

- Compatible With IEEE 1194.1-1991 (BTL) and IEEE 896.2-1991 (Futurebus+) Standards
 - TTL A Port, Backplane Transceiver Logic B Port
 - Open-Collector B-Port Outputs Sink 100 mA
 - Minimum B-Port Edge Rate = 2 ns
 - Isolated Logic-Ground and Bus-Ground Pins Reduce Noise
 - BIAS V_{CC} Pin Minimizes Signal Distortion During Live Insertion/Withdrawal
 - Available in Plastic Quad Flatpack (RC) and Ceramic Flatpack (WD) Packages
 - B-Port Biasing Network Preconditions the Connector and PC Trace to the Backplane Transceiver Logic High-Level Voltage

description

The 'FB2040 is an 8-bit transceiver designed to translate signals between TTL and backplane transceiver logic (BTL) environments. It is specifically designed to be compatible with IEEE 1194.1-1991 (BTL) and IEEE 896.2-1991 (Futurebus+) standards.

The \bar{B} port operates at BTL-signal levels. The open-collector \bar{B} ports are specified to sink 100 mA and have minimum output edge rates of 2 ns. Two output enables, OEB and \overline{OEB} , are provided for the \bar{B} outputs. When OEB is high and \overline{OEB} is low, the \bar{B} port is active and reflects the inverse of the data present at the A-input pins. When OEB is low, \overline{OEB} is high, or V_{CC} is typically less than 2.5 V, the \bar{B} port is turned off.

SN54FB2040, SN74FB2040 8-BIT TTL/BTL TRANSCEIVERS

NOVEMBER 1991 – REVISED JULY 1993

description (continued)

The A port operates at TTL-signal levels and has split input and output pins. The A outputs reflect the inverse of the data at the \bar{B} port when the A-port output enable, OEA, is high. When OEA is low or when V_{CC} is typically less than 2.5 V, the A outputs are in the high-impedance state.

Pins are allocated for the four-wire IEEE 1149.1 (JTAG) test bus, which will be implemented in a future version of the 'FB2040. Currently TMS and TCK are not connected and TDI is shorted to TDO.

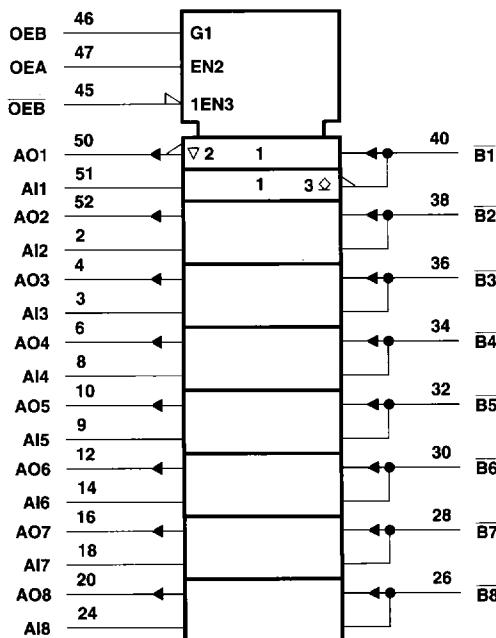

BIAS V_{CC} establishes a voltage between 1.62 V and 2.1 V on the BTL outputs when V_{CC} is not connected.

The SN54FB2040 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74FB2040 is characterized for operation from 0°C to 70°C .

FUNCTION TABLE

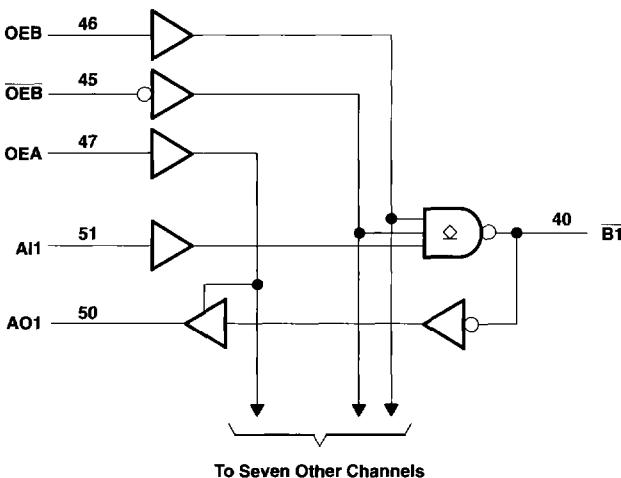

INPUTS			FUNCTION
OEB	OEB	OEA	
L	X	L	Isolation
X	H	L	
L	X	H	\bar{B} data to AO bus
X	H	H	
H	L	L	$\bar{A}I$ data to B bus
H	L	H	$\bar{A}I$ data to B bus, \bar{B} data to AO bus

logic symbol†

† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.
Pin numbers shown are for the RC package.

functional block diagram

Pin numbers shown are for the RC package.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V_{CC}	-0.5 V to 7 V
Input voltage range, V_I (except \bar{B} port)	-1.2 V to 7 V
V_I (\bar{B} port)	-1.2 V to 3.5 V
Input current range (except \bar{B} port)	-18 mA to 5 mA
Voltage range applied to any \bar{B} output in the disabled or power-off state	-0.5 V to 5.5 V
Voltage range applied to any output in the high state	-0.5 V to V_{CC}
Current applied to any single output in the low state: A port	96 mA
(\bar{B} port)	200 mA
Maximum power dissipation at $T_A = 55^\circ\text{C}$ (in still air): RC package	0.85 W
Storage temperature range	-65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

PARAMETER MEASUREMENT INFORMATION

PRODUCT PREVIEW

- NOTES:
- C_L includes probe and jig capacitance.
 - All input pulses are supplied by generators having the following characteristics: TTL Inputs - PRR \leq 10 MHz, $Z_O = 50 \Omega$, $t_f \leq 2.5$ ns, $t_r \leq 2.5$ ns. BTL Inputs - PRR \leq 10 MHz, $Z_O = 50 \Omega$, $t_f \leq 2.5$ ns, $t_r \leq 2.5$ ns.
 - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - The outputs are measured one at a time with one transition per measurement.
