Description

ACR1504I3-EVB Evaluation boards are designed to provide a means to facilitate engineering evaluation of the chip antenna: ACR1504I3. With a typical operating frequencies of 915/868/433 MHz, the chip can be used for 915/868/433 MHz LPWA/ISM applications.

To evaluate the performance of antenna, calibrate the Vector Network analyzer (VNA) for the testing frequency band and connect the evaluation board to the calibrated port using the given SMA connector on the board.
