

Voltage comparator with strobe

Datasheet - production data

Description

The LM211, LM311 are voltage comparators that have low input currents.

They are also designed to operate over a wide range of supply voltages: from standard ± 15 V operational amplifier supplies down to the single +5 V supply used for IC logic.

Their output is compatible with RTL-DTL and TTL as well as MOS circuits and can switch voltages up to +50 V at output currents as high as 50 mA.

Features

- Maximum input current: 150 nA
- Maximum offset current: 20 nA
- Differential input voltage range: ± 30 V
- Power consumption: 135 mW at ± 15 V
- Supply voltage: +5 V to ± 15 V
- Output current: 50 mA

$V_{(1-4)}$	Ground to negative supply voltage	30	V
$V_{(7-4)}$	Output to negative supply voltage		
	LM211	50	V
	LM311	40	
	Output short-circuit duration	10	s
	Voltage at strobe pin	$V_{CC}^+ - 5$	V

1. This rating applies for $\pm 15V$ supplies. The positive input voltage limit is 30V above the negative. The negative input voltage is equal to the negative supply voltage or 30V below the positive supply, whichever is less.
2. P_d is calculated with $T_{amb} = +25^\circ\text{C}$, $T_j = +150^\circ\text{C}$ and $R_{thja} = 175^\circ\text{C/W}$ for the SO-8 package.

1. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single +5 V supply up to $\pm 15\text{ V}$ supplies. The offset voltages and offset currents given are the maximum values required to drive the output down to +1 V or up to +14 V with a 1 mA load current. Thus, these parameters define an error band and take into account the worst-case of voltage gain and input impedance.

2. The response time specified is for a 100 mV input step with 5 mV overdrive.
