Order Number 63808-2500

### **FEATURES**

- Applicator designed to industry-standard mounting and 135.80mm (5.346") shut height
- Quick setup time; plus, the crimp height, track and feed adjustments can be set without removing the applicator from the press
- Fine adjustment allows users to achieve target with little effort by adjusting in increments of .015mm (.0006") for conductor crimp height and .025mm (.001") for insulation height
- Fine adjustment of the bend is achieved using the bend control adjust dial
- Independent adjustment rings allow users to quickly adjust the conductor or insulation crimp height without affecting each other
- Directly adapts to most automatic wire processing machines

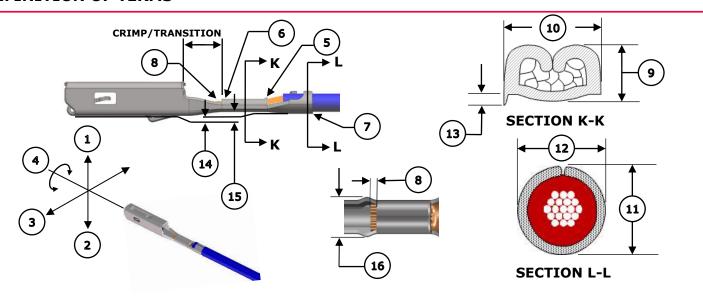

#### SCOPE

**Products:** MX150 & MX150 Gen 2.0 ISO (M3) Receptacle Terminals: 0.35mm<sup>2</sup> and 0.50mm<sup>2</sup> type ISO wire.

# **DEFINITION OF TERMS**

# **CRIMP SPECIFICATIONS**

The following crimp specifications are based on documents AS-33012-002 Rev. F (MX150) and 2037704320-AS Rev. B (MX150 Gen 2.0):

Feature	Requireme	ent						
1. Bend Up	1.5° Max							
2. Bend Down	1.5° Max							
3. Twist	3° Max							
4. Roll	3° Max							
5. Rear Bell Mouth	0.30-0.70mm (.012028")							
6. Front Bell Mouth	Not Applicable							
7. Cut-Off Tab	0.50mm (.020") Max, no burr							
8. Conductor Brush	0.40mm (.016") Max, not to extend above conductor crimp/transition height							
	Wire Type		Wire Size	9. Crimp Height		10. Crimp Width

#### **NOTES**

#### **Applicator Notes**

- This applicator is for automatic wire processor use only.
- This applicator does not include a cutting insert.
- Installing a cutting insert will cause jamming in this applicator.

# **Specification Notes**

• It is very important that the brush length is consistently within specification for this sealed connector system to work properly.

**CUTTING INSERT** 

• This applicator should only be run in a properly set up wire processor to consistently achieve the brush length.

#### **General Notes**

- 1. Molex recommends that an extra perishable tooling kit be maintained at your facility.
- 2. Verify tooling alignment by hand cycling the press and applicator before crimping under power. Check that all screws are tight.
- 3. Slugs, terminals, dirt and oil should be kept clear of the work area.
- 4. Wear safety glasses at all times.
- 5. For recommended maintenance, refer to the FA2 manual (TM-638080200).
- 6. Molex recommends crimping stranded copper wire only.
- 7. Lubrication must be used when crimping gold and select gold terminals to prevent terminals from sticking in the conductor punch. Use 63801-7240 oiler or equivalent.

## **WARNINGS**

**CAUTION:** This applicator must be installed in a press with a standard shut height of 135.80mm (5.346"). Tooling damage could result at a lower setting.

**CAUTION:** To prevent injury, never operate this applicator without the guards supplied with the press or wire-processing machine in place. Reference the press or wire processing manufacturer's instruction manual.

**CAUTION:** Molex tooling crimp specifications are valid only when used with Molex terminals and tooling manufactured by Molex and sold by Molex or authorized distributors ("Molex Tooling"). When using tooling other than Molex Tooling with Molex-specific connector systems listed in our ATS documents, the Molex Tooling qualification does not apply, and the responsibility for full qualification of the connector system is that of the customer. Molex accepts no liability for connector performance or tooling support where tooling other than Molex Tooling is used or where Molex Tooling is modified.

### **FACTORY SETTINGS**

## **Feed Pawl Assembly**

The FA2 applicator number 63808-2500 ships with the following factory settings. See Figure 2:

- The feed pawl shaft and M3 set screw that holds the feed pawl spring are in position 3.
- The pin is in position B.

**Note:** Each applicator is configured and tested by Molex prior to shipping, and the above settings were used to produce the included sample crimps.

# Third Dial/Ram Assembly
