Product Description

This Huawei® 34060885 compatible SFP+ transceiver provides XGS-N2/C+ throughput up to 20km over single-mode fiber (SMF) using a wavelength of 1577nmTx/1270nmRx and 1490nmTx/1310nmRx via a SC connector. It is guaranteed to be 100% compatible with the equivalent Huawei® transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

ProLabs' transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. – made or designated country end products."

Transmitter Section

Tx_Disable

Tx_Disable is an input pin that is used to shut down the XGSPON transmitter optical output at the same time. It is pulled up within the module with a 4.7k Ω to 10k Ω resistor. Its states are: low (0 – 0.8V) - transmitter on; (>0.8, < 2.0V) - undefined; high (2.0 – VCC) - transmitter disabled; open - transmitter disabled. The Tx_Disable signal is “high” (LVTTTL “logic 1”) to turn off the laser output. The laser will turn on when Tx_Disable is “low” (LVTTTL “logic 0”).

XGSPON TD+/-

XGSPON_TD+/- are the differential XGSPON transmitter inputs. They are AC-coupled, differential lines with 100 Ω differential termination inside the module. It allows a differential input swing of 120-850mV, 9.953Gbps data rate.

Receiver Section

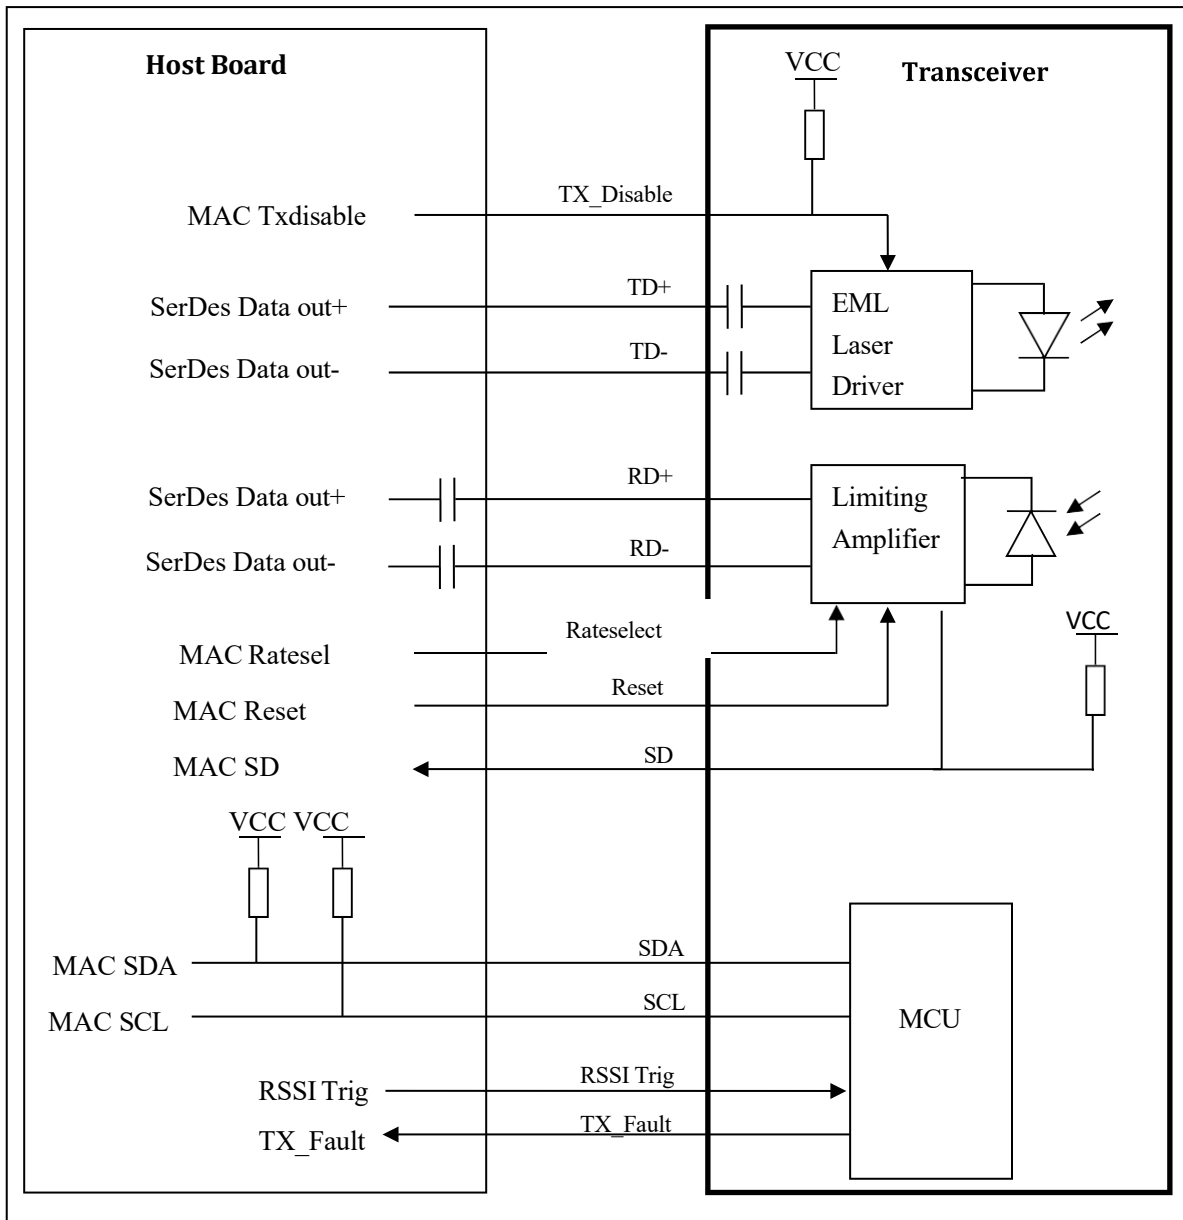

XGSPON_SD

SD (Signal Detect) is an open collector/drain output, which should be pulled up with a 4.7k Ω to 10k Ω resistor to a voltage between 2.4V and Vcc+0.3V. When “low,” this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). “High” indicates normal operation. In the “low” state, the output will be pulled to < 0.4V.

XGSPON RD+/-

These are the XGSPON differential receiver outputs. They are DC coupled 100 Ω differential lines which should be terminated with 100 Ω (differential) at the user SERDES. The AC coupling is done on the host board. The voltage swing on these lines will be between 400 and 800mV differential output when properly terminated.
