General Description

This display module is a transmissive type color active matrix TFT(Thin Film Transistor liquid crystal display (LCD that uses amorphous silicon TFT as a switching device. This module is composed of a TFT LCD module, a driver circuit, and a back-light unit. The resolution of a 0.96" contains 80(RGB)X160 dots and can display up to 65k colors.

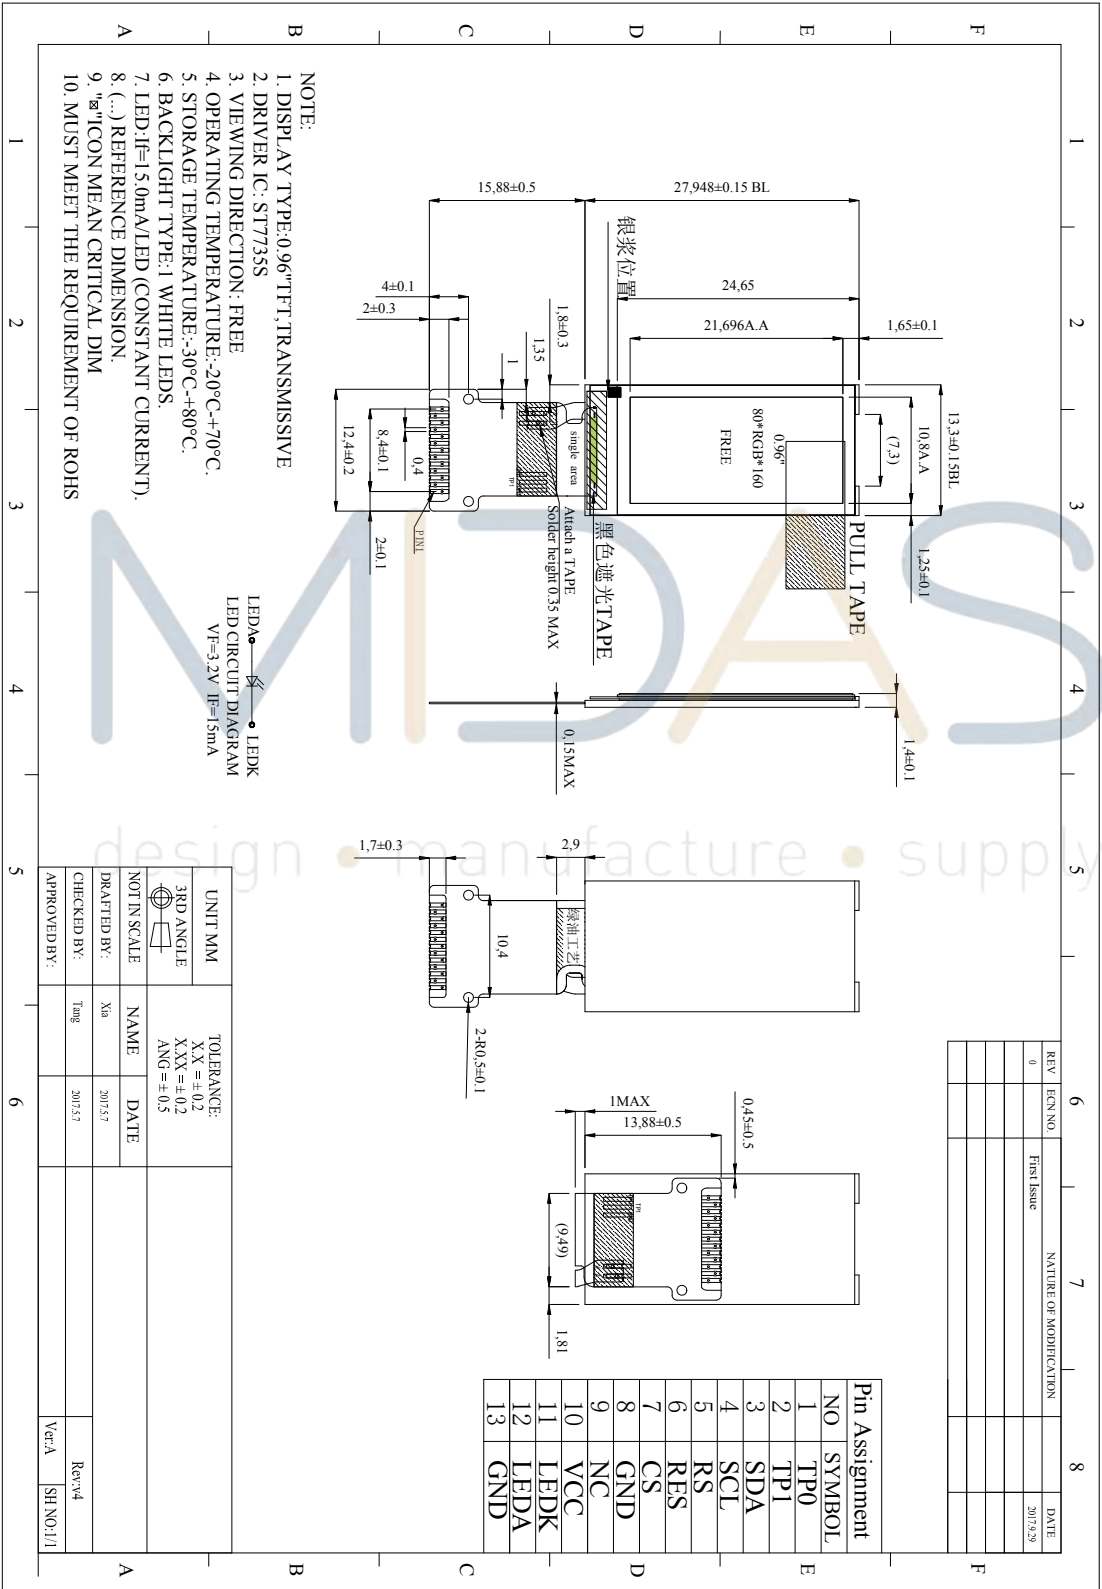

Module Parameter

Features	Details	Unit
Display Size(Diagonal)	0.96	inch
LCD type	α -Si TFT	-
Display Mode	IPS / Transmissive / Normally Black	-
Resolution	80RGB x 160	-
View Direction	All	Best image
Module Outline	13.3(H) × 27.948(V) × 1.4(T) (Note 1)	mm
TP Outline	N/A	mm
TP Viewing Area	N/A	mm
TP Active Area	N/A	mm
Active Area	10.80 (H) × 21.70(V)	mm
Viewing Area	N/A	mm
Display Colors	65K	-
Interface	4-SPI	-
Driver IC	ST7735S	-
Operating Temperature	-20 ~ 70	°C
Storage Temperature	-30 ~ 80	°C
Weight	TBD	g

Note 1: Excluding hooks, posts, FPC/FPC tail etc.

