

Robust, reliable
analog solutions

MC33771 and MC33664 Battery Cell Controller and Transformer Physical Layer

The MC33664 transformer physical layer and MC33771 battery cell controller solution enable reliable, safe low-cost Li-ion cell control applications with affordable, robust and high-speed isolated communication.

AUTOMOTIVE APPLICATIONS

- ▶ High-voltage battery management systems (> 800 V)
- ▶ 48 V battery management systems

INDUSTRIAL APPLICATIONS

- ▶ Energy storage systems (ESS)
- ▶ Uninterrupted power supply (UPS)
- ▶ E-bikes, E-scooters

These fully integrated battery monitoring devices are for automotive and industrial mission-critical applications. Battery topology flexibility is supported with compatibility including 48 V batteries with one analog front end (AFE).

High-speed and robust daisy chain provides a smart alternative to CAN solutions. Fast data acquisition and communication to the pack controller can be achieved in only 3.0 ms for the pack controller to acquire conversions from 96 cells. Also, determination of individual cell impedances in one shot is synchronized for cell voltages and current measurements within 114 μ s.

With functional verification and diagnostics, the MC33664 transformer physical layer and MC33771 battery cell controller support ISO 26262 SafeAssure[®] functional safety. Functional verification of cell measure, current measure, cell

terminal openings or leakage and ADC precision checks are all performed.

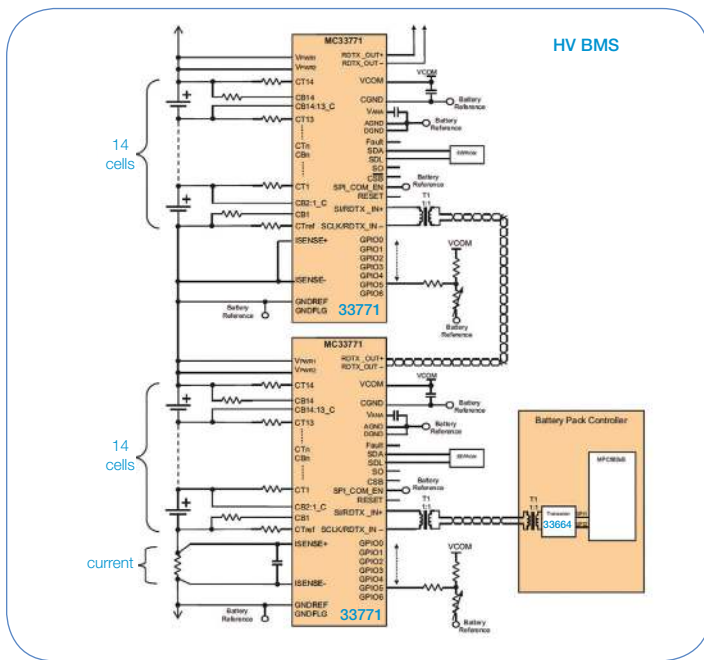

FEATURES

- ▶ 9.6 V \leq VPWR \leq 61.6 V operation, 75 V transient
- ▶ SPI or isolated 2.0 MHz differential communication
- ▶ 14 x differential cells voltage and stack voltage measurements
- ▶ High-precision current measurement (+/- 1500 A) with low resolution
- ▶ Coulomb counter
- ▶ Synchronized cell voltage/current measurement 100 μ s skew
- ▶ 7 x ADC/GPIO/temperature sensor inputs
- ▶ Addressable on initialization
- ▶ Onboard 300 mA passive cell balancing low ohmic MOSFETS
- ▶ Low-power modes
- ▶ 64-pin QFP package
- ▶ Functional verification and diagnostics for single-chip ISO 26262 ASIL C systems

Features	Benefits
Integrated current channel and coulomb counting	Reduces bill of materials (BOM) for 48 V battery applications (only one AFE required)
Integrated current channel synchronized with cell voltage measurements	Determination of individual cell impedances in one shot for improved SoC/SoH prediction
Optional high-speed isolated or SPI communication	Addresses all existing battery management system topologies (centralized, distributed daisy chain, distributed CAN)
High-speed (2.0 Mbit/s) isolated high-speed differential communication	Allows BOM cost reduction by transition from CAN to daisy chain without compromise on communication speed
Fast data acquisition and communication to pack controller	Determination of individual cell impedances in one shot, synchronized cell voltages and current measurements within 114 μ s
Robust against hot plug and random cell connection	No pre-damaging of cell and no damaging of devices during customer battery/electronics assembly
ESD/EMC robustness	Strong electrostatic discharge (ESD) protection and electromagnetic compatibility (EMC) avoid the need for external components
Supports ISO 26262 SafeAssure [®] functional safety with single package solution	Has functional verification and diagnostics
Low-level drivers	Simplifies software development and reduces switching cost
