

# AEAT-6010/6012 Magnetic Encoder

## 10 or 12 bit Angular Detection Device

## Data Sheet

### Description

Avago Technologies' AEAT-60xx series of magnetic encoders provides an integrated solution for angular detection. With ease of use in mind, these magnetic encoders are ideal for angular detection within 360°. Based on magnetic technologies, the device is non-contact and ensures reliable operations. It is able to provide absolute angle detection upon power-up, with a resolution of 0.0879°(12 bits version) or 0.35°(10bits version), which is equivalent to 4096 and 1024 positions per revolution respectively. The positional data is provided in serial bit stream. There is no upper speed limit; the only restriction is that there will be fewer samples per revolution as the speed increases.

### Features

- 10 or 12 bits resolution
- Contactless sensing technologies
- Wide temperature range from -40° to 125°C
- Absolute angular position detection
- Synchronous serial interface (SSI) output for absolute position data (binary format)
- Code monotony error =  $\pm 1$  LSB
- 5V supply
- Easy Assembly, No Signal Adjustment required
- RoHS compliant

### Exploded View

### Applications

- Flow meter
- Angular detection
- Knob control
- Rotary encoder

Note: "This product is not specifically designed or manufactured for use in any specific device. Customers are solely responsible for determining the suitability of this product for its intended application and solely liable for all loss, damage, expense or liability in connection with such use."

## Device Selection Guide [1]

| Part Number   | Resolution (bit) | Operating Temperature (°C) | Output Communication | DC Supply Voltage (V), V <sub>DD</sub> |
|---------------|------------------|----------------------------|----------------------|--|
| AEAT-6012-A06 | 12               | -40 to +125                | Serial               | +5.0                                   |
| AEAT-6010-A06 | 10               | -40 to +125                | Serial               | +5.0                                   |

Notes:

- For other options of Magnetic Encoder, please refer to factory.

**Table 1. Absolute Maximum Ratings [2, 3]**

| Parameter                                     | Symbol           | Limits                       | Units | Notes |
|---|------------------|------------------------------|-------|-------|
| DC Supply Voltage at pin V <sub>DD</sub> = 5V | V <sub>DD</sub>  | -0.3 to +7                   | V     |       |
| Input Voltage                                 | V <sub>i</sub>   | -0.3 to V <sub>DD</sub> +0.3 | V     |       |
| Storage Temperature                           | T <sub>STG</sub> | -40 to 125                   | °C    |       |

Notes:

- Stresses greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.
- Exposure to absolute maximum rating conditions for extended periods may affect reliability.

**Table 2. Recommended Operating Condition**

| Parameter                                     | Symbol           | Values      | Units | Notes  |
|---|------------------|-------------|-------|--------|
| DC Supply Voltage at pin V <sub>DD</sub> = 5V | V <sub>DD</sub>  | +4.5 / +5.5 | V     |        |
| Ambient Temperature                           | T <sub>amb</sub> | -40 to +125 | °C    |        |
| Maximum Read-out Frequency                    | f <sub>CLK</sub> | ≤1          | MHz   | >0 MHz |

**Table 3. DC Characteristics**

DC Characteristics over Recommended Operating Range, typical at 25 °C

| Parameter                   | Symbol          | Condition | Values               |      |                      | Units | Notes                      |
|-----------------------------|-----------------|-----------|----------------------|------|----------------------|-------|----------------------------|
|                             |                 |           | Min                  | Typ. | Max                  |       |                            |
| VDD Supply Current          | I <sub>DD</sub> |           |                      | 16   | 20                   | mA    |                            |
| Output High Voltage D0      | V <sub>OH</sub> |           | V <sub>DD</sub> -0.5 |      |                      | V     |                            |
| Output Low Voltage D0       | V <sub>OL</sub> |           |                      |      | V <sub>SS</sub> +0.4 | V     |                            |
| Output Current D0           | I <sub>O</sub>  |           |                      |      | 4                    | mA    | V <sub>DD</sub> pin = 4.5V |
| Input High Voltage CLK, CSn | V <sub>IH</sub> |           | 0.7*V <sub>DD</sub>  |      |                      |       | 4                          |
| Input Low Voltage CLK, CSn  | V <sub>IL</sub> |           |                      |      | 0.3*V <sub>DD</sub>  |       |                            |

Note:

- CSn is internal pull-up.

