

## 50V, 500mA, Low-I<sub>Q</sub> 40μA Low-Dropout Linear Regulator with Enable, Reset, Watchdog Functions

### DESCRIPTION

The TQL850CSV33 is a high-performance low dropout linear regulator for 3.3V with input range of 3V to 50V and low quiescent 40μA. TQL850CSV33 provides 2% output voltage accuracy and 500mA maximum driving current and is suitable for automotive or other supply systems. TQL850CSV33 just requires one small ceramic capacitor of 1μF to exhibit fast regulation and good stability. And it shows very low dropout voltage with typical 60mV in 100mA-load and 150mV in 250mA-load. The start operating voltage is 3V which is suitable to cranking condition of automotive system.

The device has an enable function to switch ON and OFF for power dissipation. And other protection functions such as thermal-shutdown and current-limit are against immediate damage.

### APPLICATION

- Automotive Power Supply Systems
- General Power Supply applications

### FEATURES

- AEC-Q100 qualified with the following results:
  - Device temperature grade 1: -40°C to 125°C
  - Device HBM ESD classification level H2
  - Device CDM ESD classification level C3
- 3V to 50V Input Voltage Range
- 3.3V Fixed Output Voltage
- Typical 60mV @100mA Low Dropout Voltage
- 500mA Output Current
- Typical 40μA Low Quiescent Current
- Typical ±2% Output Voltage Accuracy
- 1μF Ceramic Output Stable Capacitor
- Output Current Limit
- Over Temperature Protection
- RoHS Compliant
- Halogen-Free according to IEC 61249-2-21

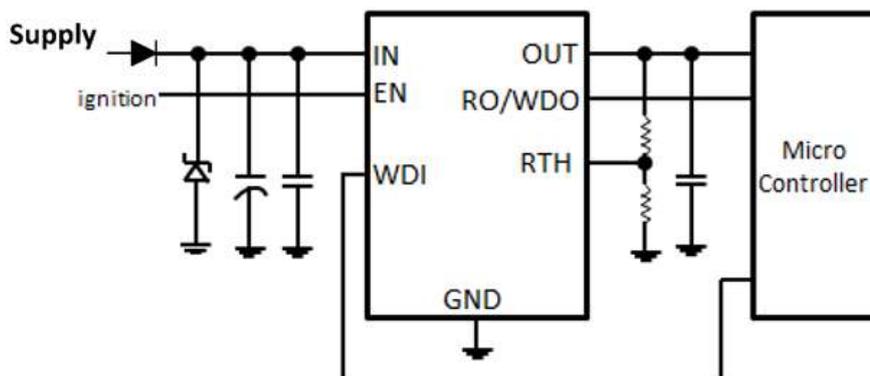

### Pin Definition:

- |           |        |
|-----------|--------|
| 1. IN     | 5. RTH |
| 2. EN     | 6. WDI |
| 3. RO/WDO | 7. NC  |
| 4. GND    | 8. OUT |

**Notes:** MSL 3 (Moisture Sensitivity Level) per J-STD-020

### TYPICAL APPLICATION CIRCUIT

<b>ABSOLUTE MAXIMUM RATINGS</b> ( $T_A = 25^\circ\text{C}$ unless otherwise specified) (Note 1)			
PARAMETER	SYMBOL	LIMIT	UNIT
Power Supply Pin	$V_{IN}$	55	V
EN Voltage to GND	$V_{EN}$	-0.3 to 55	V
OUT/RO/WDO Voltage to GND	$V_{OUT}/V_{RO}/V_{WDO}$	-0.3 to 7	V
WDI/RTH Voltage to GND	$V_{WDI}/V_{RTH}$	-0.3 to 7	V
Junction Temperature Range	$T_J$	-40 to +150	$^\circ\text{C}$
Storage Temperature Range	$T_{STG}$	-55 to +150	$^\circ\text{C}$
ESD Rating (Human Body Model) (Note 2)	HBM	$\pm 2$	kV
ESD Rating (Charged Device Model)	CDM	$\pm 1$	kV

<b>THERMAL PERFORMANCE</b>			
PARAMETER	SYMBOL	TYP	UNIT
Junction to Case Thermal Resistance	$R_{\theta JC}$	12	$^\circ\text{C}/\text{W}$
Junction to Ambient Thermal Resistance	$R_{\theta JA}$	50	$^\circ\text{C}/\text{W}$

