
WFI32-IoT Board User's Guide

Introduction

The WFI32-IoT board is a compact, stand-alone and easy-to-use board that helps the user to develop the Internet-of-Things (IoT) applications with the WFI32E01PC module, a highly integrated Wi-Fi[®] MCU module that supports smart Wi-Fi functionalities and premium MCU features. The WFI32E01PC module has a PCB antenna and Trust&GO hardware secure element, which is pre-provisioned to popular cloud platforms.

The WFI32-IoT board:

- Provides an easy way to connect the embedded application to cloud IoT platforms, such as AWS and Azure
- Includes a PICKit On-board 4 (PKOB4) debugger interface, and requires no external hardware to program and debug the WFI32E01PC module
- Includes a mikroBUS[™] Click[™] header, which helps the users to expand the functionalities by connecting to various MikroElektronika mikroBUS[™] Click[™] adapter boards
- Requires only a Micro USB cable to power up and program the board

Features

- Certified WFI32E01PC Module
- Four User LEDs
- Two User Configurable Switch
- One Reset Switch
- On-board Temperature Sensor
- On-board Light Sensor
- 32-Mbit External SPI Flash Memory
- mikroBUS[™] Socket to Expand Functionality using MikroElektronika Click Boards
- Li-Ion/LiPo Battery Charger with Power Path Management

Acronyms and Abbreviations	Description
ICSP	In-Circuit Serial Programming
IoT	Internet of Things
JTAG	Joint Test Action Group
LDO	Low-Dropout
LED	Light Emitting Diode
MCU	Microcontroller
NC	Not Connected
OOB	Out of Box
OTG	On-The-Go
PCB	Printed Circuit Board
PKOB	PICKit On-Board
PPS	Peripheral Pin Select
PWM	Pulse Width Modulation
RMII	Reduced Media Independent Interface
RTCC	Real Time Clock and Calendar
RTOS	Real-Time Operating System
RX	Receiver
SCL	Serial Clock
SDA	Serial Data
SMD	Surface Mount
SoC	System-on-Chip
SPI	Serial Peripheral Interface
TX	Transmitter
UART	Universal Asynchronous Receiver-Transmitter
USB	Universal Serial Bus

2. Kit Overview

The WFI32-IoT board has a single-chip Wi-Fi module that supports rapid prototyping of IoT devices and demonstrates cloud connectivity.

The WFI32-IoT board:

- Offers various types of on-board sensors, such as a temperature sensor and ambient light sensor to build their own applications
- Provides on-board sensors that help the user to collect the sensor data and transmit to the cloud
- Provides the WFI32E01PC module, which has a built-in crypto device that helps to make a secure and authenticated cloud connection

Figure 2-1. WFI32-IoT Board (EV36W50A) – Top View

Figure 2-2. WFI32-IoT Board (EV36W50A) – Bottom View

2.1 Kit Contents

The EV36W50A (WFI32-IoT board) kit contains the following:

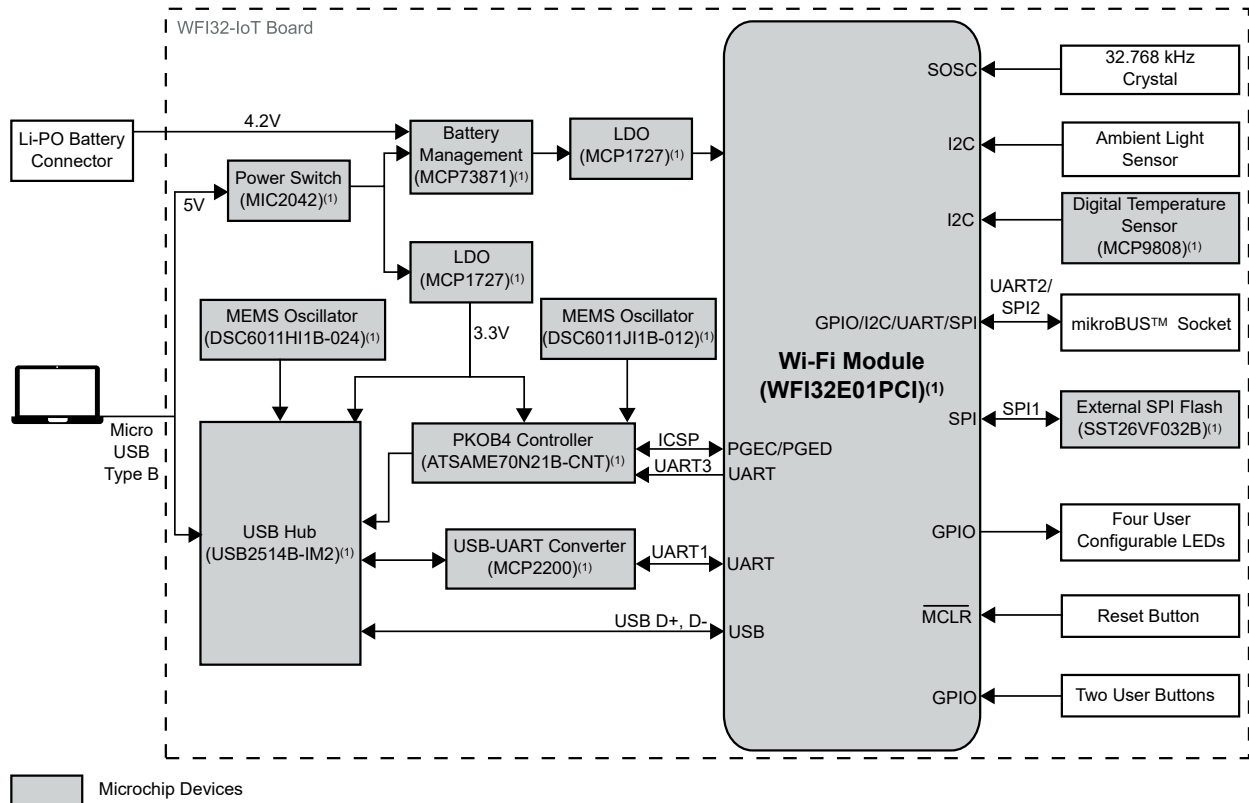

- A WFI32E01PC module mounted on the WFI32-IoT board
- A Type-A male to Micro-B USB cable

Note: If any of the above items are missing in the kit, go to support.microchip.com or contact your local Microchip Sales office. In this user guide, there is a list of Microchip offices for sales and services provided on the last page.

3. Hardware

This chapter describes the hardware features of the WFI32-IoT board.

Figure 3-1. WFI32-IoT Board Block Diagram

Note:

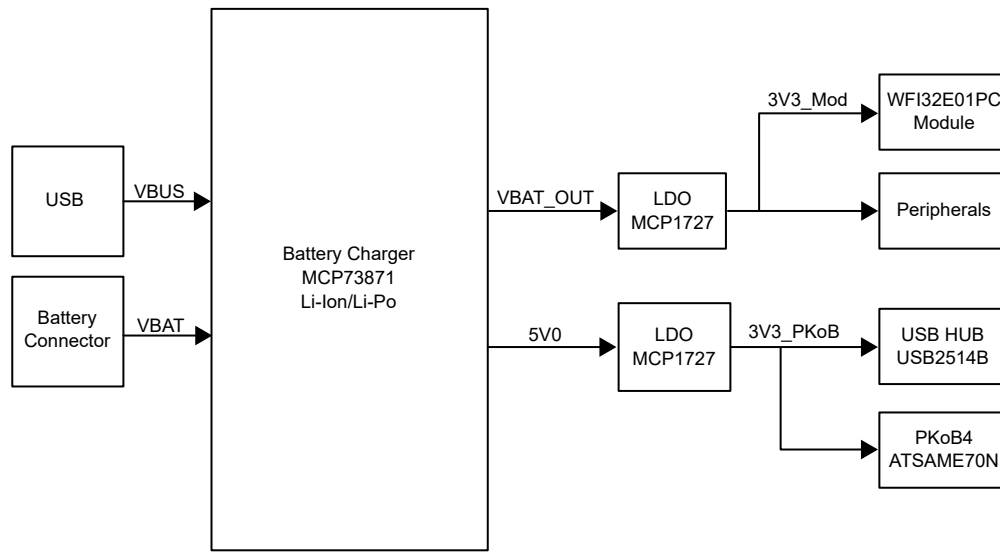

1. Using Microchip's total system solution, which includes complementary devices, software drivers and reference designs, is highly recommended to ensure the proven performance of the WFI32-IoT boards. For more details, go to support.microchip.com or contact your local Microchip Sales office.