## Package Dimensions

Figure 1. Package and recommended mounting dimension

## Parameters

| No. | Parameter                           | Value   |
|-----|-------------------------------------|---|
| 1   | Operating Temp(°C)                  | - 40 to +125  |
| 2   | Shaft axial play (mm)               | ± 0.08  |
| 3   | Shaft TIR (mm)                      | 0.05  |
| 4   | Mechanical speed (rpm)              | 12,000  |
| 5   | Shaft diameter (mm)                 | 6 + 0 / -0.01   |
| 6   | Moment inertia (g-cm <sup>2</sup> ) | 0.104   |
| 7   | Shaft length – (mm)                 | 8.5 ± 1.0   |
| 8   | Mounting screw size (mm)            | M2 x 0.4 x 8<br>(socket head cap screw, head $\varnothing 3.8 \pm 0.18$ mm) |
| 9   | Recommended screw torque            | 0.6 lb.inch   |
| 10  | Encoder base plate thickness (mm)   | 2   |
| 11  | Bolt circle                         | ± 0.13  |

\* Note:- For high temperature application, it is highly recommended that adhesive be applied at least to the screw and the base plate interface. Refer Application Note for further details.

**Table 4. Timing Characteristics**

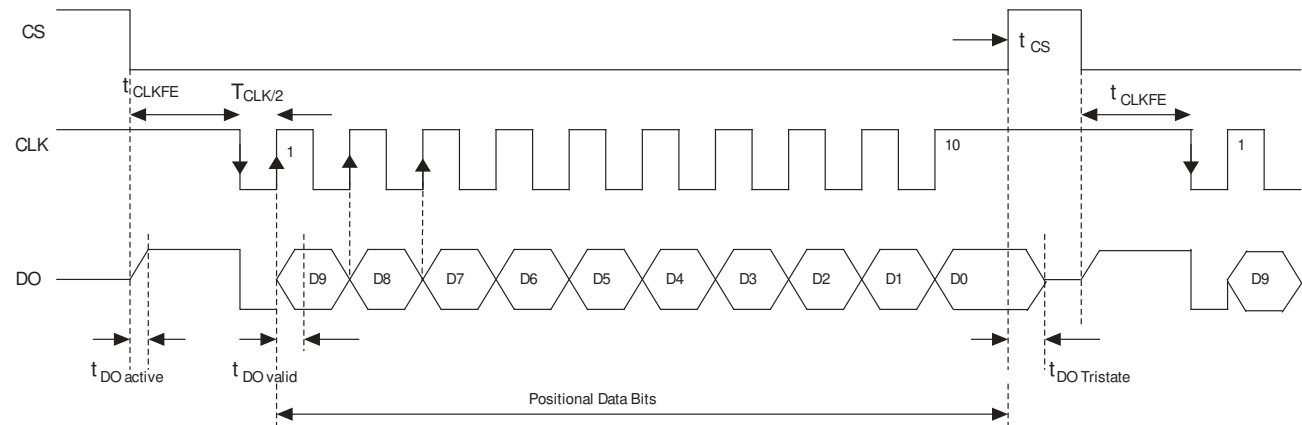

Timing Characteristics over Recommended Operating Range, typical at 25 °C

| Parameter                             | Symbol             | Condition | Values |       |       | Units | Notes |
|---------------------------------------|--------------------|-----------|--------|-------|-------|-------|-------|
|                                       |                    |           | Min    | Typ.  | Max   |       |       |
| Data output activated (logic high)    | $T_{DO\ active}$   |           |        |       | 100   | ns    | 1     |
| First data shifted to output register | $t_{CLK\ FE}$      |           | 500    |       |       | ns    | 2     |
| Start of data output                  | $T_{CLK/2}$        |           | 500    |       |       | ns    | 3     |
| Data output valid                     | $T_{DO\ valid}$    |           |        |       | 375   | ns    | 4     |
| Data output tristate                  | $T_{DO\ tristate}$ |           |        |       | 100   | ns    | 5     |
| Pulse width of CSn                    | $T_{CSn}$          |           | 500    |       |       | ns    | 6     |
| Sampling rate for absolute output     | $f_{abs}$          |           | 9.9    | 10.42 | 10.94 | kHz   | 7     |
| Power-up time                         | $t_{CF}$           |           |        |       |       |       | 8     |
| 10-bit version                        |                    |           | -      | -     | 50    | ms    |       |
| 12-bit version                        |                    |           | -      | -     | 20    | ms    |       |

Notes:

1. Time between falling edge of CSn and data output activated
2. Time between falling edge of CSn and first falling edge of CLK
3. Rising edge of CLK shifts out one bit a time
4. Time between rising edge of CLK and data output valid
5. After the last bit DO changes back to “tristate”
6. CSn=high; To initiate read-out of next angular position
7. Internal sampling rate.
