

# 20MHz to 134MHz Spread-Spectrum Clock Modulator for LCD Panels

## General Description

The DS1081L is a spread-spectrum clock modulator IC that reduces EMI in high clock-frequency-based, digital electronic equipment.

Using an integrated phase-locked loop (PLL), the DS1081L accepts an input clock signal in the range of 20MHz to 134MHz and delivers a spread-spectrum modulated output clock signal. The PLL modulates, or dithers, the output clock about the center input frequency at a pin-selectable magnitude and dither rate, allowing direct EMI control and optimization. In addition, through an enable pin the dithering can be enabled or disabled for easy comparison of system performance during EMI testing. This same input pin also allows the DS1081L output to be three-stated.

By dithering the system clock, all the address, data, and timing signals generated from this signal are also dithered so that the measured EMI at the fundamental and harmonic frequencies is greatly reduced. This is accomplished without changing clock rise/fall times or adding the space, weight, design time, and cost associated with mechanical shielding.

The DS1081L is provided in an 8-pin TSSOP package and operates over a full automotive temperature range of -40°C to +125°C.

## Applications

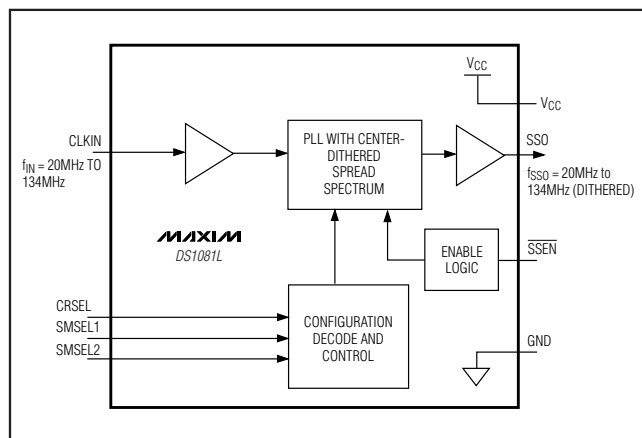

LCD Panels for TVs, Desktop Monitors, and Notebook and Tablet PCs

Automotive Telematics and Infotainment

Printers

Typical Operating Circuit appears at end of data sheet.

## Block Diagram

## Features

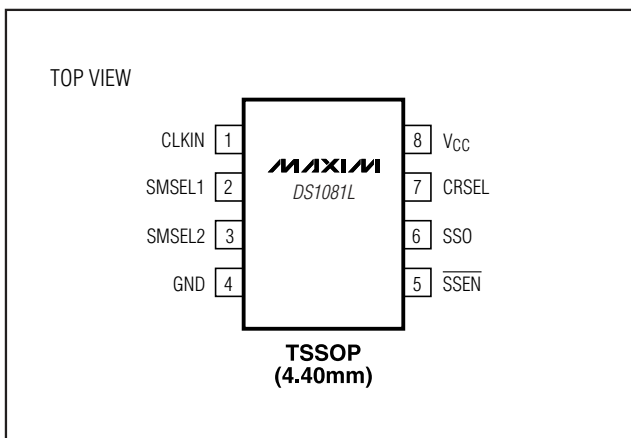

- ◆ Modulates a 20MHz to 134MHz Clock with Center Spread-Spectrum Dithering
- ◆ Selectable Spread-Spectrum Modulation Magnitudes of:
  - ±0.5%
  - ±1.0%
  - ±1.5%
  - ±2.0%
- ◆ Low 75ps Cycle-to-Cycle Jitter
- ◆ Spread-Spectrum Disable Mode
- ◆ Pin Compatible with Alliance/PulseCore Semiconductor P2040 Series Devices
- ◆ Clock Output Disable
- ◆ Low Power Consumption
- ◆ 3.3V Single Voltage Supply
- ◆ -40°C to +125°C Temperature Range
- ◆ Small 8-Pin TSSOP Package

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
DS1081LE+	-40°C to +125°C	8 TSSOP
DS1081LE+T	-40°C to +125°C	8 TSSOP

+ Denotes a lead (Pb)-free/RoHS-compliant package.  
T = Tape and reel.

## Pin Configuration

DS1081L

# 20MHz to 134MHz Spread-Spectrum Clock Modulator for LCD Panels

## ABSOLUTE MAXIMUM RATINGS

Voltage Range on V<sub>CC</sub> Relative to GND .....-0.5V to +3.63V  
 Voltage Range on Any Pin Relative to GND .....-0.5V to (V<sub>CC</sub> + 0.5V), not to exceed +3.63V  
 Operating Temperature Range .....-40°C to +125°C

Continuous Power Dissipation (T<sub>A</sub> = +70°C)  
 TSSOP (derate 8.1mW/°C above +70°C) .....646.7mW  
 Storage Temperature Range .....-55°C to +125°C  
 Lead Temperature (soldering, 10s) .....+300°C  
 Soldering Temperature (reflow) .....+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## RECOMMENDED OPERATING CONDITIONS