3.1 Power Supply

The following are the power supply sources to power the WFI32-IoT board; see the following figure:

- PKOB4 Micro-B USB (Debug USB) ([J200](#))
- Battery Header ([J101](#))

Figure 3-2. WFI32-IoT Board Power Supply Block Diagram

PKoB4 Micro-B USB (Debug USB) (J200)

The Debug USB (J200) supplies power to the WFI32-IoT board from the host PC using Type-A male to Micro-B USB cable.

Note: The maximum available current from the Debug USB (J200) is limited to 500 mA. The current is shared between charging the external battery (if connected) and the target application section.

Battery Header (J101)

Connect a 4.2V Li-ion/Li-Po battery to the battery header (J101).

Notes:

1. The 4.2V Li-ion/Li-Po battery is not a part of the EV36W50A kit.
2. The minimum recommended battery capacity is 400 mAh with a battery charge voltage of 4.2V.
3. Uses a standard battery connector, which is a 2 pin, 2 mm pitch and right angle male battery header.

3.1.1 Li-ion/Li-Po Battery Charger (U101)

The WFI32-IoT board features an on-board MCP73871 Li-ion/Li-Po battery charger. The battery management circuit automatically handles the selection between the USB power supply and battery supply. The current is shared between charging the battery (if connected) and the target application section. For more details on the MCP73871 Li-ion/Li-Po battery charger, refer to the *Stand-Alone System Load Sharing and Li-Ion/Li-Polymer Battery Charge Management Controller Data Sheet (DS20002090)*.

Note: The charger is configured to limit the charge current to 100 mA to prevent the overcharging of small capacity batteries.

The MCP73871 has a battery charge voltage of 4.2V and ensures that the battery has the same charge voltage.

3.1.2 Voltage Regulators (U102 and U104)

The following are the two on-board MCP1727 voltage regulators on the WFI32-IoT board that generate +3.3V power supply:

- **U102** – Generates +3.3V that powers the WFI32E01PC module along with the associated circuits

- **U104** – Generates +3.3V that powers the USB hub IC (**U201**), PKOB4 micro controller (**U300**), along with the associated circuits that connect the PKOB4 debugger to a host PC

For more details on the **U102** and **U104** voltage regulators, refer to the *MCP1727 1.5A, Low Voltage, Low Quiescent Current LDO Regulator Data Sheet (DS21999)*.

3.1.3 Power Measurement Header (J400)

The current measurement header (**J400**) measures the total current consumed by the WFI32E01PC module using a multimeter. To measure the total current consumption of the WFI32E01PC module, remove the jumper (**JP401**) from the **J400** header and connect a voltmeter across its pins. A 1Ω resistor option available on-board across the jumper gives a 1:1 relationship between the voltage drop and current consumption.

For the direct current measurement, use a jumper wire to short the **J400** pin 1-2 and connect a current clamp probe, for example, the TEKTRONIX TCP0030A current probe. The normal probes with long wires may add a load to the current path and introduce a voltage drop, which leads to incorrect readings.

For the current measurement in terms of voltage, mount the R400 with 0.1Ω resistor for Active mode and 1Ω resistor for Sleep mode current consumption using a voltage probe or multimeter.

3.2 MPLAB PICKit On-Board 4 (PKOB4)

The MPLAB PICKit On-Board 4 (PKOB4) is a new generation of in-circuit debugger. The MPLAB PKOB4 programs faster than its predecessor and is designed to use a high-speed USB 2.0 interface, providing a feature-rich debugging experience via one USB cable. The MPLAB PKOB4 is intended to support the programming and debugging interface. For more details on the MPLAB PKOB4, refer to the *MPLAB Snap In-Circuit Debugger User's Guide (DS50002787)*.