8. Until internal compensation finished

**Timing Characteristics**

Notes:

1. Please refer to Table 4 for Timing Characteristics.
2. For 12 bits version; the Positional Data Bits will start with D11 instead and end at D0.

**Figure 2. Timing Diagram for 10 bit Magnetic Encoder**

**Table 5. Linearity**

| Parameter                  | Symbol | Min. | Typ.          | Max           | Units | Notes            |
|----------------------------|--------|------|---------------|---------------|-------|------------------|
| Integral Non-Linearity     | INL    | -    | $\pm 0.8$ [1] | $\pm 2.4$ [2] | Deg.  |                  |
| Differential Non-Linearity |        |      |               |               |       |                  |
| 10-bit version             | DNL    | -    | -             | $\pm 0.176$   | Deg.  | No missing codes |
| 12-bit version             |        | -    | -             | $\pm 0.044$   | Deg.  | No missing codes |

Notes:

1. Average value at typical operating and mounting conditions.
2. Maximum value over recommended operating range and over radial & axial mounting tolerances.

## Linearity Definitions

### Integral non-linearity

Integral non-linearity (INL) is the maximum deviation between actual angular position and the position indicated by the encoder's output count, over one revolution. It is defined as the most positive linearity error +INL or the most negative linearity error -INL from the best fit line, whichever is larger.

### Differential non-linearity

Differential non-linearity (DNL) is the maximum deviation of the step length from one position to the next.

Figure 3. Integral non-linearity

**Table 6. Environmental Specifications**

| Parameter                                      | Reference Standard | Test Conditions   | Level   |
|--|--------------------|---|---------|
| <b>Electromagnetic Compatibility (EMC) [1]</b> |                    |   |         |
| Electrostatic discharge (ESD) immunity         | IEC/EN 61000-4-2   | 8kV   |         |
| Power frequency magnetic field immunity        | IEC/EN 61000-4-8   | 30 A/m (continuous field)<br>300 A/m (short duration field) | Level 4 |
| Pulse magnetic field immunity                  | IEC/EN 61000-4-97  | 1000 A/m  | Level 5 |
| Damped oscillatory magnetic field immunity     | IEC/EN 61000-4-10  | 100 A/m   | Level 5 |
| <b>Mechanical Durability</b>                   |                    |   |         |
| Vibration (Operating)                          | IEC/EN 60068-2-6   | 10-500Hz at 5G  |         |
| Shock  | IEC/EN 60068-2-27  | 6ms at 200G   |         |

Notes:

1. Suitable for applications in Industrial Environment Class 4.

## Electrical Connections

| Pin | Symbol | Description                          |
|-----|--------|--------------------------------------|
| 1   | VDD    | 5V Supply Voltage                    |
| 2   | CSn    | Chip Select - Input (See Figure 2)   |
| 3   | VSS    | Supply Ground                        |
| 4   | CLK    | Serial Clock - Input (See Figure 2)  |
| 5   | DO     | Serial Data - Output. (See Figure 2) |

Figure 4. Electrical Connections
