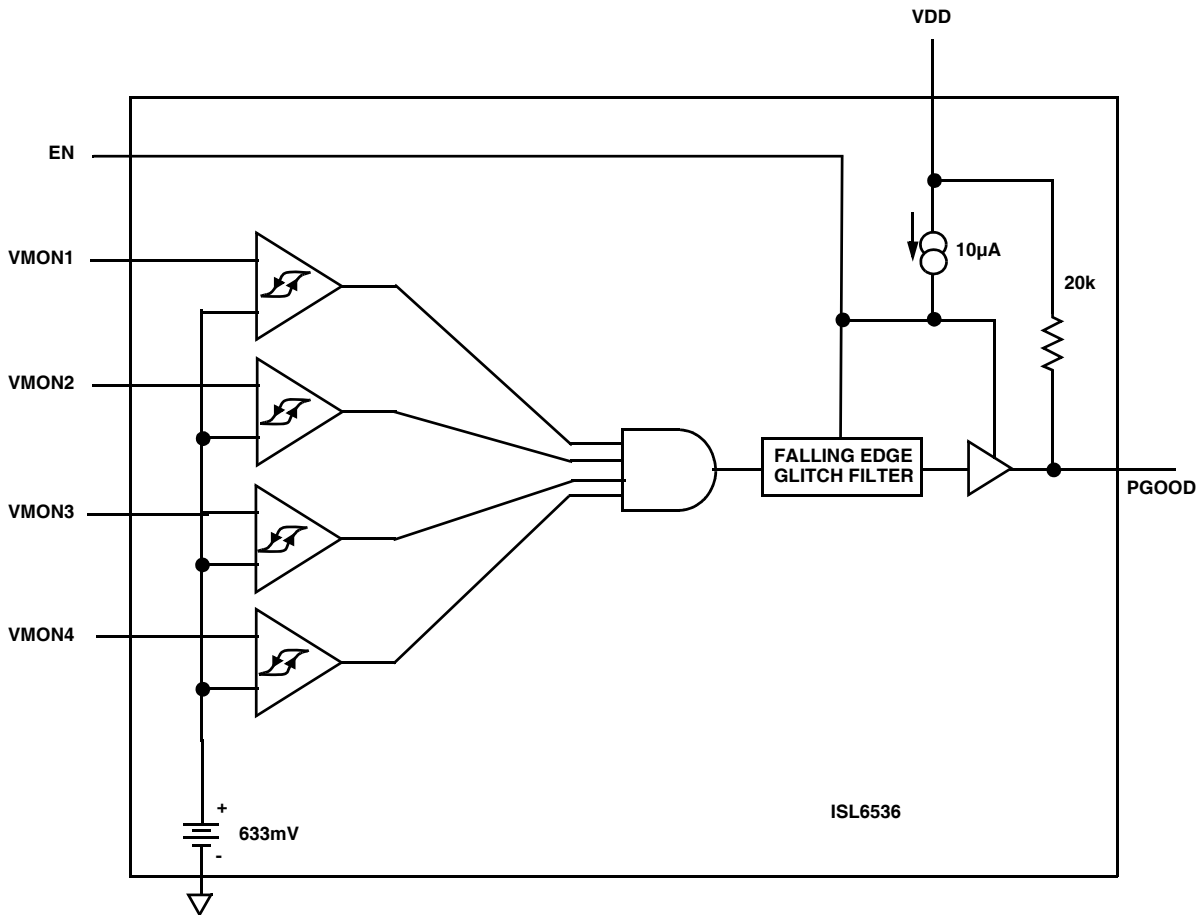

PART NUMBER (Note 2)	PART MARKING	TEMP. RANGE (°C)	PACKAGE (Pb-free)	PKG. DWG. #
ISL6536IBZ	6536 IBZ	-40 to +85	8 Ld SOIC	M8.15

NOTES:

1. Add "-T\*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

**Pin Descriptions**

ISL6536	PIN NAME	FUNCTION DESCRIPTION
1	VDD	Bias IC from nominal 2.7V to 4V
2	PGOOD	PGOOD is the boolean AND function of all the UV inputs being satisfied. This is an open drain output and can be pulled high to the appropriate level with an external resistor. Additionally a 20kΩ pull up to VDD is provided internally.
3	ENABLE	Enabling input for supervisory function. Has a 10μA pull-up to VDD
4	GND	IC ground
5-8	VMON1 VMON2 VMON3 VMON4	These inputs provide for a programmable monitored voltage threshold referenced to an internal 0.63V reference. These inputs have a 30μs glitch filter to prevent transient upsets from being recognized by PGOOD.