Features

- Connects to a computer through a Micro-B USB cable
- Programs devices using MPLAB X IDE or MPLAB X IPE
- Supports multiple hardware and software breakpoints, stopwatch and source code file debugging
- Debugs the application in real time
- Sets breakpoints based on internal events
- Monitors internal file registers
- Debugs at full speed
- Configures pin drivers
- Field-upgradeable through an MPLAB X IDE firmware download
- Adds new device support and features by installing the latest version of MPLAB X IDE
Note: The MPLAB X IDE is available for free at www.microchip.com/mplab-x-ide.
- Indicates debugger status using on-board LEDs

3.2.1 Recovery Method

When the MPLAB PKOB4 is unresponsive, use the MPLAB X IDE tool to recover the WFI32-IoT board through the following recovery method:

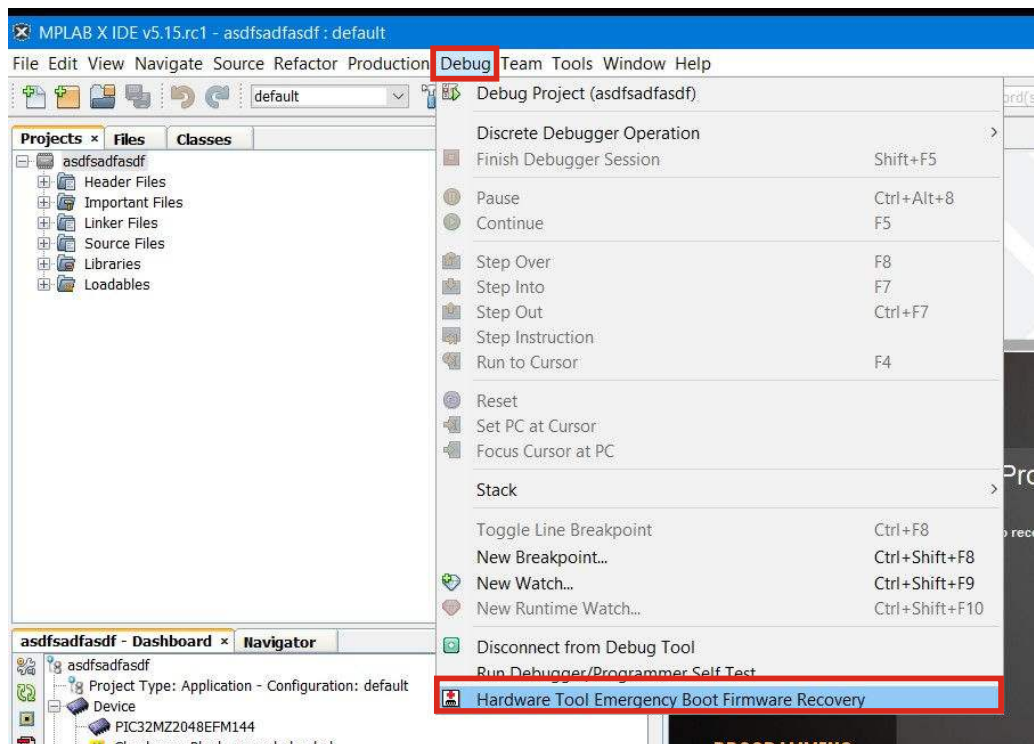

1. Short the pin1 and pin2 of the connector (**J301**) to the ground for approximately 15 seconds; see the following figure.
Note: Ensure that the WFI32-IoT board is turned ON to perform the recovery method.

Figure 3-3. WFI32-IoT Board (EV36W50A) – Recovery Method

2. Open the latest version of MPLAB X IDE.
3. The following figure illustrates the opening window of the MPLAB X IDE. From the “Debug” drop-down list, select *Hardware Tool Emergency Boot Firmware Recovery*.

Figure 3-4. MPLAB® X IDE Opening Window

4. Follow the instructions shown in the preceding figure to bring the tool back to factory condition. For additional information on the MPLAB PKOB4, refer to the *MPLAB® PICKit™ 4 In-Circuit Debugger User's Guide (DS50002751)* and *MPLAB Snap In-Circuit Debugger User's Guide (DS50002787)*.

3.3 USB Connectivity

The WFI32E01PC module has an integrated full-speed USB peripheral. This feature enables the user to implement USB functionality through the Micro-AB USB connector (J200) on the WFI32-IoT board.