**Notes:** The thermal data is based on the PCB JESD 51-3 at natural convection on 1s0p board with 1 copper layer (1 x 70 $\mu\text{m}$  Cu) and with 300mm<sup>2</sup> heatsink area on PCB

<b>RECOMMENDED OPERATING CONDITIONS</b> (Note 3)			
PARAMETER	SYMBOL	CONDITIONS	UNIT
Power Supply Pin	$V_{IN}$	$V_{OUT} + V_{dr}$ to 50	V
Extended Power Supply Pin	$V_{IN,ext}$	3 to 50	V
EN Voltage to GND	$V_{EN}$	0 to 50	V
Output Stable Capacitor	$C_{OUT}$	$\geq 1$	$\mu\text{F}$
ESR of Output Capacitor	ESR	$\leq 100$	$\Omega$
Operating Junction Temperature Range	$T_J$	-40 to +150	$^\circ\text{C}$
Operating Ambient Temperature Range	$T_{OPA}$	-40 to +125	$^\circ\text{C}$

<b>ELECTRICAL SPECIFICATIONS</b> ( $V_{IN} = 13.5\text{V}$ , $T_J = -40$ to $150^\circ\text{C}$ unless otherwise noted)						
PARAMETER	CONDITIONS	SYMBOL	MIN	TYP	MAX	UNIT
<b>Supply Voltage</b>

Maximum Filter Time By WDI (Note 4)		$t_{FWDI,max}$	--	--	500	$\mu s$

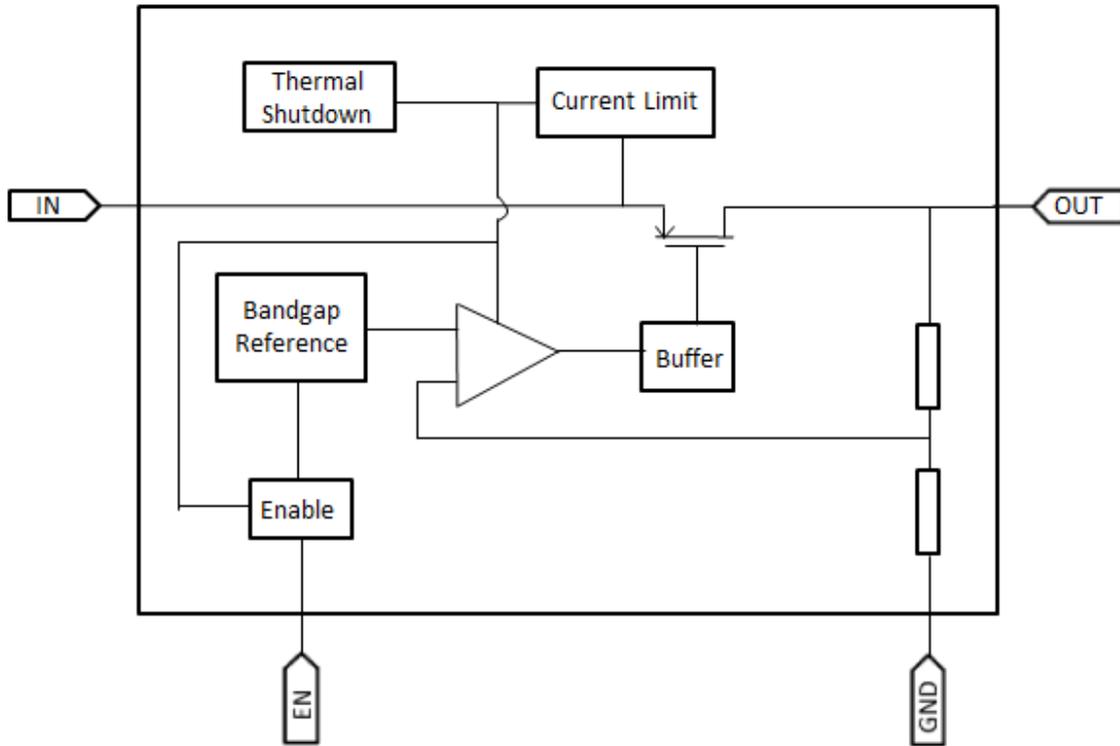

**Note:**

1. Stresses listed as the above "Absolute Maximum Ratings" may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.
2. Devices are ESD sensitive. Handling precaution recommended.
3. The device is not guaranteed to function outside its operating conditions.
4. Guaranteed by design.

