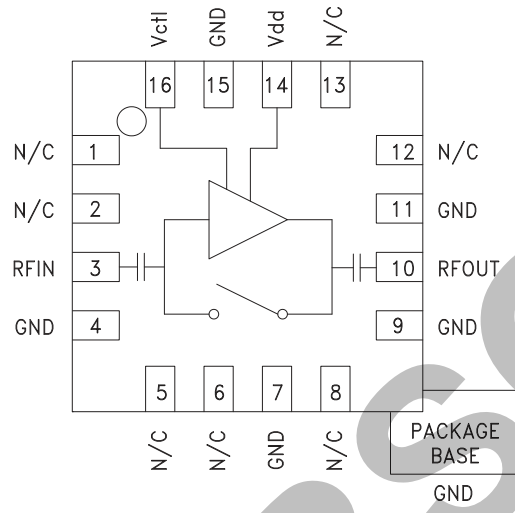
Functional Diagram



General Description

The HMC604LP3(E) is a versatile, high dynamic range GaAs MMIC Low Noise Amplifier that integrates a low loss LNA bypass mode on the IC. The amplifier is ideal for WiMAX & C-band Radio receivers operating between 4.8 and 6.0 GHz and provides 1.5 dB noise figure, 15 dB of gain and +26 dBm IP3 from a single supply of +5V @ 42mA. Input and output return losses are 12 and 14 dB respectively with no external matching components required. A single control line (0/Vdd) is used to switch between LNA mode and a low loss bypass mode which reduces the current consumption to 10 µA.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