3.4 mikroBUS Socket

A mikroBUS socket (J402) expands the functionality of the WFI32-IoT board using the MikroElektronika mikroBUS™ Click™ adapter boards. The mikroBUS connector consists of the following:

- Serial Peripheral Interface (SPI)
- Inter-Integrated Circuit (I2C)
- Universal Asynchronous Receiver-Transmitter (UART)
- Reset (GPIO)
- Pulse Width Modulation (PWM)
- Analog and interrupt lines
- 3.3V and 5V power lines

Table 3-1. mikroBUS Socket Pinout Details

Pin Number	Pin on mikroBUS Socket	Pin Description of mikroBUS Socket	Pin on WFI32E01PC Module ⁽¹⁾
1	AN	Analog input	AN14/ANN0/CVD14/CVDR14/RPA14/RA14
2	RST	Reset	ETH_CLK_OUT/CVDT10/RPC12/RC12
3	CS	SPI Chip Select	CVDT13/ETXD0/RPC15/RC15
4	SCK	SPI Clock	SCK2/RPA11/RA11
5	MISO	SPI Host Input Client Output	PTA_WLAN_ACTIVE/RPK5/RK5
6	MOSI	SPI Host Input Client Input	BT_CLK_OUT/RPK4/RK4
7	+3.3V	3.3V power	+3.3V
8	GND	Ground	GND
9	GND	Ground	GND
10	+5V	5V power	+5V
11	SDA	I2C Data	SDA1/RPA5/RA5
12	SCL	I2C Clock	SCL1/RPA4/RA4
13	TX	UART transmit	PTA_BT_ACTIVE/RPK7/RK7
14	RX	UART receive	TDI/PGD4/AN9/CVD9/CVDR9/RPB9/RB9
15	INT	Hardware interrupt	ANN1/CVD15/CVDR15/RPA13
16	PWM	PWM output	ANA0/RPB12/RB12

Notes:

1. For more details on the WFI32E01PC module pins, refer to the *PIC32MZ1025W104 MCU and WFI32E01 module with Wi-Fi® and Hardware-based Security Accelerator Data Sheet (DS70005425)*.
2. The SPI interface on the click board can operate up to 12.5 MHz, and the WFI32E01PC module supports up to 20 MHz.
3. To have a fully functional UART click board, the R432 and R435 (default) resistors are populated on the WFI32-IoT board.
4. To have a fully functional CAN click board, populate the R433 and R434 resistors on the WFI32-IoT board.
5. To have a fully functional OLED click board, depopulate the R436 resistor on the WFI32-IoT board.

3.5 Switches

The following are the available switches on the WFI32-IoT board:

- User-configurable switches – (SW400) and (SW401)
- Reset switch (SW402) – Connected with the $\overline{\text{MCLR}}$ signal of the WFI32E01PC module

In the Idle state, the level of the user-configurable switch is pulled high (+3.3V) and, when the switch is pressed, it drives the I/O line to low (GND).

Table 3-2. Switches Description

Switch Name	Description	Pin on WFI32E01PC Module
SW400	User configurable switch2	PGC4/TCK/AN8/CVD8/CVDR8/RPB8
SW401	User configurable switch1	INT0/AN17/CVD17/CVDR17/RPA10
SW402	Reset switch	$\overline{\text{MCLR}}$

3.6 LEDs

The WFI32-IoT on-board LEDs are categorized into three types:

- Power LEDs
 - Green (D101) – Charge indicator
 - Red (D100) – Low battery indicator
 - Blue (D102) – Power indicator
- PKOB4 LEDs
 - Green (D300) – ACTIVE indicator
 - Yellow (D301) – STATUS indicator
- LEDs related to the WFI32E01PC module:
 - Red LED (D400)
 - Yellow LED (D401)
 - Green LED (D402)
 - Blue LED (D403)

The following table lists the LEDs that can be turned ON or OFF using the connected GPIO pins.

Table 3-3. LEDs Description

LED Name	Description	Pin on WFI32E01PC Module
Red LED (D400)	User configurable LED1	ERXDV/CVDT14/RPK12
Yellow LED (D401)	User configurable LED2	EMDIO/CVDT15/RPK13
Green LED (D402)	User configurable LED3	EMDC/CVDT16/RPK14
Blue LED (D403)	User configurable LED4	ERXERR/CVDT7/RPC9

3.7 Temperature Sensor

The MCP9808 digital temperature sensor converts temperatures between -20°C and +100°C to a digital word with $\pm 0.25^\circ\text{C}/\pm 0.5^\circ\text{C}$ (typical/maximum) accuracy. For more details, refer to the *MCP9808 $\pm 0.5^\circ\text{C}$ Maximum Accuracy Digital Temperature Sensor* (DS20005095).

