

EV5030D-QH-00A

USB Charging Port Controller with Current Limit Switch, Supporting CDP, DCP Modes

DESCRIPTION

The EV5030D-QH-00A is an evaluation board for MP5030D, which integrates an USB current limit switch and charging port identification circuit. It achieves 3A continuous output current over a wide input supply range.

With MP5030D, it supports Dedicated Charging Port (DCP) and Charging Downstream Port (CDP) schemes for Battery Charging specification (BC1.2), the divider Mode, 1.2V/1.2V Mode without the need for external user interaction.

MP5030D provides linear line drop compensation, load current detection and status indication.

Fault condition protection includes hiccup current limiting, input OVP and thermal shutdown.

MP5030D requires a minimum number of readily standard external components to complete USB switch and charging mode auto detection solution. MP5030D is available in QFN-10(1.5mmx2mm) package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
System Input Voltage	V_{IN}	12	V
Default Output Voltage	V_{OUT}	5	V
Output Current	I_{OUT}	3	A

FEATURES

- Load Current Detection and Status Indication
- Up to 14V Operating Input Voltage Range
- Support DCP schemes for BC 1.2, Divider Mode and 1.2V/1.2V Mode
- Support CDP Mode for USB 2.0 Data
- Line Drop Compensation
- Programmable High Accuracy Current Limit
- 32mΩ Low- $R_{DS(ON)}$ Power MOSFET
- Input over Voltage Shutdown Protection
- Thermal Shutdown

APPLICATIONS

- USB Charging Downstream Port (CDP)
- USB Dedicated Charging Ports (DCP)

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

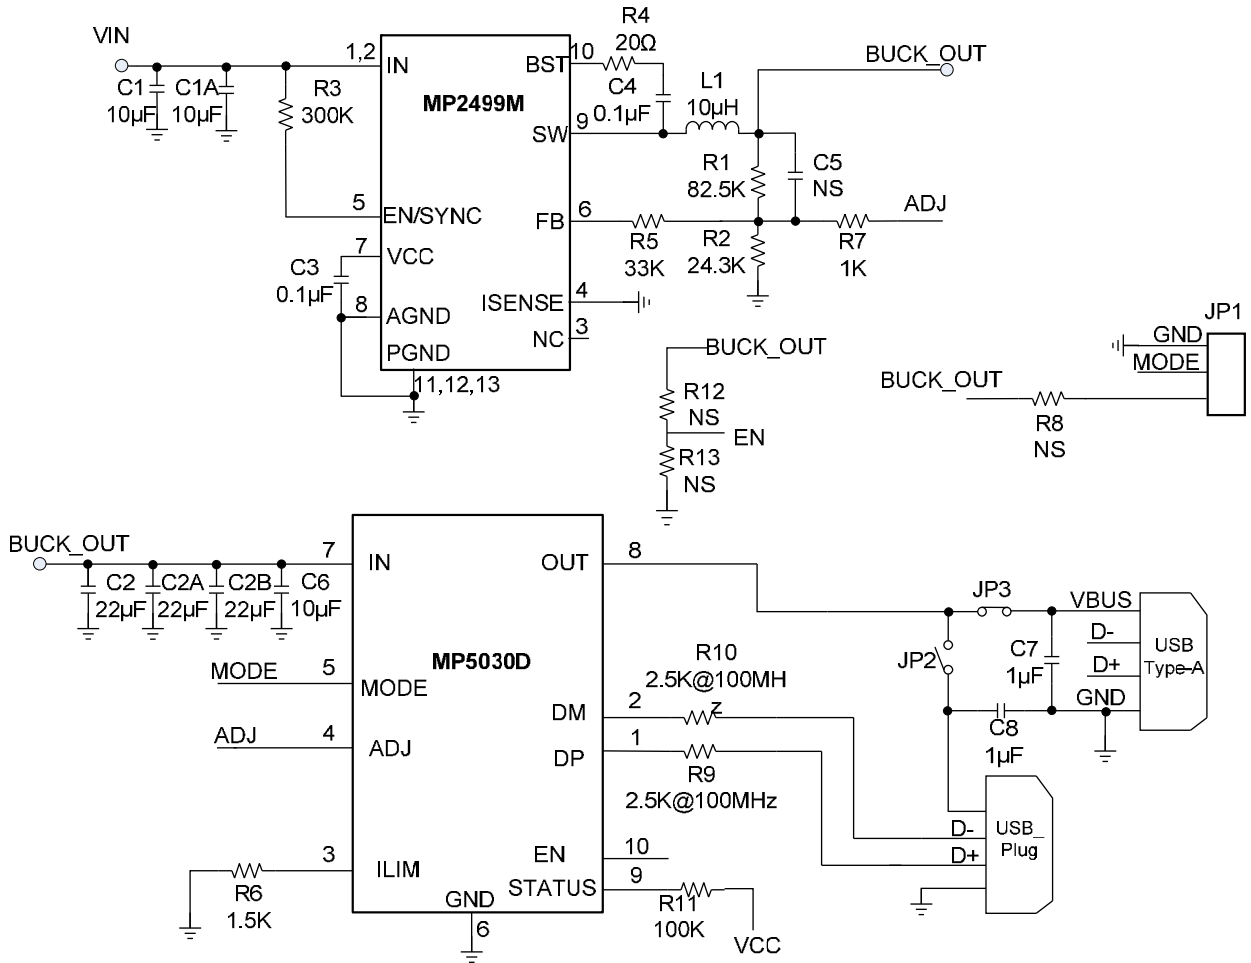

EV5030D-QH-00AEVALUATION BOARD

(L×W)4.38cm× 2.89cm

Board Number	MPS IC Number
EV5030D-QH-00A	MP5030DGQH

EVALUATION BOARD SCHEMATIC

NOTE: In the default settings, MODE pin short to GND for CDP mode.

EV5030D-QH-00A BILL OF MATERIALS

Qty	Ref	Value	Description	Package	Manufacturer	Part Number

Eye Pattern Test

Recommended CDP Mode Setup

QUICK START GUIDE

1. Preset Power Supply to 12V.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
4. EN pin for MP5030D: pull high or float enables the IC; pull low to disable the IC. EN is float in the demo board. STATUS pin for MP5030D is open drain output.
5. For default CDP mode, JP2 should open, MODE pin short to GND by JP1, USB_plug connect to USB host. Turn power supply on after making connections, the board will automatically start up. Connect different mobile phones to Type-A USB port for CDP mode test.
6. For DCP mode, JP2 should open, MODE pin should be float, R9 and R10 should be replaced by 0Ω resistor. Do not use USB_Plug port.
