## Description

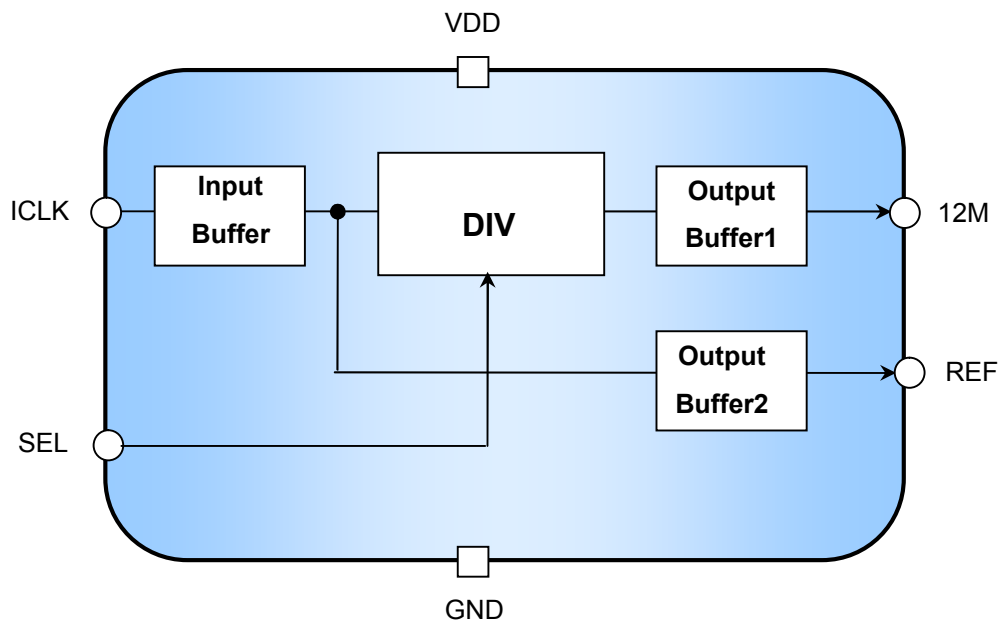

The AK8153A is a high performance clock generator IC with two outputs. It generates 12MHz clock by dividing 60M or 72MHz input clock. And also outputs REF clock which is to be ICLK.

AK8153A provides very low jitter and highly accurate clock output without an external crystal.

## Applications

- Digital Still Camera
- Digital Video Camera

Note:

(1) Stress beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated under “Recommended Operating Conditions” is not implied. Exposure to absolute-maximum-rating conditions for extended periods may affect device reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

## ESD Sensitive Device

This device is manufactured on a CMOS process, therefore, generically susceptible to damage by excessive static voltage. Failure to observe proper handling and installation procedures can cause damage. AKM recommends that this device is handled with appropriate precautions.