The following are the additional features of the MCP9808 digital temperature sensor:

- Accuracy

- $\pm 0.25^{\circ}\text{C}$ (typical) from -40°C to $+125^{\circ}\text{C}$
- $\pm 0.5^{\circ}\text{C}$ (maximum) from -20°C to $+100^{\circ}\text{C}$
- User-Selectable Measurement Resolution
 - 0.5°C
 - 0.25°C
 - 0.125°C
 - 0.0625°C
- User-Programmable Temperature Limits
 - Temperature Window Limit
 - Critical Temperature Limit
- User-Programmable Temperature Alert Output
- Operating Voltage Range – 2.7-5.5V
- Operating Current – 200 μA (typical)
- Shutdown Current – 0.1 μA (typical)

The MCP9808 temperature sensor is connected to the WFI32E01PC module through I²C and a GPIO for the user-configurable alert output.

Note: 7-bit I2C address – 0x18

Table 3-4. MCP9808

Pin Name	Description	Pin on WFI32E01PC Module
SDA	I2C Data	SDA1/RPA5
SCL	I2C Clock	SCL1/RPA4
Alert	ASYNCR external interrupt	TDO/AN7/CVD7/CVDR7/CVDT0/RPB7

3.8 Ambient Light Sensor

A OPT3001 is a sensor that measures the intensity of visible light. The light sensor is mounted on the WFI32-IoT board for measuring the light intensity.

Table 3-5. Light Sensor

Pin Name	Description	Pin on WFI32E01PC Module
SDA	I2C Data	SDA1/RPA5
SCL	I2C Clock	SCL1/RPA4
INT	Interrupt output open-drain	TMS/AN6/CVD6/CVDR6/CVDT1/RPB6

3.9 Serial Flash

The WFI32-IoT board has an on-board 32-Mbit external SPI Flash (SST26VF032B) memory for the storage of data. For more details on the serial Flash, refer to the *SST26VF032B/SST26VF032BA 2.5V/3.0V 32-Mbit Serial Quad I/O™ (SQI™) Flash Memory Data Sheet (DS20005218)*. The following table describes the details of the serial Flash pin connection.

Table 3-6. Serial Flash Pin Description

Pin Number	Pin on Serial Flash (SST26VF032B)	Pin Description of Serial Flash	Pin on WFI32E01PC Module ⁽¹⁾
1	$\overline{\text{CE}}$	Chip Enable	SPI1CS/RPA1/RA1
2	SO	Serial Data Output for SPI mode	SDI1/RPC7/RC7

.....continued			
Pin Number	Pin on Serial Flash (SST26VF032B)	Pin Description of Serial Flash	Pin on WFI32E01PC Module ⁽¹⁾
3	WP	Write-Protect	Not connected
4	VSS	Ground	GND
5	SI	Serial Data Input for SPI mode	SDO1/RPC8/RC8
6	SCK	Serial Clock	SCK1/RPC6/RC6
7	HOLD	Hold	Not connected
8	VDD	Input power supply	VDD

Note:

- For more details on the WFI32E01PC module pins, refer to the *PIC32MZ1025W104 MCU and WFI32E01 Module with Wi-Fi[®] and Hardware-based Security Accelerator Data Sheet (DS70005425)*.

3.10 Secondary Oscillator

The secondary oscillator (Y400) pin has an on-board 32.768-kHz crystal connected to the SOSCO/PK15 and SOSCI/PB15 pins of the WFI32E01PC module for the RTCC application.

3.11 WFI32E01PC Module

For more details on the WFI32E01PC module pinout details, refer to the *PIC32MZ1025W104 MCU and WFI32E01 Module with Wi-Fi[®] and Hardware-based Security Accelerator Data Sheet (DS70005425)*.

Note: The user can configure the Peripheral Pin Select (PPS) pins for any of the supported peripheral functions based on the end user application.

4. WFI32-IoT Board Out of Box Demo

The WFI32-IoT board's Out of the Box (OOB) demo is preloaded with a firmware image that enables the user to quickly connect and send data to the AWS cloud using the on-board temperature and light sensors. The users can easily build their own custom projects with software libraries and example codes provided in Harmony v3 framework. The OOB demo connects to the cloud and allows the user to control the WFI32-IoT board via a web-based interface.

For more details about the code and documentation related to the OOB demo, go to www.github.com/MicrochipTech/WFI32-IoT.

