Functional Diagram

General Description

The HMC935LP5E is an Analog Phase Shifter which is controlled via an analog control voltage from 0.5 to +11V. The HMC935LP5E provides a continuously variable phase shift of 0 to 180 degrees from 2 to 20 GHz, with extremely consistent low insertion loss versus phase shift and frequency. The high accuracy HMC935LP5E is monotonic with respect to control voltage and features a typical low phase error of +20/-8 degrees. The HMC935LP5E is housed in an RoHS compliant 5 x 5 mm QFN leadless package.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1 - 4, 7 - 13, 15 - 18, 21 - 32	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.	
5, 20	GND	Ground: Backside of package has exposed metal ground slug that must be connected to ground thru a short path. Vias under the device are required.	
6	RFIN	This pin is AC coupled and matched to 50 Ohms.	
19	RFOUT	This pin is AC coupled and matched to 50 Ohms.	
14	Vctl	Phase shift control pin. Application of a voltage between 0.5 and 11 volts causes the transmission phase to change. The DC equivalent circuit is a series connected diode and resistor.

[2] Circuit Board Material: Rogers 4350 or Arlon 25 FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
