

# SARA-R4 series

## LTE-M/NB-IoT/EGPRS modules with Secure Cloud

### Built-in foundation and end-to-end security with root of trust

- Always and everywhere location, integrated u-blox M8 GNSS receiver and CellLocate®
- Software-based configurability within each hardware design
- Simultaneous LTE communication with GNSS positioning
- Guaranteed best coverage with 23dBm output power
- Future-proof solutions via LwM2M and uFOTA

### Product description

The SARA-R4 series modules are ideal for mission-critical IoT solutions, as they include a unique and immutable root-of-trust. They support IoT Security-as-a-Service and provide the foundation for a trusted set of advanced security functionalities. The scalable, pre-shared key management system offers best-in-class data encryption and decryption, both on-device as well as from device-to-cloud. Utilizing the latest (D)TLS stack and cipher suites with hardware-based crypto acceleration provides robust, efficient and protected communication.

SARA-R422M8S is pre-integrated with the u-blox M8 GNSS receiver and separate GNSS antenna interface, which provides highly reliable, accurate positioning data simultaneously with LTE communication. In addition, the module offers unique hybrid positioning, in which the GNSS position is enhanced with u-blox CellLocate® data, providing location always and everywhere. Guaranteed best coverage is built in via 23dBm LTE output power, eliminating problems at cell edges and unwanted re-transmissions.

Customers can future-proof their solutions by means of the uFOTA client/server firmware updates, which utilizes LwM2M, a light and compact protocol ideal for IoT applications.

The ultra-compact 16 x 26 mm LGA modules offer the ability to make software-based configuration decisions for LTE bands, radio interface and system selection preference, as well as Mobile Network Operator within each hardware variant.

With many interface options and an integrated IP stack, the SARA-R4 modules are targeted to a wide range of data-centric IoT applications, such as smart metering, smart lighting, telematics, asset tracking, remote monitoring, alarm panels, and connected health. The SARA-R4 modules target long life, low-maintenance, cost-sensitive, lower power consumption, extended battery life applications.

Thanks to the u-blox nested design principle SARA modules are compatible with other u-blox product families, enabling easy migration from 2G, 3G and 4G. This maximizes the investments of customers, simplifies logistics, and enables very short time-to-market.

## Package

96 pin LGA: 16.0 x 26.0 x 2.5 mm, < 3 g

## Environmental data, quality & reliability

Operating temperature: -40 °C to +85 °C

RoHS compliant (lead-free)

Qualification according to ISO 16750

Manufactured in ISO/TS 16949 certified production sites

## Certifications and approvals – planned

SARA-R410M-63B GITEKI, Softbank, NTT DoCoMo

SARA-R410M-73B KC, SK Telecom

SARA-R410M-83B NCC, RCM, RED, Telstra
