Reflow Profile

■ Reflow Temp/Time

NOTES:

1. We recommend the reflow temperature $245^{\circ}\text{C} (\pm 5^{\circ}\text{C})$. the maximum soldering temperature should be limited to 260°C .
2. dont cause stress to the epoxy resin while it is exposed to high temperature.
3. Number of reflow process shall be 2 times or less.

■ Soldering iron

Basic spec is $\leq 5\text{sec}$ when 260°C . If temperature is higher, time should be shorter ($+10^{\circ}\text{C} \rightarrow -1\text{sec}$). Power dissipation of iron should be smaller than 20W, and temperatures should be controllable. Surface temperature of the device should be under 230°C .

■ Rework

1. Customer must finish rework within 5 sec under 260°C .
2. The head of iron can not touch copper foil
3. Twin-head type is preferred.

■ Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow 、 solder etc.

Test circuit and handling precautions

■ Test circuit

■ Handling precautions

1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Shelf life in sealed bag: 12 month at $5^{\circ}\text{C}\sim 30^{\circ}\text{C}$ and $< 60\%$ R.H;

3. After the package is Opened:

3.1. It is recommended to baking before the first use:

Baking condition:

a. $60\pm 5^{\circ}\text{C}$ x (24~48hrs) and $< 5\%$ RH, taped reel type ;

b. $110\pm 5^{\circ}\text{C}$ x (8~16hr), bulk type ;

3.2. The products should be used within a week and to be stored at $\leq 20\%$ R.H. with zip-lock sealed:

a. Baking is required before soldering when the pack is unsealed after 24hrs ;

b. Baking condition as 3.1 baking condition.
