Features

- High Performance, Low Power AVR® 8-Bit Microcontroller
- Advanced RISC Architecture
 - 120 Powerful Instructions Most Single Clock Cycle Execution
 - 32 x 8 General Purpose Working Registers
 - Fully Static Operation
 - Up to 20 MIPS Throughput at 20 MHz
- Data and Non-volatile Program and Data Memories
 - 2/4K Bytes of In-System Self Programmable Flash
 - Endurance 10,000 Write/Erase Cycles
 - 128/256 Bytes In-System Programmable EEPROM
 - Endurance: 100,000 Write/Erase Cycles
 - 128/256 Bytes Internal SRAM
 - Programming Lock for Flash Program and EEPROM Data Security
- Peripheral Features
 - One 8-bit Timer/Counter with Separate Prescaler and Compare Mode
 - One 16-bit Timer/Counter with Separate Prescaler, Compare and Capture Modes
 - Four PWM Channels
 - On-chip Analog Comparator
 - Programmable Watchdog Timer with On-chip Oscillator
 - USI Universal Serial Interface
 - Full Duplex USART
- Special Microcontroller Features
 - debugWIRE On-chip Debugging
 - In-System Programmable via SPI Port
 - External and Internal Interrupt Sources
 - Low-power Idle, Power-down, and Standby Modes
 - Enhanced Power-on Reset Circuit
 - Programmable Brown-out Detection Circuit
 - Internal Calibrated Oscillator
- I/O and Packages
 - 18 Programmable I/O Lines
 - 20-pin PDIP, 20-pin SOIC, 20-pad MLF/VQFN
- Operating Voltage
 - 1.8 5.5V
- Speed Grades
 - 0 4 MHz @ 1.8 5.5V
 - 0 10 MHz @ 2.7 5.5V
 - 0 20 MHz @ 4.5 5.5V
- Industrial Temperature Range: -40°C to +85°C
- Low Power Consumption
 - Active Mode
 - 190 μA at 1.8V and 1MHz
 - Idle Mode
 - 24 µA at 1.8V and 1MHz
 - Power-down Mode
 - 0.1 µA at 1.8V and +25°C

8-bit AVR®

ATtiny2313A ATtiny4313

Summary

Rev. 8246BS-AVR-09/11

1. Pin Configurations

Figure 1-1. Pinout ATtiny2313A/4313

PDIP/SOIC

MLF/VQFN

NOTE: Bottom pad should be soldered to ground.

1.1 Pin Descriptions

1.1.1 VCC

Digital supply voltage.

1.1.2 GND

Ground.

1.1.3 Port A (PA2..PA0)

Port A is a 3-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port A output buffers have symmetrical drive characteristics with both high sink and source capability, except PA2 which has the RESET capability. To use pin PA2 as I/O pin, instead of RESET pin, program ("0") RSTDISBL fuse. As inputs, Port A pins that are externally pulled low will source current if the pull-up resistors are activated. The Port A pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port A also serves the functions of various special features of the ATtiny2313A/4313 as listed on page 61.

1.1.4 Port B (PB7..PB0)

Port B is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port B also serves the functions of various special features of the ATtiny2313A/4313 as listed on page 62.

1.1.5 Port D (PD6..PD0)

Port D is a 7-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port D output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port D pins that are externally pulled low will source current if the pull-up resistors are activated. The Port D pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port D also serves the functions of various special features of the ATtiny2313A/4313 as listed on page 66.

1.1.6 **RESET**

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running and provided that the reset pin has not been disabled. The minimum pulse length is given in Table 22-3 on page 201. Shorter pulses are not guaranteed to generate a reset. The Reset Input is an alternate function for PA2 and dW.

The reset pin can also be used as a (weak) I/O pin.

1.1.7 XTAL1

Input to the inverting Oscillator amplifier and input to the internal clock operating circuit. XTAL1 is an alternate function for PA0.

1.1.8 XTAL2

Output from the inverting Oscillator amplifier. XTAL2 is an alternate function for PA1.

2. Overview

The ATtiny2313A/4313 is a low-power CMOS 8-bit microcontroller based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATtiny2313A/4313 achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

2.1 Block Diagram

Figure 2-1. Block Diagram

The AVR core combines a rich instruction set with 32 general purpose working registers. All the 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The ATtiny2313A/4313 provides the following features: 2/4K bytes of In-System Programmable Flash, 128/256 bytes EEPROM, 128/256 bytes SRAM, 18 general purpose I/O lines, 32 general purpose working registers, a single-wire Interface for On-chip Debugging, two flexible Timer/Counters with compare modes, internal and external interrupts, a serial programmable USART, Universal Serial Interface with Start Condition Detector, a programmable Watchdog Timer with internal Oscillator, and three software selectable power saving modes. The Idle mode stops the CPU while allowing the SRAM, Timer/Counters, and interrupt system to continue functioning. The Power-down mode saves the register contents but freezes the Oscillator, disabling all other chip functions until the next interrupt or hardware reset. In Standby mode, the crystal/resonator Oscillator is running while the rest of the device is sleeping. This allows very fast start-up combined with low-power consumption.

The device is manufactured using Atmel's high density non-volatile memory technology. The On-chip ISP Flash allows the program memory to be reprogrammed In-System through an SPI serial interface, or by a conventional non-volatile memory programmer. By combining an 8-bit RISC CPU with In-System Self-Programmable Flash on a monolithic chip, the Atmel ATtiny2313A/4313 is a powerful microcontroller that provides a highly flexible and cost effective solution to many embedded control applications.

The ATtiny2313A/4313 AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators, In-Circuit Emulators, and Evaluation kits.

