

# dsPIC30F Noise Suppression Library

## Summary

The dsPIC30F Noise Suppression (NS) Library provides a function to suppress the effect of noise interfering with a speech signal. This function is useful for microphone-based applications, which have a potential for incoming speech getting corrupted by ambient noise captured by the microphone. It is especially suitable for systems in which an acoustically isolated noise reference is not available, such as:

- Hands-free Cell Phone Kits
- Speakerphones
- Intercoms
- Teleconferencing Systems
- Headsets
- As a front-end to a Speech Recognition system
- Any microphone-based application that needs to eliminate undesired noise

## Description

The Noise Suppression Library is written entirely in assembly language and is highly optimized to make extensive use of the dsPIC30F DSP instruction set and advanced addressing modes. The algorithm avoids data overflow. The Noise Suppression Library provides a “NoiseSuppressionInit” function for initializing the various data structures required by the algorithm and a “NoiseSuppression” function to remove noise from a 10 ms block of sampled 16-bit speech data. The user can easily call both functions through a well-documented Application Programmer’s Interface (API).

The “NoiseSuppression” function is primarily a Frequency Domain algorithm. A Fast Fourier Transform (FFT) is performed on each 10 ms block of data to analyze the frequency components of the signal. Thereafter, a Voice Activity Detection (VAD) algorithm is used to determine if the signal segment is speech or noise. The NS algorithm maintains a profile of the noise and updates it every time a noise segment is detected by the VAD. Every frequency band of the input signal is then scaled according to the proportion of noise contained in that frequency band, thereby causing a significant degree of noise suppression in the resultant signal. The algorithm, thus, adapts to changes in the nature and level of noise, and does not require a separate noise reference input.

The dsPIC30F Noise Suppression Library uses an 8 kHz sampling rate. However, the library includes a sample rate conversion function that ensures interoperability with libraries designed for higher sampling rates (9.6 kHz, 11.025 kHz or 12 kHz). The conversion function allows incoming signals at higher sampling rates to be converted to a representative 8 kHz sample. Similarly, the conversion function allows the output signal to be converted upward from 8 kHz to match the user application.

## Features

Key feature of the Noise Suppression Library include:

- All functions can be called from either a C or assembly application program
- Five user functions:
  - NoiseSuppressionInit
  - NoiseSuppression
  - InitRateConverter
  - SRC\_upConvert
  - SRC\_downConvert
- Full compliance with the Microchip dsPIC30F C30 C Compiler, Assembler and Linker
- Simple user interface – just one library file and one header file
- Highly optimized assembly code, utilizing DSP instructions and advanced addressing modes
- Audio Bandwidth: 0-4 kHz at 8 kHz sampling rate
- 10-20 dB noise reduction, depending on type of noise
  - Several speech recordings corrupted by Babble, Car Cabin, White and Narrowband Noise included for library evaluation
- “dsPIC30F Noise Suppression Library User’s Guide” is provided to help the user understand and use the library
- Demo application source code is provided with the library
- Accessory Kit available for purchase includes: an audio cable, headset, oscillators, microphone, speaker, DB9 M/F RS-232 cable, DB9M-DB9M Null Modem Adapter and can be used for library evaluation

## Resource Requirements

### Noise Suppression

Computational Requirements: 3.3 MIPS  
Program Flash Memory: 7 KB  
RAM: 1 KB

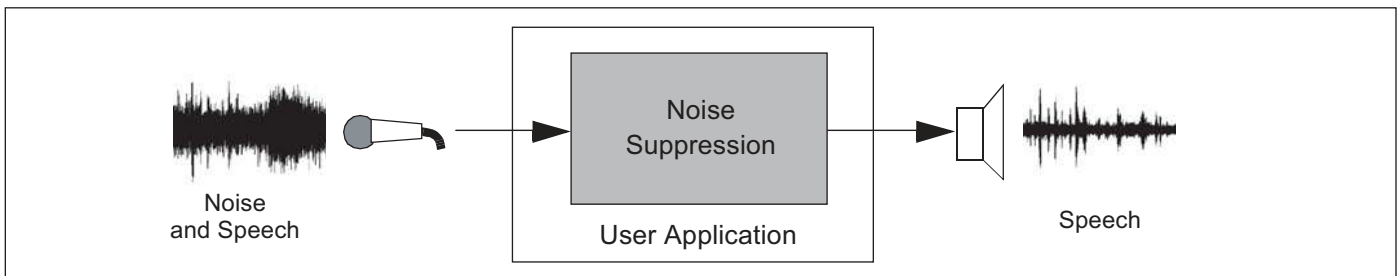

### Sample Rate Conversion

Computational Requirements: 1 MIPS  
Program Flash Memory: 2.6 KB  
RAM: 0.5 KB

**Note:** The user application might require an additional 1 KB-1.5 KB of RAM for data buffering (application-dependent).

## Devices Supported

dsPIC30F6014  
dsPIC30F6012  
dsPIC30F5013  
dsPIC30F5011  
dsPIC30F4013

**MICROCHIP**  
Development Systems

Microchip Technology Incorporated

## Host System Requirements (For programming and debugging using MPLAB® IDE)

- PC-compatible system with an Intel Pentium® class or higher processor, or equivalent
- A minimum of 16 MB RAM
- A minimum of 40 MB available hard drive space
- Microsoft® Windows® 98, Windows 2000 or Windows XP

## Part Numbers and Ordering Information:

dsPIC30F Noise Suppression Library		
Part Number	Description	Availability
SW300040-EVAL	dsPIC30F Noise Suppression Library Software License (Evaluation Only)	Now
SW300040-5K	dsPIC30F Noise Suppression Library Software License (Up to 5K units)	Now
SW300040-25K	dsPIC30F Noise Suppression Library Software License (5K+ to 25K units)	Now
SW300040-100K	dsPIC30F Noise Suppression Library Software License (25K+ to 100K units)	Now
AC300030	Accessory Kit (includes: audio cable, headset, oscillators, microphone, speaker, DB9 M/F RS-232 cable, DB9M-DB9M Null Modem Adapter)	Now

**Note:** Quantities are per project, payable as a one-time license fee based on estimated lifetime volume for products resulting from the project. Please consult the factory for quantities above 100K.
