DESCRIPTION:

The IDT54/74FCT161/163, IDT54/74FCT161A/163A and IDT54/74FCT161C/163C are high-speed synchronous modulo-16 binary counters built using an advanced dual metal CMOS technology. They are synchronously presettable for application in programmable dividers and have two types of count enable inputs plus a terminal count output for versatility in forming synchronous multistage counters. The IDT54/74FCT161/A/C have asynchronous Master Reset inputs that override all other inputs and force the outputs LOW. The IDT54/74FCT163/A/C have Synchronous Reset inputs that override counting and parallel loading and allow the outputs to be simultaneously reset on the rising edge of the clock.