2.2 Comparison Between ATtiny2313A and ATtiny4313

The ATtiny2313A and ATtiny4313 differ only in memory sizes. Table 2-1 summarizes the different memory sizes for the two devices.

Table 2-1. Memory Size Summary

Device	Flash	EEPROM	RAM
ATtiny2313A	2K Bytes	128 Bytes	128 Bytes
ATtiny4313	4K Bytes	256 Bytes	256 Bytes

3. About

3.1 Resources

A comprehensive set of drivers, application notes, data sheets and descriptions on development tools are available for download at http://www.atmel.com/avr.

3.2 Code Examples

This documentation contains simple code examples that briefly show how to use various parts of the device. These code examples assume that the part specific header file is included before compilation. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent. Please confirm with the C compiler documentation for more details.

For I/O Registers located in the extended I/O map, "IN", "OUT", "SBIS", "SBIC", "CBI", and "SBI" instructions must be replaced with instructions that allow access to extended I/O. Typically, this means "LDS" and "STS" combined with "SBRS", "SBRC", "SBR", and "CBR". Note that not all AVR devices include an extended I/O map.

3.3 Data Retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1 PPM over 20 years at 85°C or 100 years at 25°C.

4. Register Summary

Address	Name	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0	Page

ATtiny2313A/4313

Notes:

- 1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
- 2. I/O Registers within the address range 0x00 0x1F are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
- 3. Some of the status flags are cleared by writing a logical one to them. Note that, unlike most other AVRs, the CBI and SBI instructions will only operate on the specified bit, and can therefore be used on registers containing such status flags. The CBI and SBI instructions work with registers 0x00 to 0x1F only.
- 4. When using the I/O specific commands IN and OUT, the I/O addresses 0x00 0x3F must be used. When addressing I/O Registers as data space using LD and ST instructions, 0x20 must be added to these addresses.

8. Errata

The revision letters in this section refer to the revision of the corresponding ATtiny2313A/4313 device.

8.1 ATtiny2313A

8.1.1 Rev. D

No known errata.

8.1.2 Rev. A – C

These device revisions were referred to as ATtiny2313/ATtiny2313V.

8.2 ATtiny4313

8.2.1 Rev. A

No known errata.

9. Datasheet Revision History

9.1 Rev. 8246B - 10/11

- 1. Updated device status from Preliminary to Final.
- 2. Updated document template.
- 3. Added order codes for tape&reel devices, on page 259 and page 260
- 4. Updated figures:
 - Figure 23-33 on page 223
 - Figure 23-44 on page 228
 - Figure 23-81 on page 247
 - Figure 23-92 on page 252
- 5. Updated sections:
 - Section 5. "Memories" on page 15
 - Section 19. "Self-Programming" on page 172
 - Section 20. "Lock Bits, Fuse Bits and Device Signature" on page 177
 - Section 21. "External Programming" on page 183
 - Section 26. "Ordering Information" on page 259

9.2 Rev. 8246A - 11/09

- 1. Initial revision. Created from document 2543 t2313.
- 2. Updated datasheet template.
- 3. Added VQFN in the Pinout Figure 1-1 on page 2.
- 4. Added Section 7.2 "Software BOD Disable" on page 34.
- Added Section 7.3 "Power Reduction Register" on page 34.
- 6. Updated Table 7-2, "Sleep Mode Select," on page 36.
- 7. Added Section 7.5.3 "BODCR Brown-Out Detector Control Register" on page 37.
- 8. Added reset disable function in Figure 8-1 on page 38.
- 9. Added pin change interrupts PCINT1 and PCINT2 in Table 9-1 on page 47.
- 10. Added PCINT17..8 and PCMSK2..1 in Section 9.2 "External Interrupts" on page 48.
- 11. Added Section 9.3.4 "PCMSK2 Pin Change Mask Register 2" on page 52.
- 12. Added Section 9.3.5 "PCMSK1 Pin Change Mask Register 1" on page 52.
- 13. Updated Section 10.2.1 "Alternate Functions of Port A" on page 61.
- 14. Updated Section 10.2.2 "Alternate Functions of Port B" on page 62.
- 15. Updated Section 10.2.3 "Alternate Functions of Port D" on page 66.
- Added UMSEL1 and UMSEL0 in Section 14.10.4 "UCSRC USART Control and Status Register C" on page 139.
- 17. Added Section 15. "USART in SPI Mode" on page 145.
- 18. Added USI Buffer Register (USIBR) in Section 16.2 "Overview" on page 155 and in Figure 16-1 on page 155.
- 19. Added Section 16.5.4 "USIBR USI Buffer Register" on page 166.
- 20. Updated Section 19.6.3 "Reading Device Signature Imprint Table from Firmware" on page 175.

- 21. Updated Section 19.7.1 "SPMCSR Store Program Memory Control and Status Register" on page 175.
- 22. Added Section 20.3 "Device Signature Imprint Table" on page 179.
- 23. Updated Section 20.3.1 "Calibration Byte" on page 180.
- 24. Changed BS to BS1 in Section 20.6.13 "Reading the Signature Bytes" on page 189.
- 25. Updated Section 22.2 "DC Characteristics" on page 198.
- 26. Added Section 23.1 "Effect of Power Reduction" on page 206.
- 27. Updated characteristic plots in Section 23. "Typical Characteristics" for ATtiny2313A (pages 207 230), and added plots for ATtiny4313 (pages 231 254).
- 28. Updated Section 24. "Register Summary" on page 255.
- 29. Updated Section 26. "Ordering Information" on page 259, added the package type 20M2 and the ordering code -MMH (VQFN), and added the topside marking note.
