

LSM0805 Series

0805 SMD LED Package

2.0 x 1.25 x 0.8 mm SMD Chip LED

LSM0805543V White SMD LED. Low Profile Surface Mount LED with High intensity light output and low power consumption

Application

- Wearable and Portable Devices
- Automotive Features
- Navigations Systems
- Home and Smart Appliance
- Backlit Keypads
- Medical Devices
- Health Care Application
- Industrial Control Systems
- Status Indicator

Key Features

- 2.0 x 1.25 mm [.079 x .049 in] (0805package/2012 metric) Chip SMD LED
- 0.8 mm [.031 in] in thickness
- Low power consumption
- Rectangle flat top LED
- Wide viewing angle (110°)
- Optimized light coupling by inter reflector
- AlGaInP technology
- Top emitting package
- Small 0805 LED package, flexible application with small space required.
- Available in a range of colors: red, white, green, blue and yellow making it ideal for status indication
- Cost-efficient solution for low-power and compact electronic equipment designs
- Compatible with automatic placement equipment and available in automation-friendly tape and reel
- Ideal for special configurations for automated PC board assembly and space-sensitive applications
- Pb-free
- Moisture sensitivity level: 3
- Package 3,000 pieces per reel
- Compliant with RoHS and REACH

Ordering Data

Product Dimensions

Notes:

1. All dimensions are in mm [in]
2. Tolerance is ±0.1 mm unless otherwise noted

Product Specifications

Absolute Maximum Ratings (ta=25°C)

Items	Symbol	Ratings		Unit
Reverse Voltage	VR	5		V
Forward Current	If	W	25	mA
Operation Temperature	Topt	-40~+85		°C
Storage Temperature	Tstg	-40~+100		°C
Electrostatic Discharge (HBM)	ESD	W	2000	V
Power Dissipation	Pt	W	90	MW
Peak Forward Current (Duty 1/10 @1KHZ)	IFP	W	60	MA
Soldering Temperature	Tsol	Reflow Soldering: 260°C for 10 sec		

Parameter	Symbol		Min	Typ.	Max.	Unit	Condition
Luminous Intensity	Iv	W	--	280	--	mcd	IF=20mA
Color Temperature	Tc	Warm White	3800	--	4200	K	IF=20mA
		Pure White	6500	--	7500		
		Cool White	8000	--	12000	K	
Spectrum Radiation Bandwidth	$\Delta\lambda$	W	--	20	--	nm	IF=20mA
Forward Voltage	V _F	W	2.8	--	3.4	v	IF=20mA
Viewing Angle	2θ1/2		--	110	--	deg	IF=20mA
Reverse Current	I _R	W	--	--	5	uA	V _R =5V

Notes:

1. Tolerance of Luminous Intensity ±3%
2. Tolerance of Dominant Wavelength ±1nm
3. Tolerance of Forward Voltage ±0.03V

Reliability Data

The reliability of products shall be satisfied with items listed below. Confidence level: 90%

LTPD: 10%

No	Items	Test Condition	Test Hours/Cycles	Sample Size	Ac/Re
1	Reflow Soldering	Temp: 260±5°C	6 min	22 PCS	0/1
2	Temperature Cycle	H: +100°C 15 min ∫ 5 min L: -40°C 15 min	300 Cycles	22 PCS	0/1
3	Thermal Shock	H: +100°C 5 min ∫ 10 sec L: -10°C 5 min	300 Cycles	22 PCS	0/1
4	High Temperature Storage	Temp: 100°C	1000 Hrs	22 PCS	0/1
5	Low Temperature Storage	Temp:-40°C	1000 Hrs	22 PCS	0/1
6	DC Operating Life	IF=20mA	1000 Hrs	22 PCS	0/1
7	High Temperature High Humidity	85°C/85%RH	1000 Hrs	22 PCS	0/1

Recommended Reflow Soldering Profile

Reflow Soldering

Use the conditions shown in the figure below for PB-Free Reflow Soldering.

- Reflow soldering should not be done more than two times.
- Stress on the LEDs should be avoided during heating in soldering process.
- After soldering, do not handle the product before its temperature drops down to room temperature.

Precautions

• Storage

Moisture proof and anti-electrostatic package with moisture absorbent material are used, to keep moisture to a minimum.

Before opening the package, the product should be kept at 30°C or less and humidity less than 60%Rh, and be used within a year.

After opening the package, the product should be stored at 30°C or less and humidity less than 10%RH, and be soldered within 24 hours. It is recommended that the product be operated at the workshop condition of 30°C or less and humidity less than 60%RH.

If the moisture absorbent material has faded away or the LEDs have exceeded the storage time. Baking should be performed based on the following condition: (60+5C) for 12 hours

• Static Electricity

Static electricity or surge voltage damages the LEDs. Damaged LEDs will show some unusual characteristics such as the forward voltage becomes lower, or the LEDs do not light at the low current, even not light.

All devices, equipment, and machinery must be properly grounded. At the same time, it is recommended that wristbands or anti-electrostatic gloves, anti-electrostatic containers be used when dealing with the LEDs.

Circuit Design Notes

• Design Consideration

In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen.

It is recommended to use Circuit A which regulates the current flowing through each LED rather than Circuit B in forward Voltage (Vf) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the Absolute Maximum Rating

• Thermal Design

Is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color changed and so on. Please consider the heat generation of the LEDs when making the system design.
