▼ Overview

We trialed many motors to include with our ELEV-8 V2 Quadcopter Kit, and the KA 20-20L won out as our favorite. We offer it here as a replacement part as needed, and it is also an ideal motor for any RC avionics project.

An electronic speed controller is required to control each motor independently.

Key Features:

- Screw-on propeller adapter provides a stable connection
- Efficient, low-noise motor provides a more enjoyable flight experience
- Compatible with ELEV-8 V2, V1, Hex Upgrade, and Y-8 multirotor hobby aircraft kits

Note: When purchasing replacement motors for multirotor hobby aircraft, it is important to use all of the same motors on the aircraft. Do not mix and match motor brands and styles when using the ELEV-8 quadcopter or its Hex and Y-6 variants.

Details

- Kv: 1050 rpm/V
- Battery: 11.4 V, 3S LiPo
- Current: 6-15 A
- Burst Current: 19 A for 15 sec
- Shaft: 3.17 mm x 12 mm
- Weight: 57 g
- Dimensions: 28 mm x 32 mm
