# SL20 with remote shut-down

# **SL20.115**

- Input: AC 115/230V auto select
- Output: 24...28V / 480W (600W)
- 90% efficiency
- Ideal for parallel operation
- Remote shut-down

# Type approval acc. to:

- IEC / EN60950
- EN50178 Overvolt. cat. III EN60204

## **Datasheet**

# Input

Input voltage	AC 100-120V/220-240V, 47-63Hz, auto select	
Rated tolerances • Continuous operation	AC 85132V resp. AC 184264V	
• Short-term (1 min) at 24V/20A	AC 85140V resp. AC 170280V	
Input current I <sub>n</sub>	<10A (115V range); <5A (230V range)	
Inrush current limiting with active bypass of the limiting resistor (NTC).		
Inrush current I <sub>pk</sub>	<18A @ AC 264V ( $T_{amb}$ = +25°C, cold start) <37A @ AC 264V ( $T_{amb}$ = +50°C, cold start)	
Fuse loading I <sup>2</sup> t	$<5A^2s$ (T <sub>amb</sub> = +25°C, cold start) $<8A^2s$ (T <sub>amb</sub> = +50°C, cold start)	

To be fused with a 16A, B-type 'circuit-breaker' switch based on the usual thermomagnetic overload sensing principle (used anyway to fuse the input lines).

EN 61000-3-2 (harmonic current emissions [PFC]) is fulfilled		
Transient handling	Transient resistance acc. to VDE 0160 / W2 (750V/1.3ms), for all load conditions.	
Hold-up time	30ms at 24V/20A, AC 230V <sub>in</sub> 30ms at 24V/20A, AC 120V <sub>in</sub> 15ms at 24V/20A, AC 100V <sub>in</sub>	

# Efficiency, Reliability

Efficiency	typ. 90.5%	(AC 230V, 24V/20A)
Losses	typ. 50W	(AC 230V, 24V/20A)
MTBF		c. to Siemensnorm SN29500 30V, T <sub>amb</sub> = 40°C)
Life cycle (electrolytics)	specified for High reliabi • only five	clusively uses longlife electrolytics r +105°C (cf. 'The SilverLine', p.2) lity, as aluminium electrolytics and aluminium electrolytics are used

## **Further information**

Further information, especially about

- EMC, Connections, Safety, Approvals, Mechanics and Mounting see page 2 of the "The SilverLine" data sheet.
- For detailed dimensions see SilverLine mechanics data sheet SL20.

## **Output** (signal terminals see overleaf)

Parallel operation Yes, up to ten SL20

To achieve current sharing the output V/I characteristic can be altered to be 'softer' (25V at 0.4A, 24V at 20A). This is done by repositioning an external bridge connection (without opening the unit).

Power Back Immunity max. 30V

## **Construction / Mechanics**

Housing dimensions and Weight

220mm x 124mm x 102mm (+ DIN rail) WxHxDabove/below 70mm recommended Free space for ventilation left/right 25mm recommended Weight 2,5kg

Design advantages:

- All connection blocks are easy to reach as mounted on the front panel.
- PVC insulated cable can be used for all connections, as the connection blocks are mounted in the cooler area on the underside of the unit.

## Order information

Order number	Description
SL20.115 SLZ02	(wall mounting set; contains 2 pcs.)

s20e115 / 040114 1/2

# PULS

## Start / Overload Behaviour

Startup delay typ. 0.55s

Rise time appr. 20-80ms, depending on load

Overload behaviour Puls Overload Design (see right-hand diagram)

Advantages:

- No disconnection/hiccup, thus overloading is possible also for a longer period of time (load start-up), ideal for parallel operation.
- High overload/short-circuit current due to straight characteristic; each bias point of the V/I characteristic extends 20A.

Advantage: Due to the high and continuously supplied overload current the unit starts reliably even with awkward loads (DC-DC converters, motors). No 'sticking' can occur as, for example, with fold-back characteristics, and secondary fuses trigger more reliably.

# Signal terminals

The remote On/off control is activated via the signal terminals 'Remote Shutdown 1 and 2'. The unit is delivered with the signal terminals jumpered (control state is 'On' with the terminals jumpered).

#### a) Remote shut-down by switch:

Unit turns on when the signal terminals 'Remote Shutdown 1 and 2' are closed by a switch (R<10 $\Omega$ ).