**ORDERING INFORMATION**

ORDERING CODE	PACKAGE	PACKING
TQL850CSV33 RLG	SOP-8EP	2,500pcs / 13" Reel

**BLOCK DIAGRAM**

**PIN DESCRIPTION**

PIN NO.	NAME	FUNCTION
1	IN	Power supply pin for system
2	EN	Enable system function
3	RO/WDO	Reset and watchdog output
4	GND	Ground
5	RTH	Reset threshold adjustment
6	WDI	Watchdog monitor input
7	NC	No connect
8	OUT	Output supply voltage
Pad	--	Connect to GND

## APPLICATION INFORMATION

TQL850CSV33 is a high-performance low dropout voltage regulator. The device operates with a wide input voltage from 3V to 50V and up to 500mA of output current. It also provides a high accuracy output voltage for  $\pm 2\%$  in all the load and line regulation.

### Reset

The TQL850CSV33 is monitored by Reset system including Power-ON Delayed Reset, Under-Voltage Reset, and Reset Threshold Adjustment. When reset is activated, the RO/WDO pin is low.

#### ■ Power-ON Delayed Reset

When device starts up, the RO/WDO pin delays to become “High” in Power-ON Delayed Time ( $t_{RD}$ ) without reset issue.

#### ■ Under-Voltage Reset

When the output supply voltage drops below UVLO Reset Lower Threshold ( $V_{RTL}$ ), the RO/WDO switches from “High” to “Low”. The RO/WDO pin is an open collector output with an internal pull-up resistor.

#### ■ Reset Threshold Adjustment

The UVLO Reset Lower Threshold can be adjusted. If the RTH pin connects to GND, the threshold voltage is default value ( $V_{RTL}$ ). We can take two resistors ( $R_{th1}$ ,  $R_{th2}$ ) to adjust under-voltage threshold. The  $R_{th1}$  is connected between OUT pin and RTH pin and  $R_{th2}$  is connected between RTH and GND. The reminder is taking proper resistance for current sourcing. The new threshold voltage is calculated as follows:

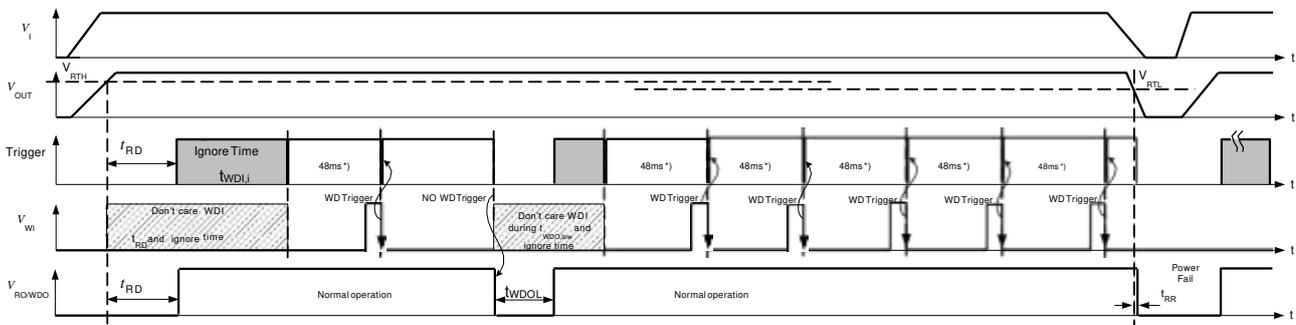

$$V_{RTL,new} = V_{RTTH} \times (R_{th1} + R_{th2}) / R_{th2}$$

- $V_{RTL,new}$  : Desired switching threshold
- $R_{th1}$ ,  $R_{th2}$  : External divider resistors
- $V_{RTTH}$  : Reset adjust switching threshold

### Watchdog

The TQL850CSV33 has the watchdog function with fixed watchdog timing to monitor microcontroller process. The device monitors the period clock-pulse provided by Microcontroller at WDI pin in a certain timing (Watchdog Trigger Time,  $t_{WDI,tr}$ ). If there is no signal in Watchdog Trigger Time, the RO/WDO pin becomes “Low” in a certain time (Watchdog Low Time,  $t_{WDOL}$ ). After that, the RO/WDO pin returns to “High” and keep watching the WDI signal repeatedly. The RO/WDO pin is an open collector output with an internal pull-up resistor.

