TFT BOARD 5 RESISTIVE

TFT Board 5 Resistive is a 5" display board which features the standardized 2x20-pin display connector. The display board also integrates a resistive touch panel. The TFT display module supports up to 24-bit pixel format (RGB: 888) and resolution of 800 x 480 pixels. It features an excellent contrast ratio and uniform brightness. TFT Board 5 Resistive, along with other displays from the TFT Board Resistive line of products, is supported by VisualTFT, a software tool for simplified development of visually oriented embedded applications.

Display size	Resolution	Graphic controller	Touch Screen	Active area (mm)
5"	800x480px	SSD1963	Resistive	108 x 64.8
