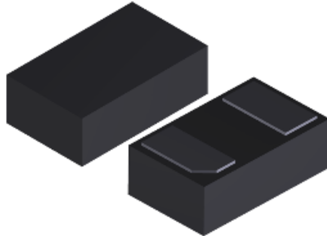
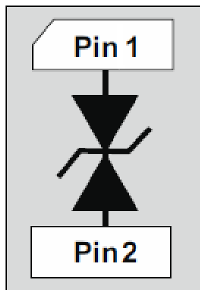
ESDALC5-1BT2Y

Datasheet

Automotive single line low capacitance Transil, transient surge voltage suppressor (TVS) for ESD protection in SOD882T

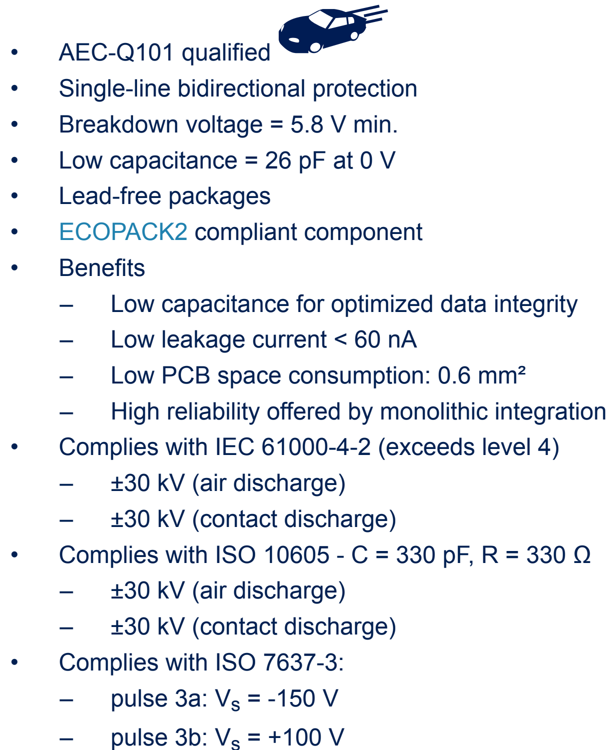


SOD882T(0402)
(QFN-2L 1.0 x 0.6 x 0.35)



Product status link
ESDALC5-1BT2Y

Features



- AEC-Q101 qualified
- Single-line bidirectional protection
- Breakdown voltage = 5.8 V min.
- Low capacitance = 26 pF at 0 V
- Lead-free packages
- ECOPACK2 compliant component
- Benefits
  - Low capacitance for optimized data integrity
  - Low leakage current < 60 nA
  - Low PCB space consumption: 0.6 mm²
  - High reliability offered by monolithic integration
- Complies with IEC 61000-4-2 (exceeds level 4)
  - ±30 kV (air discharge)
  - ±30 kV (contact discharge)
- Complies with ISO 10605 - C = 330 pF, R = 330 Ω
  - ±30 kV (air discharge)
  - ±30 kV (contact discharge)
- Complies with ISO 7637-3:
  - pulse 3a: V_S = -150 V
  - pulse 3b: V_S = +100 V

Application

Where transient overvoltage protection in ESD sensitive equipment is required, such as:

- Automotive applications
- Computers
- Printers
- Communication systems
- Cellular phone handsets and accessories
- Video equipment

Description

The ESDALC5-1BT2Y is bidirectional single-line TVS diode designed to protect data lines or other I/O ports against ESD transients.

This device is ideal for applications where both printed circuit board space and power absorption capability are required.

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

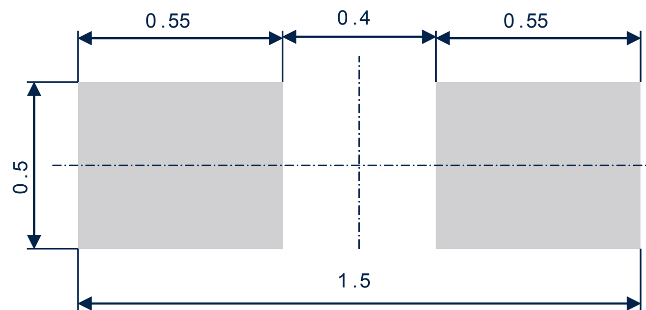
3 Recommendations on PCB assembly

3.1 Footprint

SMD footprint design is recommended.

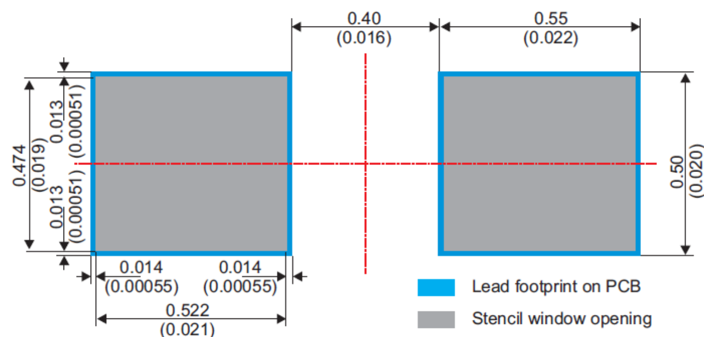
Figure 22. **SOD882T recommended footprint**



3.2 Stencil opening design

Stencil opening thickness: 100 µm

Figure 23. **Stencil opening recommendations**



3.3 Solder paste

1. Halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Solder paste with fine particles: powder particle size is 20-45 µm.

3.4 Placement

1. Manual positioning is not recommended.

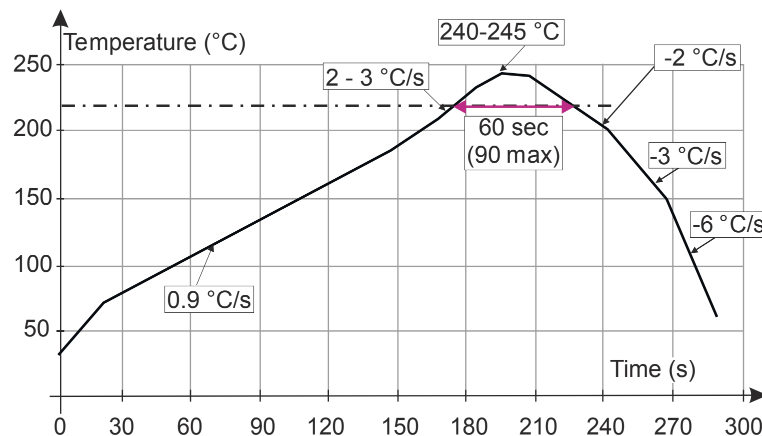
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.
3. Standard tolerance of ± 0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.5 PCB design preference

1. Any via around or inside the footprint area must be closed to avoid solderpaste migration in the via.
2. Position and dimensions of the tracks should be well balanced. A symmetrical layout is recommended to prevent assembly troubles.

3.6 Reflow profile

Figure 24. ST ECOPACK recommended soldering reflow profile for PCB mounting



Note: Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