The Watchdog function is inactivated by WDI pin. While the WDI voltage is in 1.15V to 1.4V, the Watchdog function is disable.

Typical Watchdog Timing Diagram, Watchdog and Reset Modes

## APPLICATION INFORMATION (CONTINUE)

### Enable

The EN pin is high voltage tolerant pin. High input enables the device ON and low is disable which can be connected to microcontroller or digital control system. It can be connected to input power pin directly.

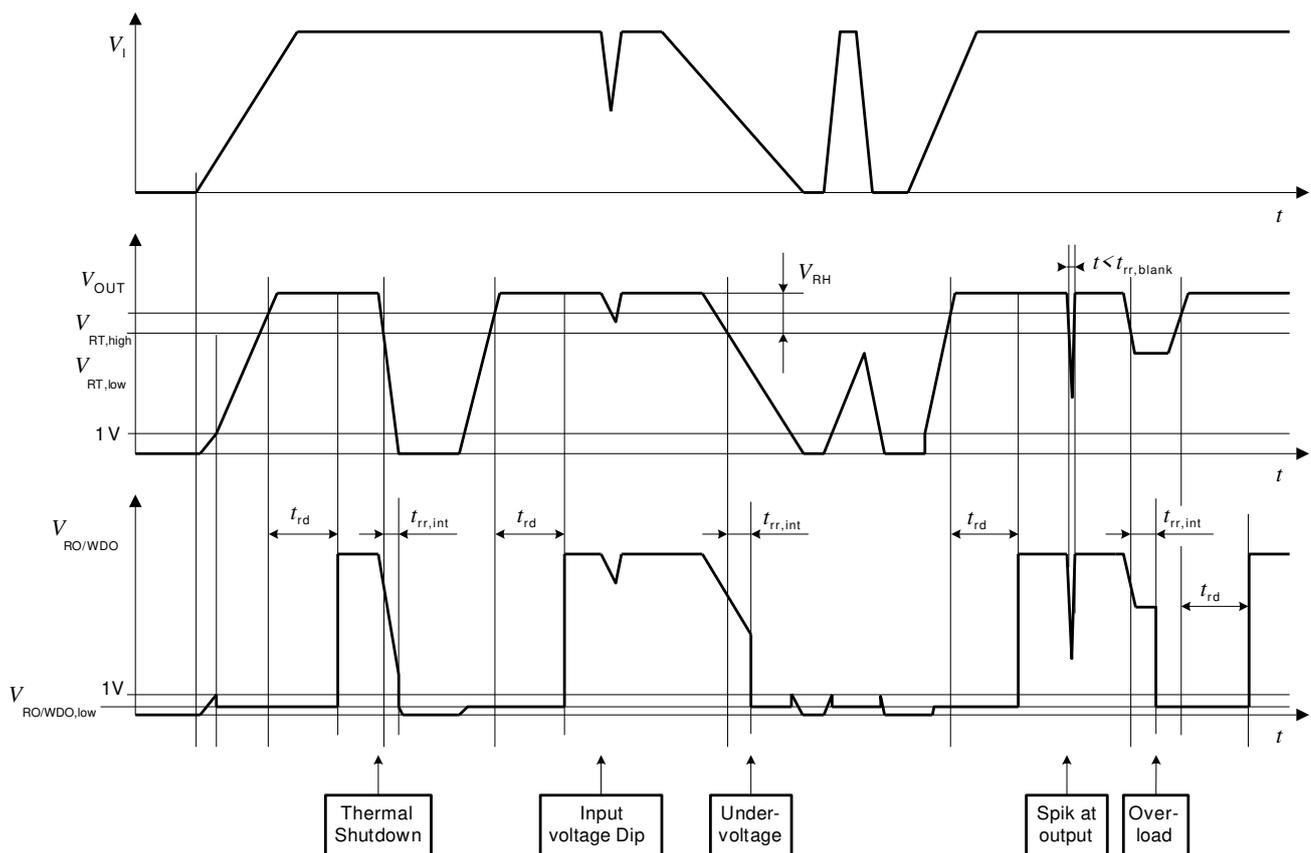

### Thermal Shutdown (TSD)

Internal 160°C comparator will trigger temperature protection (TSD). TSD will shut down system, until internal temperature back to 130°C.

### Current Limit

The TQL850CSV33 features Current Limit function to protect device from damage by excessive power dissipation such as OUT shorted to GND. It limits output current to maintain power dissipation in the safe region.