- Connect the switch contact with the signal terminals Remote Shutdown 1 and 2, only! Ensure the switch contact is not connected to the output voltage or in contact with any separate voltages.
- Unit is in standby mode with open switch contact (R>100kΩ)

#### b) Remote shut-down by control voltage:

Positive voltage is applied to 'Remote Shutdown 1' against minus output (reference potential)

- Unit turns on, when positive voltage (3...30V, 0.3...2mA) is applied to 'Remote Shutdown 1' against the minus output
- Unit switches off at <0.6V</li>
- Input voltages of 0.6...3V and negative voltages are not defined

Parallel operation / cascading of outputs:

 Use a multi-pole switch with one switch contact for each power supply unit (1 x On); connection of the signal terminals with one switch contact is not permissible when being used in parallel operation

Additional control features with parallel operation:

#### Unit turns on:

 positive voltage (4...30V) is applied to 'Remote Shutdown 1' against negative output voltage

#### Unit switches off:

0...0.5V<sub>in</sub> is applied to 'Remote Shutdown 1'

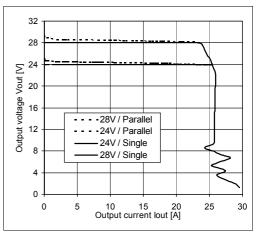

#### Note:

- Connection of the terminals 'Remote Shutdown 1' is possible with parallel operation; do not use the terminals 'Remote Shutdown 2'
- Only connect the signalling lines at one single point of the negative output voltage; a voltage drop between the connection point and the minus terminals must not exceed 0.5V, even at maximum load!

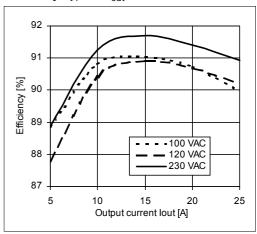

Additional data regarding remote shut-down:

Output current < 5mA (mean)</li>
 Power consumption <2.5W</li>
 Residual voltage at zero load <3V</li>
 Startup delay <500ms</li>
 Switching operations per min. <10</li>

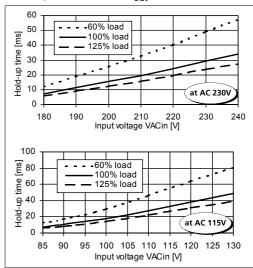

#### Output characteristic (typ.)

#### Efficiency (typ., at V<sub>out</sub>=24V)

#### Hold-up time (min., at V<sub>out</sub>=24V)

Unless otherwise stated, specifications are valid for AC 230V input voltage, +25°C ambient temperature, and 5 min. run-in time. They are subject to change without prior notice.

# **Mechanics**

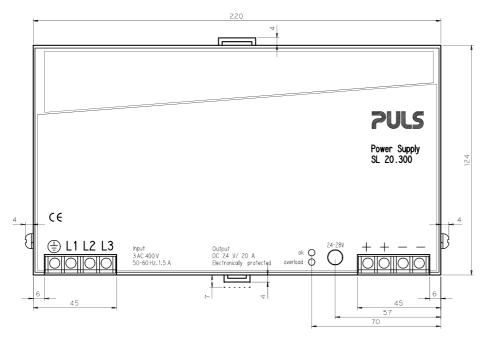

# **SL20**

- Innovative DIN-Rail mount, unit holds even at vibration or lateral pressure
- Clearly arranged and user oriented
- Large, robust screw terminals
- Sealed metal housing
- · Fine ventilating grid

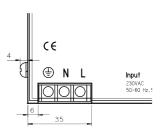

# Front view SL20.300

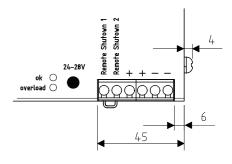

Data sheet

# Input terminals SL20.1xx

# Output terminals SL20.115

## **Construction / Mechanics**

Housing dimensions and Weight

• W x H x D 220 mm x 124 mm x 102 mm (+ DIN rail)

 Free space for above/below 70 mm recommended ventilation left/right 25 mm recommended

• Weight 1.5 kg (SL20.100) / 1.8 kg (SL20.110, SL20.300) 2.5 kg (SL20.111, SL20.115)

Robust metal housing with

fine ventilat. grid ( $\diamondsuit$  3,5 mm, IP20), to keep out small parts (e.g. screws)

Mounting

on DIN-Rail (TS35/7.5 or TS35/15, 1...1.5 mm thick) therefore

- Simple snap-on system
- Sits safely and firmly on the DIN-Rail
- No tools required to remove

or backplane-mounted

(two optional screw mounting sets SLZ01 required)

# **Connections**

Connections

Input/Output

Current handling capacity

• Grid

Screw terminals, connector size range: solid 0.5-6 mm<sup>2</sup> / flexible 0.5 - 4 mm<sup>2</sup>

30 A per output

Two connectors per output, 9 mm (SL20.115: 6 mm) distance between adjacent connectors

Design advantages:

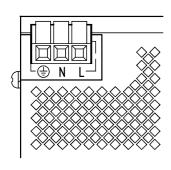

- All connection blocks are easy to reach as mounted at the front panel.
   Input/output strictly apart from each other, thus no mixing up
- PVC insulated cable can be used for all connections, no thermal protection is needed
