

OH-CL-28-A

Ruland OH-CL-28-A, 1 3/4" Shaft Collar With OD Holes, 2024 Aluminum, One-Piece Clamp Style, 2 3/4" OD, 0.688" Width

Description Ruland OH-CL-28-A is a one-piece shaft collar with a 1.7500" bore, 2 3/4" OD, and 0.688" width. It has OD flats and tapped holes for mounting shaft collars to each other or adjacent components. The clamp style design does not mar the shaft, is easy to remove, and is indefinitely adjustable. OH-CL-28-A is commonly used for guiding, spacing, stopping, mounting, and component alignment. Equipment manufacturers benefit from the tightly controlled face to bore perpendicularity (TIR of ? .002"). Perpendicularity is critical for alignment when the shaft collar is used as a load bearing face, mechanical stop, or for mounting components such as gears or bearings. Proprietary processes have been developed by Ruland to maintain superior fit, finish, and holding power. OH-CL-28-A is stamped with the Ruland name and bore size for ease of identification. Forged screws test beyond ANSI standards to ensure maximum holding power. OH-CL-28-A is manufactured from solid bar stock sourced from select North American mills and machined to a fine burr free finish. Ruland uses high grade 2024 aluminum for increased screw seating torque. OH-CL-28-A is RoHS3 and REACH compliant and manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Product Specifications

1.7500 in	Bore Tolerance	+0.0020 in / +0.0005 in
2 3/4 in	Clearance Diameter (C) MAX	3.046 in
0.688 in	Width Tolerance	+0.003 in / -0.010 in
5/16-24	Through to Bore TB	0.50 in
+0.0000 in / -0.0005 in	Forged Clamp Screw	5/16-24
Alloy Steel	Hex Wrench Size	1/4 in
Black Oxide	Seating Torque	325 lb-in
1.125 in	Number of Screws	1 ea
2024-T351 Aluminum Bar	Temperature	-40°F to 225°F (-40°C to 107°C
Bright, No Plating	Manufacturer	Ruland Manufacturing
USA	Weight (Ibs)	0.241400
634529220399	Tariff Code	8483.60.8000

Installation Instructions

- 1. Use the OH-CL-28-A one-piece shaft collar as it is received.
- 2. Wipe the bore clean.
- 3. Apply a thin coat of light oil to the shaft.
- 4. Place the collar onto the desired shaft location and tighten it using a 1/4 in hex wrench until a slight resistance is felt.
- 5. Wring collar into its final position and tighten the screw to the full recommended seating torque of 325 lb-in using a 1/4 in torque wrench.