6. Appendix: B Regulatory Approval

This equipment (WFI32-IoT Board/EV36W50A) is an evaluation kit and not a finished product. It is intended for laboratory evaluation purposes only. It is not directly marketed or sold to the general public through retail; it is only sold through authorized distributors or through Microchip. Using this requires a significant engineering expertise towards understanding of the tools and relevant technology, which can be expected only from a person who is professionally trained in the technology.

Regulatory compliance settings have to follow the WFI32E01PC module certifications. The following regulatory notices are to cover the requirements under the regulatory approval.

6.1 United States

The WFI32-IoT Board (EV36W50A) contains the WFI32E01PC module, which has received Federal Communications Commission (FCC) CFR47 Telecommunications, Part 15 Subpart C “Intentional Radiators” single-modular approval in accordance with Part 15.212 Modular Transmitter approval.

Contains FCC ID: 2ADHKWFI32E01

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Important: FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for uncontrolled environment. The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 8 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. This transmitter is restricted for use with the specific antenna(s) tested in this application for certification.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

6.2 Canada

The WFI32-IoT Board (EV36W50A) contains the WFI32E01PC module, which has been certified for use in Canada under Innovation, Science and Economic Development Canada (ISED, formerly Industry Canada) Radio Standards Procedure (RSP) RSP-100, Radio Standards Specification (RSS) RSS-Gen and RSS-247.

Contains IC: 20266-WFI32E01

This device contains license-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's license-exempt RSS(s). Operation is subject to the following two conditions:

1. This device may not cause interference;
2. This device must accept any interference, including interference that may cause undesired operation of the device.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

1. L'appareil ne doit pas produire de brouillage;
2. L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

This equipment complies with radio frequency exposure limits set forth by Innovation, Science and Economic Development Canada for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 cm between the device and the user or bystanders.

Cet équipement est conforme aux limites d'exposition aux radiofréquences définies par d'Innovation, Sciences et Développement économique Canada pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre le dispositif et l'utilisateur ou des tiers.

6.3 Europe

This equipment (EV36W50A) has been assessed under the Radio Equipment Directive (RED) for use in European Union countries. The product does not exceed the specified power ratings, antenna specifications and/or installation requirements as specified in the user manual. A Declaration of Conformity is issued for each of these standards and kept on file as described in Radio Equipment Directive (RED).

Simplified EU Declaration of Conformity

Hereby, Microchip Technology Inc. declares that the radio equipment type [EV36W50A] is in compliance with Directive 2014/53/EU.

The full text of the EU declaration of conformity is available at www.microchip.com/en-us/development-tool/EV36W50A (See *Conformity Documents*).

7. Document Revision History

Revision	Date	Section	Description
A	02/2022	Document	Initial Revision

The Microchip Website

Microchip provides online support via our website at www.microchip.com/. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to www.microchip.com/pcn and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: www.microchip.com/support

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable". Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.

Legal Notice

This publication and the information herein may be used only with Microchip products, including to design, test, and integrate Microchip products with your application. Use of this information in any other manner violates these terms. Information regarding device applications is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. Contact your local Microchip sales office for additional support or, obtain additional support at www.microchip.com/en-us/support/design-help/client-support-services.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, CryptoMemory, CryptoRF, dsPIC, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Klear, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AgileSwitch, APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, Flashtec, Hyper Speed Control, HyperLight Load, IntellIMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet- Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, TrueTime, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, Augmented Switching, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, Espresso T1S, EtherGREEN, GridTime, IdealBridge, In-Circuit Serial Programming, ICSP, INICnet, Intelligent Paralleling, Inter-Chip Connectivity, JitterBlocker, Knob-on-Display, maxCrypto, maxView, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, NVM Express, NVMe, Omniscient Code Generation, PICDEM, PICDEM.net, PICKit, PICTail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, RTAX, RTG4, SAM-ICE, Serial Quad I/O, simpleMAP, SimpliPHY, SmartBuffer, SmartHLS, SMART-I.S., storClad, SQL, SuperSwitcher, SuperSwitcher II, Switchtec, SynchroPHY, Total Endurance, TSHARC, USBCheck, VariSense, VectorBlox, VeriPHY, ViewSpan, WiperLock, XpressConnect, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, Symmcom, and Trusted Time are registered trademarks of Microchip Technology Inc. in other countries.
