

CYTK55 TrueTouch® Evaluation Kit

Last Updated: Apr 23, 2014

The CYTK55 TrueTouch® Evaluation Kit (EVK) is based on the Gen5 family of capacitive Multi-Touch All-Points touchscreen controllers. The TrueTouch® TK55 was created for superphone designers, with support for ten-finger tracking on touchscreens up to 5.3 inches, and passive stylus input capability with built-in palm rejection. The kit comes with a 2 mm passive stylus for easy development and testing. It also delivers Gen5's best-in-class performance: high signal-to-noise ratio (SNR), excellent charger noise immunity, fast refresh rates, low power, and built-in waterproofing.

CYTK55 EVK Contents:

- TrueTouch® evaluation kit with 5.3” touch panel enclosed in plastic casing
- 2 mm passive stylus
- Micro-USB cable
- USB drive with documentation, TrueTouch® Host Emulator, and design files
