

ILLUMRA Slide Dimmer

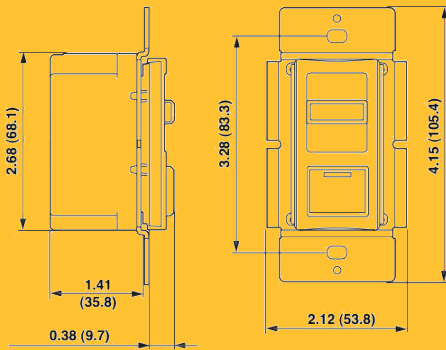

NWO-IP710

This wired dimming slider switch is offered as an accessory for customers who need a traditional wired switch solution to dim a light. The switch features a dimming slider and a standard ON/OFF button.

It can also be used in conjunction with an Area Controller or a Constant Voltage LED Dimming Controller to be integrated into a wireless control system with Wireless Light Switches. When used in conjunction with a Wireless Light Switch, the light level follows the behavior of the most recently received control signal, or with the Wired 0-10V Dimming Control Slider functioning as an override control.

This switch includes White, Ivory, and Light Almond Color Kits to match any room's color scheme. The wall plate is sold separately.