Module Interface

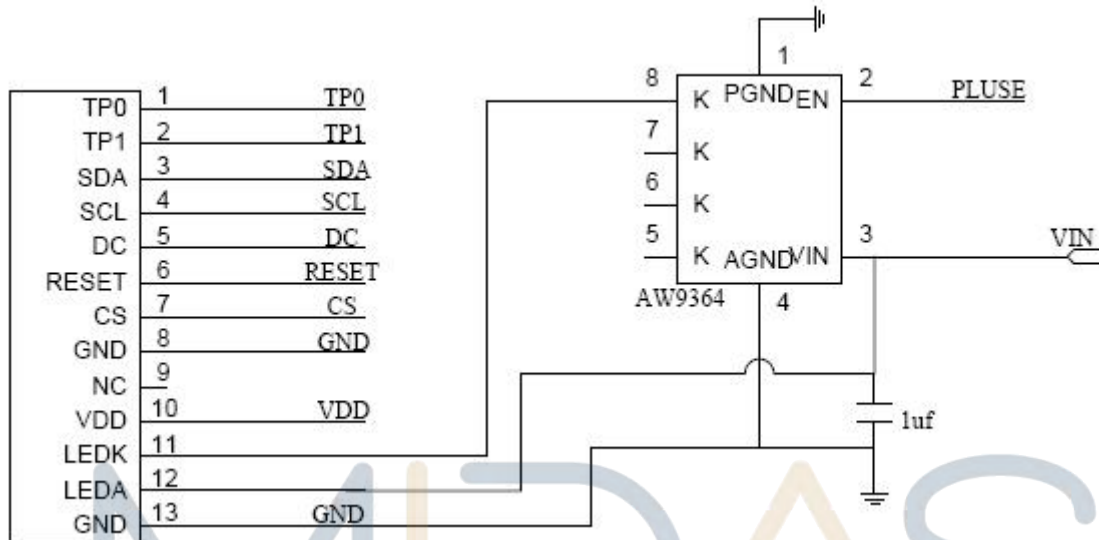

NO	SYMBOL	FUNCTION
1	TP0	Touch Pin, If not used, please open this pin.
2	TP1	Touch Pin ,If not used, please open this pin.
3	SDA	SPI interface input/output pin. The data is latched on the rising edge of the SCL signal.
4	SCL	This pin is used to be serial interface clock.
5	D/C	Display data/command selection pin in 4-line serial interface.
6	RESET	This signal will reset the device and it must be applied to properly initialize the chip. Signal is active low.
7	CS	Chip selection pin; Low enable, High disable.
8	GND	Power Ground
9	NC	No Connect
10	VDD	Power Supply for Analog, VDD=2.5V~3.3V.
11	LEDK	LED Cathode
12	LEDA	LED Anode
13	GND	Power Ground

Application Circuit

4-Line SPI Interface

Note1: $V_{IN}=2.8V\sim 5.5V$.

Note2: EN pin signal control AW9364 working condition. When the EN pin signal is converted to high power, and the chip begins to work normally make it. AW9364 built-in shutdown delay circuit when EN pins letter switch from high level to low power and low level The delay of the shutdown of the chip is less than that of the die adjust the effect of LED output current size. When EN pins low electricity maintain time of more than 2ms, chip into shutdown mode.

Backlight recommended circuit

Motherboard driver backlight is need constant current circuit, if the rated voltage screen after light brightness difference. Current and power consumption of the machine are inconsistent, so recommend a backlight driving circuit is best rated current. It is recommended to use IC (AW9364). The reference circuit is as follows:

Note: constant current circuit for every LED, and though LED lamp current is less than 20mA. Recommend between 15mA and 20 mA for every LED.

2. Definition of Response Time

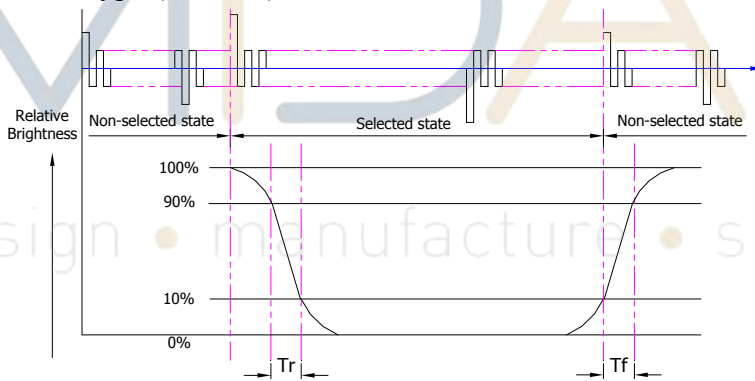

2.1 Normally Black Type (Negative)

T_r is the time it takes to change from non-selected state with relative luminance 10% to selected state with relative luminance 90%;

T_f is the time it takes to change from selected state with relative luminance 90% to non-selected state with relative luminance 10%.

2.2 Normally White Type (Positive)

T_r is the time it takes to change from non-selected state with relative luminance 90% to selected state with relative luminance 10%;

T_f is the time it takes to change from selected state with relative luminance 10% to non-selected state with relative luminance 90%;

3. Definition of Contrast Ratio

Contrast is measured perpendicular to display surface in reflective and transmissive mode. The measurement condition is:

Measuring Equipment	BM-7 or EQUI
Measuring Point Diameter	3mm//1mm
Measuring Point Location	Active Area centre point
Test pattern	A: All Pixels white
	B: All Pixel black
Contrast setting	Maximum

Definitions: CR (Contrast) = Luminance of White Pixel / Luminance of Black Pixel

4. Definition of Viewing Angles

Measuring machine: LCD-5100 or EQUI

5. Definition of Color Appearance

R,G,B and W are defined by (x, y) on the IE chromaticity diagram

NTSC = area of RGB triangle / area of NTSC triangle X 100%

Measuring picture: Red, Green, Blue and White (Measuring machine: BM-7)

6. Definition of Surface Luminance, Uniformity and Transmittance

Using the transmissive mode measurement approach, measure the white screen luminance of the display panel and backlight.

