

Single and dual isolated 5 V low drop linear voltage regulators for automotive application

SO-8

Features

Symbol	Parameter	Values
V_S	Max DC supply voltage	40 V
ΔV_O	Max output voltage tolerance	$\pm 2\%$
V_{dp}	Max dropout voltage	500 mV
I_O	Output current	50 mA ⁽¹⁾ 2x50 mA ⁽²⁾
I_{qn}	Quiescent current	50 μ A ⁽³⁾

1. For L5050S - single output. Up to 100 mA as pulsed current
2. For L5050SD - dual output. Up to 2x100 mA as pulsed current.
3. Typical value valid for each single output with $E_n = LOW$.

- AEC-Q100 qualified 
- Operating DC supply voltage range 5.6 V to 40 V
- Low dropout voltage
- Low quiescent current consumption
- Up to 100 mA and 2x100 mA as pulsed current
- Precision output voltage 5 V $\pm 2\%$
- Dual electrically isolated voltage regulators (only for L5050SD)
- Enable input for enabling/disabling the voltage regulator
- Thermal shutdown and short circuit protection
- Wide temperature range ($T_J = -40\text{ }^\circ\text{C}$ to $150\text{ }^\circ\text{C}$)

Description

L5050 is a 5 V low dropout linear voltage regulator suitable for automotive applications, available in single (L5050S) or dual isolated (L5050SD) linear output voltage in a SO-8 package. The LDO delivers up to 50 mA (2x50 mA for the dual version) of DC load current and consumes as low as 5 μ A (per each output in L5050SD) of quiescent current with device disabled. High output voltage accuracy ($\pm 2\%$) is kept over wide temperature range, line and load variation. The L5050S is able to deliver up to 100 mA (as pulsed current) and L5050SD up to 2x100 mA (as pulsed current); duration of current is linked to thermal settings (such as PCB type, ambient temperature). Enable features (two enables for the dual version) allow enabling or disabling each output. The maximum input voltage is 40 V. The regulator output current is internally limited and the device is protected against short circuit, overload and over temperature conditions. In addition, only low value ceramic capacitor on output is required for stability.

2 Electrical specifications

2.1 Absolute maximum ratings

Stressing the device above the rating listed in the [Table 3](#): absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE program and other relevant quality documents.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_s	DC supply voltage	-0.3 to 40	V
I_s	Input current	internally limited	-
V_o	DC output voltage	-0.3 to 6	V
I_o	DC output current	internally limited	-
V_{En}	Enable input	-0.3 to 40	-
T_J	Junction operating temperature	-40 to 150	°C
$V_{ESD\ HBM}$	ESD HBM voltage level (HBM-MIL STD 883C)	±2	kV
$V_{ESD\ CDM}$	ESD CDM voltage level (CDM)	±750 ⁽¹⁾	V

1. ±500 V for En1 and En2 (only for L5050SD).

Table 4. Thermal data

Item	Symbol	Parameter	Value ⁽¹⁾		Unit
			L5050S	L5050SD	
A.022	R_{thJL}	Thermal resistance, junction-to-lead	60.6	60.6	°C/W
A.001	R_{thJA}	Thermal resistance, junction-to-ambient	96	94	°C/W

1. PCB: single layer; FR4 area = 77 mm x 86 mm; PCB thickness = 1.6 mm; Cu thickness = 70 μm (front side), Cu area = 2 cm².

2.2 Electrical characteristics

Values specified in this section are for $V_S = 5.6 \text{ V to } 31 \text{ V}$, $T_J = -40 \text{ }^\circ\text{C to } +150 \text{ }^\circ\text{C}$, unless otherwise stated.

Table 5. General

Item	Pin	Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
A.002	V_o	V_o	Output voltage	$V_S = 5.6 \text{ to } 31 \text{ V}$; $I_o = 5 \text{ to } 50 \text{ mA}$	4.9	5	5.1	V

A.008	V_S, V_o	SVR	Ripple rejection	$f_r = 100 \text{ Hz}$ ⁽⁴⁾	-	60	-	dB
A.009	V_o	$I_{\text{oth_H}}$	Normal consumption mode output current	-	4	-	-	mA
A.010	V_o	$I_{\text{oth_L}}$	Very low consumption mode output current	-	-	-	0.1	mA
A.011	V_S, V_o	I_{qn}	Current consumption with regulator disabled $I_{\text{qn}} = I_{V_S} - I_o$	$V_S = 13.5 \text{ V}$; En = low	-	5	10	μA
A.012	V_S, V_o	$I_{\text{qn_1}}$	Current consumption with regulator enabled $I_{\text{qn_1}} = I_{V_S} - I_o$	$I_o = 0.1 \text{ mA to } 0.3 \text{ mA}$; En = high	-	50	70	μA
A.013	V_S, V_o	$I_{\text{qn_100}}$	Current consumption with regulator enabled ⁽¹⁾ $I_{\text{qn_100}} = I_{V_S} - I_o$	$I_o = I_{\text{oth_H}} \text{ to } 100 \text{ mA}$ ⁽²⁾ ; En = high	-	2	4.2	mA
A.014		T_w	Thermal protection temperature ⁽⁵⁾	-	150	-	190	$^\circ\text{C}$
A.015		T_{w_hy}	Thermal protection temperature hysteresis	-	-	10	-	$^\circ\text{C}$

1. Those parameters are achieved by characterization on a small sample size from typical devices under typical conditions.
2. Up to 100 mA as pulsed current.
3. Measured output current when the output voltage has dropped 200 mV from its nominal value obtained at $V_S = 10.5 \text{ V}$ and $I_o = 25 \text{ mA}$.
4. Guaranteed by design.
5. Thermal protection is guaranteed by design and characterization.

3 Protection features

3.1 Voltage regulator

Voltage regulator uses a p-channel MOS transistor as a regulating element. With that structure, a very low dropout voltage at current up to 100 mA pulsed current is obtained. The output voltage is regulated up to transient input supply voltage of 40 V. The high-precision of the output voltages ($\pm 2\%$) is obtained with a pre-trimmed reference voltage. The voltage regulator automatically adapts its own quiescent current to the output current level. In light load conditions, the quiescent current goes down to 50 μA only in low consumption mode (for each regulating element in L5050SD). This procedure features a certain hysteresis on the output current (see Figure 9. Current consumption vs output current (at light load condition)). Short-circuit protection to GND and a thermal shutdown are provided.

Figure 19. Application schematic - L5050S

Figure 20. Application schematic - L5050SD - common input voltage

Figure 21. Application schematic - L5050SD - double supply line for the input voltages

The input capacitor C1 is necessary as backup supply for short battery voltage interruption, which may occur on the line. Its value, should be chosen according to the relevant application requirement. The second input capacitor $C2 \geq 220 \text{ nF}$ is needed when the C1 is too distant from the VS pin and it compensates smooth line disturbances. The C0 ceramic capacitor, connected to the output pin, is for bypassing to GND the high-frequency noise and it guarantees stability even during sudden line and load variations. Suggested value is $C0 = 220 \text{ nF}$ with $\text{ESR} \geq 100 \text{ m}\Omega$. Stability region is reported in the figure below.

Figure 22. Stability region

Figure 23. Maximum load variation response

3.2 Enable

L5050 features enable input (two enable input pins for the L5050SD, one for each voltage regulator). A high voltage level at the enable input pin switches the regulator element ON. In standby mode, with the enable input pin low, the regulator output is disabled and the current consumption of the corresponding regulator (quiescent current) is typically $5 \mu\text{A}$.
