

74F534 Octal D-Type Flip-Flop with 3-STATE Outputs

General Description

The 'F534 is a high speed, low-power octal D-type flip-flop featuring separate D-type inputs for each flip-flop and 3-STATE outputs for bus-oriented applications. A buffered Clock (CP) and Output Enable (\overline{OE}) are common to all flip-flops. The 'F534 is the same as the 'F374 except that the outputs are inverted.

Features

- Edge-triggered D-type inputs
- Buffered positive edge-triggered clock
- 3-STATE outputs for bus-oriented applications
- Guaranteed 4000V minimum ESD protection

Functional Description

The 'F534 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-STATE complementary outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH clock (CP) transition. With the Output Enable (\overline{OE}) LOW, the contents of the eight flip-flops are available at the outputs. When the \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.

Function Table

CP	Inputs		Output
	OE	D	\overline{O}
↗	L	H	L
↗	L	L	H
L	L	X	\overline{O}_0
X	H	X	Z

H = HIGH Voltage Level
 L = LOW Voltage Level
 X = Immaterial
 ↗ = LOW-to-HIGH Clock Transition
 Z = High Impedance
 \overline{O}_0 = Value stored from previous clock cycle