6.1 Surface Luminance: $LV = \text{average} (LP1:LP9)$

6.2 Uniformity = $\text{Minimal} (LP1:LP9) / \text{Maximal} (LP1:LP9) * 100\%$

6.3 Transmittance = $LV \text{ on LCD} / LV \text{ on Backlight} * 100\%$

Note :Measuring machine:BM-7

Quality Assurance

1. Purpose

This standard for Quality Assurance assures the quality of LCD module products supplied to customer by Midas display.

2. Agreement Items

Midas and customer shall negotiate if the following situation occurs:

- 2.1 Additional requirement to be added in product specification.
- 2.3 Any other special problem.

3. Standard of the Product Visual Inspection

3.1 Appearance inspection:

3.1.1 The inspection must be under illumination about 1000 – 1500 lx, and the distance of view must be at $30\text{cm} \pm 2\text{cm}$.

3.1.2 The viewing angle should be 45° from the vertical line without reflection light or follows customer's viewing angle specifications.

3.1.3 Definition of area: A Zone: Active Area, B Zone: Viewing Area.

3.2 Basic principle: A set of sample to indicate the limit of acceptable quality level must be discussed by both Midas and customer when there is any dispute happened.

4. Inspection Specification

Sampling plan according to GB/T2828.1-2012/ISO 2859-1: 1999 and ANSI/ASQC

Z1.4-1993,normal level 2 and based on:

Major defect: AQL 0.65

Minor defect: AQL 1.5

Remark: 1. A pixel defect is acceptable if one color is none functional and causes a bright dot. The display may have one case where one color is out and cause a dark dot. 2. Bright dot caused by scratch and foreign object accords to item1.

Remark: Visual and cosmetic defects are rejectable only if these fall within the LCD viewing area.

5. Classification of Defects

Visual defects (Except no / wrong label are treated as minor defect and electrical defect is major.

6. Identification/marketing criteria

Any unit with illegible / wrong /double or no marking/ label shall be rejected.

7. Packing

7.1 There should be no damage of the outside carton box, each packaging box should has label in the correct location per packing drawing requirement.

7.2 All direct package materials shall offer ESD protection.

Reliability Specification

Note 1. For humidity test, DI water should be used.

Inspection Standard: Inspect after 1-2hrs storage at room temperature, the sample shall be free from the following defects:

- Air bubble in the LCD
- Seal Leakage
- Non-display
- Missing Segment
- Glass Crack
- IDD is greater than twice initial value.
- Others as per QA Inspection Criteria

Note 2. No defect is allowed after testing

The End Product ESD value is only indicative and depends on customer ESD

protection design for the whole system.

Note 3. ESD should be applied to LCD glass panel, not other areas (such as on IC and so on) IDD should be within twice initial value.

In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.

Note 4. Only upon request.

Precautions and Warranty

1. Safety

1.1 The liquid crystal in the LCD is poisonous. Do not put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

1.2 Since the liquid crystal cells are made of glass, do not apply strong impact on them.

Handle with care.

2. Handling

2.1 Reverse and use within ratings in order to keep performance and prevent damage.

2.2 Do not wipe the polarizer with dry cloth, as it might cause scratch. If the surface of the LCD needs to be cleaned, wipe it swiftly with cotton or other soft cloth soaked with petroleum IPA, do not use other chemicals.

3. Operation

3.1 Do not drive LCD with DC voltage

3.2 Response time will increase below lower temperature

3.3 Display may change color with different temperature

3.4 Mechanical disturbance during operation, such as pressing on the display area, may cause the segments to appear “fractured”.

4. Static Electricity

4.1 CMOS LSIs are equipped in this unit, so care must be taken to avoid the electro-static charge, by ground human body, etc.

4.2 The normal static prevention measures should be observed for work clothes and benches.

4.3 The module should be kept into anti-static bags or other containers resistant to static for storage.

5. Limited Warranty

5.1 Unless otherwise agreed between Midas and customer, Midas will replace or repair any of its LCD and LCM which Midas found to be defective electrically and visually when inspected in accordance with Midas Quality Standards, for a period of one year from date of shipment.

5.2 The warranty liability of Midas is limited to repair and/or replacement. Midas will not be responsible for any consequential loss.

5.3 If possible, we suggest you use up all modules in six months. If the module storage time over twelve months, we suggest that recheck it before the module be used.

Prior Consult Matter

1. For Midas standard products, we keep the right to change material, process for improving the product property without prior notice to our customer.

2. For OEM products, if any changes are needed which may affect the product property, we will consult with our customer in advance.

3. If you have special requirement about reliability condition, please let us know before you start the test on our samples.
