

Heterojunction Bipolar Transistor Technology (InGaP HBT)

High Efficiency/Linearity Amplifier

The MMZ09332B is a 2-stage, high linearity InGaP HBT broadband amplifier designed for femtocell, picocell, smart grid, W-CDMA, TD-SCDMA and LTE wireless broadband applications. It provides exceptional linearity for LTE and W-CDMA air interfaces with an ACPR of -50 dBc at an output power of up to 23 dBm, covering frequencies from 130 to 1000 MHz. It operates from a supply voltage of 3 to 5 volts. The amplifier requires minimal external matching and offers state-of-the-art reliability, ruggedness, temperature stability and ESD performance.

FAILURE ANALYSIS

At this time, because of the physical characteristics of the part, failure analysis is limited to electrical signature analysis. In cases where Freescale is contractually obligated to perform failure analysis (FA) services, full FA may be performed by third party vendors with moderate success. For updates contact your local Freescale Sales Office.
