

NB3RL02

Low Phase-Noise Two-Channel Clock Fanout Buffer

The NB3RL02 is a low-skew, low jitter 1:2 clock fan-out buffer, ideal for use in portable end-equipment, such as mobile phones. With integrated LDO and output control circuitry.

The MCLK_IN pin has an AC coupling capacitor and will directly accept a square or sine wave clock input, such as a temperature compensated crystal oscillator (TCXO). The minimum acceptable input amplitude of the sine wave is 300 mV peak-to-peak.

The two clock outputs are enabled by control inputs CLK_REQ1 and CLK_REQ2.

The NB3RL02 has an integrated Low-Drop-Out (LDO) voltage regulator which accepts input voltages from 2.3 V to 5.5 V and outputs 1.8 V at $I_{out} = 50$ mA. This 1.8 V supply is externally available to provide regulated power to peripheral devices, such as a TCXO.

The adaptive clock output buffers offer controlled slew-rate over a wide capacitive loading range which minimizes EMI emissions, maintains signal integrity, and minimizes ringing caused by signal reflections on the clock distribution lines.

The NB3RL02 is offered in a 0.4 mm pitch wafer-level-chip-scale (WLCS) package and is optimized for very low standby current consumption.

Features

- Low Additive Noise:
 - ◆ -149 dBc/Hz at 10 kHz Offset Phase Noise
 - ◆ 0.37 ps (rms) Output Jitter
- Limited Output Slew Rate for EMI Reduction (1 ns to 5 ns/Rise/Fall Time for 10–50 pF Loads)
- Regulated 1.8 V Output Supply Available for External Clock Source, ie. TCXO
- Operation to 80 MHz
- Ultra-Small Package:
 - ◆ 8-ball: 0.4 mm Pitch WLCS
- ESD Performance Exceeds JESD 22
 - ◆ 2000 V Human-Body Model (A114-A)
 - ◆ 200 V Machine Model (A115-A)
 - ◆ 1000 V Charged-Device Model (JESD22-C101-A Level III)
- These are Pb-Free Devices

Applications

- Cellular Phones
- Global Positioning Systems (GPS)

Table 1. PIN DESCRIPTION

Ball No.	Name	I/O	Description
A1	VBATT	I	Input to internal LDO
A2	CLK_OUT1	O	Clock output 1
B1	VLDO	O	1.8 V supply for NB3RL02 and external TCXO
B2	CLK_REQ1	I	Clock request from peripheral 1
C1	MCLK_IN	I	Master clock input
C2	CLK_REQ2	I	Clock request from peripheral 2
D1	GND	-	Ground
D2	CLK_OUT2	O	Clock output 2

Table 2. FUNCTION TABLE

Inputs			Outputs		
CLK_REQ1	CLK_REQ2	MCLK_IN	CLK_OUT1	CLK_OUT2	VLDO
L	L	X	L	L	0 V
L	H	CLK	L	CLK	1.8 V
H	L	CLK	CLK	L	1.8 V
H	H	CLK	CLK	CLK	1.8 V

NB3RL02

Table 3. ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Condition	Min	Max	Unit
V _{BATT}	V _{BATT} Voltage Range (Note 1)		-0.3	7	V
	Voltage range (Note 2)	CLK_REQ_1/2, MCLK_IN	-0.3	V _{BATT} + 0.3	V
		V _{LDO} , CLK_OUT_1/2 (Note 1)	-0.3	V _{BATT} + 0.3	
I _{IK}	Input clamp current at V _{BATT} , CLK_REQ_1/2, and MCLK_IN	V _I < 0		-50	mA
I _O	Continuous output current	CLK_OUT1/2		± 20	mA
	Continuous current through GND, V _{BATT} , V _{LDO}	Continuous current through GND, V _{BATT} , V _{LDO}		± 50	mA
	ESD Rating	Human-Body Model		2000	V
		Charged-Device Model		1000	
		Machine Model		200	
T _J	Operating virtual junction temperature		-40	150	°C
T _A	Operating ambient temperature range		-40	85	°C
T _{stg}	Storage temperature range		-55	150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. All voltage values are with respect to network ground terminal.

Table 4. RECOMMENDED OPERATING CONDITIONS (Note 3)

Symbol	Parameter		Min	Max	Unit
V _{BATT}	Input voltage	V _{BATT}	2.3	5.5	V
V _I	Input voltage Amplitude	MCLK_IN, CLK_REQ1/2	0	1.89	V
V _O	Output voltage	CLK_OUT1/2	0	1.8	V
V _{IH}	High-level input voltage	CLK_REQ1/2	1.3	1.89	V
V _{IL}	Low-level input voltage	CLK_REQ1/2	0	0.5	V
I _{OH}	High-level output current, DC current		-8		mA
I _{OL}	Low-level output current, DC current			8	mA

3. All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation.

NB3RL02

		$I_{OL} = 8 \text{ mA}$			0.55	

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm.

NB3RL02

APPLICATION INFORMATION

Typical Application

A typical mobile application for the NB3RL02 is shown in Figure 2. An external low noise TCXO clock source is powered by the NB3RL02's 1.8 V regulated LDO and is

buffered to drive a mobile GPS receiver and WLAN transceiver. Each peripheral can independently request an active clock by asserting a clock request line (CLK_REQ1 or CLK_REQ2).

Figure 2. Mobile Application

When both clock request lines are logic LOW, the NB3RL02 enters a current-saving shutdown mode. In this mode, the LDO output goes to 0 V and turns off the TCXO. Also, the unpowered CLK_OUT1 and CLK_OUT2 outputs are pulled to GND.

When the NB3RL02 receives a HIGH from either peripheral CLK_REQn, the 1.8 V LDO output is enabled and will power the TCXO. The output of the TCXO can be a square wave, sine wave, or clipped sine wave and is converted to a buffered square wave.

Input Clock to Output Square Wave Generator

Figure 3 shows the MCLK_IN input having an internal AC coupling capacitor. This allows either a square or sine wave signal to be directly connected from a TCXO. Therefore, an external series capacitor is not required.

Figure 3. Input Stage

The clock frequency band of the NB3RL02 is 9 MHz to 80 MHz with all performance metrics specified at 26 MHz and 52 MHz.

Typical input sinusoidal signal amplitude is 0.8 V_{PP} for specified performance, but amplitudes as low as 0.3 V_{PP} are acceptable, but with reduced phase noise and jitter performance.

CLK_OUT1 and CLK_OUT2 Outputs

The CLK_OUT1 and CLK_OUT2 outputs drive 1.8 V LVCMOS levels with rise/fall times within 1 ns to 5 ns with load capacitors between 10 pF and 50 pF. These relatively slow edge rates will minimize EMI radiation into the system. When not requested, each output is set to Low to avoid false clocking of the load device.

LDO

The integrated low noise 1.8 V LDO provides power internal to the NB3RL02 as well as a power source for an external clock such as a TCX0. The input range of the LDO allows the device to be powered directly from a single cell Li battery. The LDO is enabled when either of the CLK_REQn signals is High.

When disabled, the device turns off the LDO and enters a low power shutdown mode consuming less than 1 µA from the battery.

The LDO requires an output decoupling capacitor in the range of 1 µF to 10 µF for compensation and high frequency PSR. An input bypass capacitor of 1 µF or larger is recommended.