(T<sub>A</sub> = -40°C to +125°C, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage	V <sub>CC</sub>	(Note 1)	3.0		3.6	V
Input Logic 1	V <sub>IH</sub>		0.8 x V <sub>CC</sub>		V <sub>CC</sub> + 0.3	V
Input Logic 0	V <sub>IL</sub>		-0.3		0.2 x V <sub>CC</sub>	V
Input Logic Open ( $\overline{\text{SSEN}}$ , CRSEL)	I <sub>OPEN</sub>	0V < (Voltage applied to $\overline{\text{SSEN}}$ or CRSEL) < V <sub>CC</sub>			±1	μA
SSO Load	C <sub>L</sub>	SSO < 80MHz			15	pF
		80MHz ≤ SSO < 134MHz			7	
CLKIN Frequency	f <sub>IN</sub>		20		134	MHz
CLKIN Duty Cycle	f <sub>INDC</sub>		40		60	%

## DC ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = +3.0V to +3.6V, T<sub>A</sub> = -40°C to +125°C, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Current	I <sub>CC</sub>	C <sub>L</sub> = 7pF f <sub>IN</sub> = 134MHz			15	mA
SMSSEL1/SMSSEL2/CLKIN Input Leakage	I <sub>IL:1</sub>	0V < V <sub>IN</sub> < V <sub>CC</sub>	-1		+1	μA
CRSEL/ $\overline{\text{SSEN}}$ Input Leakage	I <sub>IL:2</sub>	0V < V <sub>IN</sub> < V <sub>CC</sub>	-100		+100	μA
Output Leakage (SSO)	I <sub>OZ</sub>	$\overline{\text{SSEN}}$ = open	-1		+1	μA
Low-Level Output Voltage (SSO)	V <sub>OL</sub>	I <sub>OL</sub> = 4mA			0.4	V
High-Level Output Voltage (SSO)	V <sub>OH</sub>	I <sub>OH</sub> = -4mA	2.4			V

## AC ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = +3.0V to +3.6V, T<sub>A</sub> = -40°C to +125°C, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
SSO Duty Cycle	f <sub>SSODC</sub>	Measured at V <sub>CC</sub> /2	40		60	%
SSO Rise Time	t <sub>R</sub>	C <sub>L</sub> = 7pF		1		ns
SSO Fall Time	t <sub>F</sub>	C <sub>L</sub> = 7pF		1		ns
Peak Cycle-to-Cycle Jitter	t <sub>J</sub>	T <sub>A</sub> = -40°C to +85°C, 10,000 cycles		75		ps
Power-Up Time	t <sub>POR</sub>	(Note 2)			50	ms

**Note 1:** All voltages referenced to ground. Currents into the IC are positive and out of the IC are negative.

**Note 2:** Time between power applied to device and stable output.

1	20MHz to 38MHz	$f_{IN}/512$													
8	VCC	Supply Voltage													

### Detailed Description

The DS1081L modulates an input clock to generate a center-dithered spread-spectrum output. A 20MHz to 134MHz clock is applied to the CLKIN pin. An internal PLL dithers the output clock about its center frequency at a user-selectable magnitude.

#### Spread-Spectrum Dither Magnitude

The DS1081L can generate dither magnitudes up to  $\pm 2\%$ . The desired magnitude is selected using input pins SMSEL1 and SMSEL2 as shown in Table 1.

**Table 1. Spread-Spectrum Dither Magnitude**

SMSEL2	SMSEL1	MAGNITUDE
0	0	$\pm 2.0\%$
0	1	$\pm 1.5\%$
1	0	$\pm 1.0\%$
1	1	$\pm 0.5\%$

#### Spread-Spectrum Dither Rate

The output spread-spectrum dither rate is determined by the input frequency to maximize EMI reduction and to ensure that the dither rate is always above the audio frequency range. The user must configure CRSEL, based on Table 2, depending on the input frequency ( $f_{IN}$ ) so that the appropriate dither rate is programmed.

**Table 2. Spread-Spectrum Dither Rate**

CRSEL	CLKIN RANGE	DITHER RATE
0	66MHz to 134MHz	$f_{IN}/2048$
Open	33MHz to 80MHz	$f_{IN}/1024$
1	20MHz to 38MHz	$f_{IN}/512$

# 20MHz to 134MHz Spread-Spectrum Clock Modulator for LCD Panels

DS1081L

## Spread-Spectrum Enable

On power-up, the output clock (SSO) remains three-stated until the internal PLL reaches a stable frequency. The  $\overline{\text{SSEN}}$  input can be used to disable the spread-spectrum modulation and to three-state the SSO output. If the  $\overline{\text{SSEN}}$  pin is pulled high, the spread-spectrum modulation is turned off, but the device still uses the internal PLL to generate the clock signal at SSO. If the  $\overline{\text{SSEN}}$  pin is open, the output is three-stated.

## Applications Information

### Power-Supply Decoupling

To achieve best results, it is highly recommended that a decoupling capacitor is used on the IC power-supply pins. Typical values of decoupling capacitors are 0.01 $\mu\text{F}$  and 0.1 $\mu\text{F}$ . Use a high-quality, ceramic, surface-mount capacitor, and mount it as close as possible to the  $V_{\text{CC}}$  and GND pins of the IC to minimize lead inductance.