**Absolute Maximum Ratings**

VDD	+5.5V
VMON, PGOOD, ENABLE	-0.3V to VDD+0.3V
ESD Classification	4kV (HBM)

**Operating Conditions**

VDD Supply Voltage Range	+2.7V to +4V
Temperature Range (T <sub>A</sub> )	-40°C to 85°C

**Thermal Information**

Thermal Resistance (Typical, Note 1)	θ <sub>JA</sub> (°C/W)
8 Ld SOIC	108
Maximum Junction Temperature	150°C
Maximum Storage Temperature Range	-65°C to 150°C
Pb-Free Reflow Profile	see link below
<a href="http://www.intersil.com/pbfree/Pb-FreeReflow.asp">http://www.intersil.com/pbfree/Pb-FreeReflow.asp</a>	

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

**NOTES:**

1. θ<sub>JA</sub> is measured in free air with the component mounted on a high effective thermal conductivity test board. See Tech Brief TB379 for details.
2. All voltages are relative to GND, unless otherwise specified.

**Electrical Specifications** Nominal VDD = 3.3V, T<sub>A</sub> = T<sub>J</sub> = -40°C - 85°C, Unless Otherwise Specified.

PARAMETER	SYMBOL	TEST CONDITIONS	MIN (Note 3)	TYP	MAX (Note 3)	UNIT
<b>BIAS</b>						
IC Supply Current	I <sub>VDD</sub>	VMON > VMON_L2H		165	1000	μA
VDD Power On	VDD_L2H	VDD low to high		2.6		V

Delay from EN Falling	t <sub>PGdelENF</sub>	EN low to PG pulling low		0.015		μs
<b>ENABLE</b>						
Rising Threshold	V <sub>EN</sub>	ENABLE Low to High Threshold	0.4VDD	0.5VDD	0.6VDD	V
Threshold Hysteresis	V <sub>EN_HYS</sub>			0.065		V
Pull-up Current	I <sub>ENpu</sub>	V <sub>EN</sub> = 0.5V		10		μA
<b>VMON Input</b>						
Falling Threshold	3.3V <sub>MON_H2L</sub>	T <sub>J</sub> = +25°C	0.623	0.633	0.643	V
Falling Threshold Temp Coeff.	3.3V <sub>MON_TC</sub>			100		μV/°C
Hysteresis	V <sub>VMON_HYS</sub>		-	10	-	mV
Range	V <sub>MON_RNG</sub>		-	8	-	mV
Glitch Filter Duration	TFIL	VMON glitch to PGOOD low Filter	-	30	-	μs

**NOTE:**

3. Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design.

## ISL6536 Description and Operation

The ISL6536 is a four channel supervisory IC designed to monitor multiple voltages greater than 0.7V. This IC is suitable for both microprocessors or industrial system applications.

Upon VDD bias power up the PGOOD output is held low with VDD as low as 0V. Once biased to 2.6V and enabled the IC continuously monitors from one to four voltages independently through external resistor dividers comparing each VMON pin voltage to an internal 0.63V reference.

Once all VMON input voltages rise above 0.63V the PGOOD (power good) output signal is released and is pulled high via an external pull resistor to indicate that the power conditions

have been met. The PGOOD output is an open-drain to allow ORing of the signals and interfacing to a wide range of logic levels.

Once any VMON input falls below 0.63V the PGOOD output is pulled low, the VMON inputs are designed to reject fast transients (30µs).

If less than four voltages are being monitored, connect the unused VMON pins to VDD.

The PGOOD pin has an internal 20kΩ pull-up to VDD making an external pull-up resistor unnecessary.

Figure 1 illustrates the operational timing diagram.

# Package Outline Drawing

## M8.15

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 2, 11/10

### NOTES:

1. Dimensioning and tolerancing per ANSI Y14.5M-1982.
2. Package length does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
3. Package width does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
4. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
5. Terminal numbers are shown for reference only.
6. The lead width as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
7. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
8. This outline conforms to JEDEC publication MS-012-AA ISSUE C.
